Cable modems transmit in the SW spectrum, but there should
be very minimal signal leakage. If any leakage is noticed,
your provider would want to know about itand repair it
because it indicates potential problems with your service.

Hello, All!

If your IF radio can go down to 27 MHz, you'd be better of buying a 65 MHz rock (all of the major crystal suppliers have the formula). This will allow 222-225 coverage.

Retuning is negligible, and generally takes less than five minutes. Net the rock, pump RF into the front end, and tune the LO and mixer stage for maximum smoke. You shouldn't need to adjust the RF or IF stages at all.

Cheers!

Bill WA3RA / EI4VSH

From: David <k4zzrNONSPAM@gate.net>
Message-ID: <8v533g$12bm$1@news.gate.net>
Source record: 68808

Hello....

I just finished installing my mobile HF radio and it's working great. However, I'm getting a little bit of "hash" in the Icom 706mk2g coming from a pair of electric cooling fans in front of the engine of my 1998 Honda Accord. The fans are off most of the time when in motion, but they pop on and off fairly often when sitting idle. Does anyone have a recommendation on what I might do to filter these fans? Would ferrite beads on their cables do any good, or perhaps a .01mfd capacitor across the terminals?

Thanks for any advice,
David, K4ZZR

3970. Best HF band for emergencies?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-18 05:16:27 UTC
From: TR <w7trx@my-deja.com>
Message-ID: <8v53b8sta1@nnrp1.deja.com>
Source record: 68809

Greetings,

I live in Earthquake and volcano country and am considering my communication needs during a crisis. Both for personal use and to assist others as needed. It seems that 2m is probably the best single amateur band for emergencies. I have a 2m HT, small solar panel, and 14ah gel cell battery.

For Regional communications, HF would seem to be the way to go. My IC706G requires too much power for an extended crisis. I am considering picking up a small, single band, battery powered rig. I am new to the HF bands, but 40m and 80m seem to have the best characteristics for this purpose, since they are the primary bands for NVIS use. When I look to my reference books for more info, they mostly address the HF bands with respect to characteristics for DX use, not local/regional use.

I would like to know what are the typical day and night distance characteristics of 40m?

Typical day and night distances on 80m?

Do the ARES/RACES groups have a preference between these two bands? Do they have emergency nets on 40m or 80m?

Thanks for your input.

TR,
I'm not up on the ARES HF operations in general, most of our work here in Oklahoma is VHF, with some UHF thrown in. I understand they will utilize the nat. traffic nets as and when possible. You should check with your local EC (emergency coordinator) and determine where they normally operate on HF. It won't do you much good to be on the "best" band if all the others are on a different one. For instance, Oklahoma runs a Okla. Traffic and Weather Net Mon-Sat on 3900 Khz at 2300 hrs UTC. You might try the nat. ARES website www.ares.org and see if they have a link to your area.

You probably damaged the battery when you soldered leads to it. Either that
or the radio has another problem. The battery in a TM221 typically lasts
over 10 years.

Message-ID: <WSUR5.584$Bf7.189416960@news.frii.net>
Source record: 68703

A problem to be aware of :

Many of the TM-221 rigs have had a problem internal to the microprocessor. The internal fault causes the processor to draw excessive current from the back-up battery when the rig is not turned on. This makes the replacement battery very short lived.

If you normally keep the rig connected to a 12 volt source in the car or in the shack at home, the battery can be replaced by a 3 volt zener diode and an appropriate dropping resistor.

This will work to retain the memory stuff as long as the rig is connected to the 12 volt supply continuously.

73 and good luck

WA5VRL
Willis

>money for ham use?

Are you talking about the linear or switching Samlex supplies?

I have several of the Samlex linear supplies, and they are somewhat of
a mixed bag:

- A 5A supply had almost no heat sink grease used to install the power
transistor, so the transistor got quite hot at a fraction of the rated
output while the heat sink remained cool. Remounting the transistor
fixed this.

- All of them do nothing to prevent contact with the pass transistor
case, which is connected to the collector, which is connected to the
positive of the main filter capacitor. If you have grounded the negative
terminal of the supply and then any grounded metal touches the
transistor case, watch the fireworks. I put nylon covers on the pass
transistors

- A 7-10A supply used a single 2N3055 transistor on a small heat sink.
There's no way this would be able to dissipate the heat of running
continuously at 7 A. 10A frm a single 2N3055 is expecting a bit much
as well. I replaced them with a larger heat sink and a more conservatively
rated transistor.

- The 15-20A supply uses four 2N3055's in parallel as a pass device - much
more reasonable rating for each transistor. However, there are no
emitter resistors so the transistors don't share current equally.
The heat sink still looks marginal in size for 15 A continuous output,
though it has about 6 times the area of the heat sink in the 7A supply.

- Samlex claims that they have current limiting, but I can't see any
sign of anything (e.g. low-value resistor) used to measure current,
nor any way to adjust the current limit. I believe there is no
current limit. Nor is there any crowbar for overvoltage protection.

But they do provide regulated DC and they are cheap.

As for the switchers, they may be better built. I haven't used one,
but the layout and construction quality seems considerably better than

the linears, as if they came from a completely different factory.

Dave

There is no such thing as a "freeband". It's going to cost you in the end.
It could keep you from getting a ham ticket.

> It would be very appriciated !!
>
> ON4BAW, Phil

Hello Phil & others,

You will need to find a suitable DIN connector unless you want
to chop the old one off and later explain that to the cable company.

You will need to connect 3 wires.
Each computer is different but you should have some white four con-
ducter plugs not connected inside your computer that are intended for
connection to optional later added units such as floppy drives, tape drives
etc. Determine the pins that have the voltage you need.

Holding the DIN plug (one you need to buy or chop off) which is male so
the pins are oriented up and the indent is down (6 o'clock position)

The following pinout applies.(I reverified prior to writing)

9 o'clock pin is + 5 Vdc
next 10' o'clock pin is +12 Vdc
and the 3 o'clock pin is GND
(12 and 1 o'clock not used)
Also found the shell shield is not connected (did not connect mine)

Solder the pins up and find a way to route the cable out of your computer.
Another person responding to an earlier post of mine simply went to
an available serial plug on the rear of the computer and made the
connections there. Can't give details on this.

BTW my interference (80 mtrs) was intermittent data bursts that coincided
with the data going through my modem. Even when the computer was
unnattended and even turned off . I pulled the modem out prior to writing
this and listened on 75/80 mtrs. The hash was still evident with nothing
even connected to it except of course the wall receptacle. TOTAL JUNK !

Hope this helps you and 73's
Eddie Bryant

3989. Kenwood TS-440 manuall needed

Newsgroup: rec.radio.amateur.equipment

My aging uncle has just gifted me with a Kenwood TS-440SAT to replace my Yaesu FT-101 (since he moved to a small retirement apartment, he can't get an HF antenna up anywhere). The only problem is that he can't find the manual. Artsci's 'Lost User Manuals' doesn't cover the TS-440, and Kenwood doesn't have the manual available for download. Anybody out there got a spare?

Thanks,

George Van Wagner, KE6EPC

Look for the new Yaesu FT-817. This would be my choice as an emergency
radio, if power comsumption were a significant consideration. It's basicly a
QRP IC-706. Covers HF (all bands), 6,2 and 450, all modes.

Look here for info:

http://www.yaesu.com/amateur/ft817.html

I am cleaning out the Shack. I am open to trades and offers.
Things I'm interested in (but not limited to): Shortwave radios, Scanners,
VHF SSB Gear, HF Gear.

Kenwood TS-520 HF Radio
Cobra 142GTL Base CB
HTX - 202 2m Handheld
Utica 650 6m AM tube rig w/ VFO
HR-2600 10m Rig (Need alignment)
Antronn 99 10m/11m Vertical (w/ Ground Plane Elements)
Diamond X-300 2m/440 Dual Band Vertical (w/ Ground Plane Elements)
Moonraker 10m/11m 4 element Quagi (Switchable from horizontal to vertical
polarization)
Astron 70 Amp Metered Power Supply
Astron 25 Amp Metered Power Supply
Mirage 2m 160w Amplifier
Texas Star 500 10m/11m Amplifier four-transistor Amp (Needs Work)
120 watts Home- Built 10m/11m two-transistor Amp
Radio Shack Pro-64 Handheld Scanner
Bearcat 760xlt mobile
Turner Plus 3B Desk Mic
Turner Plus SuperSidekick
Kenwood MC-50 Desk Mic
PDC-700 Power Scanner 10m/11m (SWR,Mod,Power)
NDS TA-27 RF Pre-Amp w/ Variable Gain
Citizens Band Field Strength Meter
Regency HX 650 Scanner (Crystal Type)
R-390A/URR Military HF Receiver (GREAT! Condition)
RG-8,RG-8, and more RG-8

This is the Radio Equipment I am parting with:) All Equipment is in great
shape. If anything here interests you let
me know.

Well, you can always turn the RF output of the 706 series down to whatever you want, just as low as the 'QRP' radios if you wish. The real issue is standby current consumption. Anyone know how the IC-706 or FT-100 compares to the Yaesu FT-817 in this regard? If the standby/receive current draw is near the same, you might as well just get one of the higher powered radios (for when you have plenty of power available) and just turn down the RF out to 10 watts or so when you need to conserve power.

> body. You need to keep these clean.

If they are gold plated DON'T MESS WITH THEM unless you want some really horrendous problems. Gold doesn't tarnish but can be scraped off through excessive pressure on the contacts or use of contact cleaner not meant to be used on anything but tinned contacts.

If you have already scraped these or used an eraser on them, send the rig back to the repair site. Otherwise bend over in Yoga position holding backs of ankles with hands, place head between legs and kiss your fundament goodby.

Power Supply that came with my modem put out all
sorts of HF trash.
Manu: APS - advanced power solutions.
Model # is: AD-715U-2205
P/N is: 62479-03
Output is +5 Vdc @ 1 A
+12 Vdc @ 0.75 A

Tried the aluminum foil trick- no help
My solution:
Connect the Motorola Modem directly to my Computers
internal power supply.
Chunk the old power supply back into its box.

My Motorola modem was not the problem.
The cheap made in Taiwan switching power supply was.

In many cases I think you're right. Most of the glamour of the new rigs
are all the bells, whistles,screens, blinky things, etc. As far as the
basic abilty to receive an HF signal I honestly believe the cheapest
radio they make is nearly as good as the most expensive as long as you
have equal filters. You likely won't be able to hear someone on one that
you couldn't on the other. I think for a cw op, the filters used the
biggest thing, and just having a good antenna etc. Heck, a 765 no
slouch at all. Probably one of icoms better "big" rigs. I'd stick with
it as long as it keeps working. Maybe spend for a better filter if
needed. I would think the 765 ok as is. MK

Hello,
About 4 or 5 years ago I believe AEA came out with a ACARS adapter you hook to to the back of your computer to receive/decode ACARS. I am looking to buy one off of someone. Does anyone have a decoder for ACARS? AEA unit or anything else that can be hooked up to decode ACARS.

Please let me know....

4018. Good Used Test Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-19 00:00:00 UTC
From: tomg@fullnet.com
Message-ID: <8v8slq$g3a$1@nnrp1.deja.com>
Source record: 68791

I have a lot of GOOD USED ELECTRONIC TEST EQUIPMENT for sale, at

http://www.fullnet.com/u/tomg/gooteesu.htm

The equipment is all inspected and tested (by an electrical engineer) in detail, and working, before being sold. Cleaning and minor repairs may also be done. ALL EQUIPMENT HAS A MONEY-BACK, RIGHT-OF-RETURN GUARANTEE. Any known defects and anomalies will be noted in each item's description (And we will look hard, for them.).

I have lots of Tektronix oscilloscopes of all types, lots of 7000 and 500 series plug-ins and mainframes, Tek manuals, lots of Hewlett Packard (HP) equipment, General Radio items, and many other manufacturers' equipment.
(I also have a varied selection of new electronic components and used vacuum tubes.)

My aim is to price everything *significantly* lower than any test equipment dealer. You MIGHT find something cheaper on Ebay, but it will probably be "untested, as-is, no return". I don't know about you, but I just can't see paying a few hundred dollars for, say, a high-end Tektronix oscilloscope that MAY or MAY NOT be working, or even repairable! (By the way, I am also in the process of setting up my own calibration and testing equipment. So, I will be able to guarantee my oscilloscopes, and other equipment, as "within manufacturer's specs", "calibrated by me", or "not within specs", etc, as the case may be.

I accept credit card payments, through Paypal, as well as personal checks, company checks, and money orders/cashier's checks.

The page is new, and is still being constructed. So far, it's just a list of the makes and models. I am in the process of adding pictures, descriptions, and prices, and jazzing up the HTML. In the meantime, please email me if you have any questions about specific items (email link is also on site page).

Thanks.

hi mike
welcome to 6 meters
the band is called the magic band cause its very tough to predict when it opens
and to where but normally it opens mid day or early afternoons
the freqs to listen to is 50.125 and 50.110 and also listen below 50.100 for the
CW beacons it will help let you know when the band is open
as for the icom FM board for that 551D you might as well try to find a woman
who doesnt like shoes there out there but real hard to find
see icom made that as an option and back when that radio was made there was very
little activity on FM so not to many people bought them
so if you find one it most likely would be in a radio that the ham wouldnt want
to seperate
besides most of the activity on 6 meters is still on SSB anyways
good luck hope i helped
please email me if you need anyhting else

Mike wrote:

Sure you're doing it right?...my FT-990 says 'Turn the power OFF then press and hold GEN and ENT then turn the POWER ON. This will reset most settings to default.

So I'd say that you need to turn the set off, press 'and hold' STO and 29 and ENT, THEN turn the POWER ON...are you doing this?...(you gotta hold those three buttons in THEN turn the power on)

FS a nice Triton IV Station:
Triton IV Model 540 HF transceiver
TenTec External Digital Readout/Counter Model 244
CW Filter Model 245 installed in Triton
Noise Blanker Model 249 installed in Triton
TenTec 18 amp Power Supply Model 252G
Two optional 10 meter Crystals #s 212 and 213 for coverage of entire 10 meter band installed in Triton
Stand alone TenTec Ammeter Model 207 for use with the 252G PS
DC Circuit Breaker Model 1140
Swan Mic made by Sure similar to Sure 444 wired for the Triton

I have all original manuals and TenTec service documentation.
All equipment is in very nice shape and works perfectly. The Triton PTO is very stable and operates smoothly.
Price is $575 shipped for entire station. I may sell items separately in the future if the complete station does not sell.

The Motorola AC power adapter caused problems in the very early
products. As long as the modem is at least 2 years or newer, the problem
should be gone!

Hello Dick. Standard Amateur Radio was bought out by Yaesu, sometime within the past year. Check around Yaesu's web site for any further info. I also heard some mention that Yaesu had also dropped their interest in Standard stuff, but I can't substantiate that.

My US Robotics CMX makes no noticable noise. My Router/LAN makes some
noise, including a nasty spur on 810, which obliterated KGO. An
MFJ-1026 (modified) took care of that.

4032. Re: Best HF band for emergencies?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-19 04:02:56 UTC
From: Richard Ferguson <raferguson@att.net>
Message-ID: <3A17518C.B81EAC35@att.net>
Source record: 68760

You are about on target as far as 2M, 40M, and 80M being the right bands. Depending on the solar flux, time of day, either 40M or 80M would be OK, I think that most ARES groups use 80M. Do some web searches for ARES groups in your area, listen or check into one or two of their nets.

If you know about NVIS, you are ahead of most people, but most dipoles are good NVIS antennas, even if you don't specifically design them for NVIS use.

I agree that the IC-706 is not ideal for low power consumption, but there are a couple of new radios out there (I think that Yaesu just introduced one) that are multiband QRP (20W or less) type radios that might just be ideal for that use. I love my 706, but figure it is mostly a radio for use in my car with my car's electrical system.

Speaking of Force 12, I just received their catalog today! I was
blown away! Its not a standard item/price book. It is actually
educational!

Anyway, people have been talking about verticles in this thread. I
Highly and inthusiastically suggest you check out Force 12's V-3 or ZR-3!

I have no opinions as I have not operated this antenna. BUT, I'm
impressed with what I've read and the opinion of AA6PW who has run
Force 12 antennas.

They deserve a look!

The battery is behind the faceplate. You can get a replacement at RatShack, but it will not have the solder tabs. I replaced mine 3 times and got tired of digging into the radio, so I soldered two wires and brought them back to the main radio chassis where I put in some mercs and shoved them into a spare place.

Next time it will be easier to replace the batt, just open up the top cover. gettting at the faceplate back is a pain.

cheers

I know a lot of amateur radio operators have access to all kinds of neat stuff that we commercial stations use too... so I thought I'd give it a shot.

Does anyone know where I can get a nonpenetrating satellite dish roof mount? I don't have a huge budget... so that's why I'm looking for a used one. We're moving our station... and I gotta find one for my dish.

Thanks,
Tim

I know of one menu to shift the TX audio from -300Hz to +500Hz:
- select the proper sideband
- hold FAST and press RF-FSP simultaneously
- adjust shift using VFO knob
- hold FAST and press RF-FSP to leave menu
TX audio shift is active only in LSB and USB and while RF-FSP is on.

Willis, why would one need this zener etc?...I had an FT-2400 with a duff backup battery and used it mobile for months with no problem except that it wouldn't hold anything in the memory when the vehicle was parked. Finally got peed off and put a new battery in it.

4055. Help with HTX 245

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-20 00:00:00 UTC
From: Brian Haren <bharen@earthlink.net>
Message-ID: <gKgS5.11893$xd3.898692@newsread1.prod.itd.earthlink.net>
Source record: 68656

All,

I just hooked up my (fairly) new RS HTX 245 (2 meter mobile) to a regulated 23 amp 13.8 v power supply. Prior to this I had been running it in low power using a 6 amp supply. According to the radio owner's manual, with a power supply of 10 amp capacity or more I should be able to switch the radio to high power and transmit at around 45 watts. However, the radio will not transmit at more than 10 watts on either high or low power settings on this 23 amp supply. I tried resetting the radio to factory settings, but the problem persists. Before I pack this thing off to RS for repair (it's still under warranty) I was wondering if anyone out there has experience with this unit and can let me know if there is a configuration or switch setting I might try to get this thing working in high power? Thanks!

Measure the DC power supply voltage WHILE you are transmitting
in the high power setting to make sure it's still about 13 VDC.

If you are using an indoor antenna, RF may be getting back into
the power supply.

I hear ya. Sounds about as much fun to me as root canal. To me it's
nothing but work. I notice they called it sweepstakes. I wonder why no
one wins anything. I might be able to fathom fighting the drudgery if I
knew I might win a new IC-756pro or something like that. Thank god for
WARC bands is all I have to say. And yep, I hang on 160 alot too. Need
more people on that band during non contest times. It's wall to wall
during contests, but turns to a dead zone nearly once they are over. Of
course trying to put up a decent 160 antenna not always easy. Mine
leaves alot to be desired. MK

Get a big deep cycle marine battery. It would run that 706 thru quite a
long crisis. gets low? Just truck it out to the car and recharge a
while. I use anderson power connectors to make this easy. All my rigs
use them, and also my power cords from the cars, batteries. I can jump
start my car without getting out, or recharge a 2nd battery, etc. Works
great with those connectors. There is no male/female. Any one connector
can be plugged into another, and there is no way to reverse polarity.
They can only go one way.

> I would like to know what are the typical day and night distance
> characteristics of 40m?

40 real good in the day for medium regional use. At night, the band
likely will stretch out too long.
>
> Typical day and night distances on 80m?

80 can be good day and night for medium distances. During day, 80 can
easily work out to 200-300 miles usually. At night stretches out, but
still good close in coverage. Depends on the distance needed. If under
200 miles, I'd use 80 m day and night. If over 200 miles, I'd use 40
day, 80 night.
>
> Do the ARES/RACES groups have a preference between these two bands? Do
> they have emergency nets on 40m or 80m?

Dunno, but say for instance MARS. The two main HF frequencies usually used will be appx 40 and 80 m. When 40 gets too long, they go to 80. I run much the same way mobile. I can talk all day to all my regional buddies and buddetts on 40m no problem. When it gets dark, and I hit a gas station, I change to 80m and talk to the same on that band. I can yik yak all day long to the same appx people. MK

The proper procedure can be found at
www.mods.dk

"John Eckart" <JEckart@mail.com> wrote in message
news:AViS5.1103$El3.13488@open-news.pacbell.net...
I have a Yaesu FT-530 (early model) and I modified it to expanded receive
and it has worked great all these years.

My lithium battery recently apparently failed and its memory was messed up
(I've been meaning to change that battery :), so I was forced to reset the
radio by holding MR & VFO while turning on the radio. I wasn't getting
expanded receive anymore so I then held the Up & Down arrows while turning
on the radio to re-enable the mod (I believe that is how it was done) but I
cannot get expanded receive anymore!

Why isn't it working? What am I doing wrong?

It doesn't necessarily need to be a big deep-cycle battery (also called
marine batteries).

Connect the radio to the battery (or batteries), and hook up a small charger
to the batteries. The charger can charge the batteries, but not run the
radio - that's what the batteries are for.

Group, et al.;

I'm selling or swapping out of the 2 meter game.

FOR SALE;

*KENWOOD, TH28A, (small, 2 meter, transceiver), 5 watt.
*KENWOOD, Speaker/Mic. VOX, headset/headphones, etc.
*ASTRON, RS-7A, 13 VDC, 7 Amp., power supplies, 2 ea.
*MIRAGE, Mod. B-23, 30 watt, 2 meter, amplifiers, 2 ea.
*MICRONTA, VHF/UHF power and/or SWR meter, for 2 meters
*All Manuals, Schematics, cables, connectors, diagrams, etc......

All the equipment is in original containers, in good operating
condition and is practically as new.
If you are into Amateur Radio on 2 meters, I have a very good
offer for you. E-mail me if you're interested.

I'd probably swap the entire collection for a high quality
fax machine.........

Have a GREAT THANKSGIVING !!
and Best 73's fm.----

From: kica <kica@prtcnet.org>
Message-ID: <8vakq0$56s$1@nd.eastky.net>
Source record: 68743

Hi, I am very much an amateur and I'm probably out of my league in this group, but I have many questions about how I can improve my AM radio reception. If I'm in the wrong newsgroup would someone kindly direct me to the newgroup I belong in? Anyway here goes.

I live in a small town about 300 miles from Cincinnati, OH. I love listening to 700 WLW (700 AM) in Cincinnati and for some time I have been listening on a portable radio through the static and fade outs. Now however, a local station has been broadcasting nearby (690 AM) and I am experiencing much interference from the local station. Some people have suggested I purchase a "super radio" or a GE SR III (I think) and others say purchasing an amplified? AM "loop" antenna for my digital tune stereo system is my best bet. I have a Terk tower AM/FM antenna on my stereo system that does great for my FM radio but lousy on AM. Some people say that an antenna call "Phantom of the airways" is the best and others suggest I purchase an antenna at Radio Shack, another person told me Terk was the best but I should try an AM only antenna. Other say that an antenna won't help enough that I need to purchase the super radio to tune the station in more precisely. Someone told me if I live more than 125 miles away from the station nothing will work in the daytime. I am at my wit's end and I'm running out of people to ask in this small town. Any help will be greatly appreciated. .

Kica

Message-ID: <8vbkqv$r8$3@mark.ucdavis.edu>
Source record: 68747

Hello there,

Yes, Swan made the Siltronix 1011 tranceiver... I've put a web page up
for the tranceiver on the sonic server Amateur Radio Pages. Check out:

http://sonic.ucdavis.edu

.... on the amateur radio pages you'll find the Siltronix Page link about
half way down. Also feel free to look around the sonic server, lots of
free programs, drivers and ham radio goodies.

The Siltronix Tranceiver was a dual band AM/SSB HF radio which had the
10(Tx & RX) and 11(RX only from the factory) meter bands. You can even
find the owners/service manual there free. What a deal...

When your done, drop me a note or your comments when you get time. I'd
also add anything you have that would be interesting. It's a public
server to place useful things.

cheers

skipp@pilot.ucdavis.edu

My 2 cents on Butternut. Excellent antenna and great service from the manufacturer. Based, on what I read, I won't be buying any Cushcraft products. No support and no parts? Sounds like they did not learn from the Japanese very well.

Regards,

Duffy - WB8NUT

Hi there,

I am looking for old electronic musical instruments and accessories, in any shape, working or not.

Old synths, drum machines, keyboards, effects, MIDI modules, vocoders, sequencers or any old patchable, modular or analog synth.

Moog, ARP, Roland, Korg, Oberheim, Sequential, etc....

Please email me privately with price and condition.
Thanks in advance!

for eg but not only:
Moog Sonic Five V
Bode Frequency shifter
EMS Synthi AKS
Buchla Music Easle
Korg PS-3300, 3200 or 3100
Elka Synthex
etc!

Hi,

My wife was asking me if my radio would cause any interference if we were to get satellite tv instead of the cable. I've been searching the web for a couple of days without any success in finding any sites or discussion group articles. (Dejanews) I operate mainly HF and can, but rarely, use an amplifier.

Anybody have experience with this situation?

Gary N2UM

Hello Gary. I have operated both at two locations, as well as in a motorhome. I have never seen any interaction between the two. Used both RCA and Sony satellite receivers. My current setup has the satellite dish about 30 feet from my tower and pointing almost directly at it. Running up to KW. No problems at all.

4103. Antenna/Duplexer for Broadcast & 2M/440 ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-21 00:00:00 UTC
From: Miles Gillie <mgillie@pobox.com>
Message-ID: <r45l1t8qve8qq7adcpoc7lf6rrhh487pgd@4ax.com>
Source record: 68607

I have a friend who wants only one antenna on a Mustang he is rebuilding, but wants to have AM/FM Broadcast as well as a 2M/440 dual bander operation with it. Is there such an animal or is he dreaming too much on this one? He realizes that the performance will be compromised greatly on each band, but wants to consider it.

Thanks,
Miles

For Sale:

Kenwood TR-751A 2M All Mode. Works Great, about a 8.5 cosmetically. Mic works, but the DTMF and up/dn buttons on the mic do not (bad cable?). $250.00.

Tempo 2020 10-80M HF Rig w/mic ... Cosmetically quite nice... could use some contact cleaner or pot cleaner on some of the controls... but works good. $200.00

Alinco DJ-S11T 340mw 2M HT... nice little radio, fit's in your shirt pocket. I lost the manual (I may still find it) but have the "quick ref" pdf printout (the actual manual was not much bigger). It's about 18mos old... my wife used it mostly just to listen to me when I was mobile and commuting... $90.00

E-mail if interested

Does anybody have any rough estimates on how far you can talk simplex mobile to mobile from one 50 watt 2m rig to another running full power over gently rolling heavily forested hills using 1/4 wave ground plane mag mount band 2.6db gain antennas? Will 10m mobile to mobile each running 25 watts (with appropriately tuned 10m antennas) provide better results since it is more likely to exhibit ground-wave propogation? Or will it be more likely to be absorbed by the thick vegetation due to lower RF energy? I am interested primarily in simplex communications with another amateur (General Class) who has an all-band hf/vhf/uhf mobile rig running 50 watts. I can't afford such a rig and am trying to decide to go either with an HF (I am currently studying for my General Ticket Upgrade) rig or a VHF/UHF dual-bander.

Thanks in advance

```
Turn the radio with the FAST and the LOCK key pressed at the same time.
then press the FAST and the ENT key to access the menu.
then go to menu 9-9 and set it to GEN then press ENT to get out. To get
it back to normal repeat the steps and select 15 instead of GEN.

Turn ON the radio with fast and lock keys depressed
this should enable the further menu items, note it is fast and lock
use fast and enter after this to enable normal menu mode
You should see further menu items 9-1 to 9-9 now

One thing to remember.... The Broadcast radio has 92 Ohm coax, I think...
What year Rustang is it? did they have a "Window antenna" option? Ask the local
Auto window replacement buisnesses. If so, it's pretty cheap to get 'em done.
There are aftermarket ones that could be tried.
Then put a 2m/440 antenna(close to stock looking) in the origional antenna's
mounting point. REPLACE THE COAX, too...

My guess is 10 to 15 miles on 2 M.

My limited experience with 10M mobile for local use indicates that 2M
mobile works better, stronger signals. This seems to be true even when
running more power on 10M. Obviously 10M is more fun when the band is open.

I'd get an older Icom 706 or 706 MK II for around $400 - $600 & try some 6
Meter mobile for 8 - 300 miles depending on the terrain. You would also have 2M
for starting out & for later if you upgrade.
I have a full wave horizontal loop that is also a Surfboard Rack on the
fiberglass cap of my pickup truck for 6 M AM/SSB. I have a Hustler 2m 5/8
antenna that works alright for FM. There are alot of 6 Meter repeaters popping
up lately, too.
THis is also Prime Season for 6 Meter DZ.. Lotsa hits on the spotter nets...

I have Cox cable. Bought the modem/install package at Comp-USA where I phoned Cox and they installed the next morning at 8am! I was very surprised and pleased.

I have the SURFboard by Motorola and no problems yet with RF noise.

BTW if you plan on networking your in house PC's I just bought a pair of Intel "AnyPoint" home networks which use existing single line phone wiring in house for LAN.....works great but had a little trouble installing software.

4121. Re: HV supply from oven parts?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-21 00:00:00 UTC
From: wk@antispamfrc.niwa.cri.nz
Message-ID: <32ce500f.351676385@news.niwa.cri.nz>
Source record: 68625

The 3 microwave oven transformers I have produce 2800 V unloaded.
This collapses to 2400 V loaded at 500 mA. (Magnetic shunts removed)

I found a single transformer to get quite hot at the needed load
current of 500 mA, so I ended up using two. Each transformer is half
wave rectified and supplies half a cycle. The supply is twice as heavy
now, but runs nice and cool. Another drawback is that half wave
rectification makes for noisy cores (particularly after removel of the
shunts, which wedge the coils)

Watch out with full wave rectification....you would have cut the
ground tab on one side of the secondary. This is the side that has a
low breakdown-to-core voltage rating...the core will have to be
isolated and floating.

Using a 24 V transformer as an auto-transformer to reduce primary
voltage is a good one. You could also consider unwinding the
seccondary to reduce voltage...not easy, since the stack is welded.

I don't think microwave oven transformers make great HV power
supplies...even after removal of the shunts they still sag quite badly
under load. Even commercial amps with voltage doublers don't sag as
badly as that.

That leads me to a question: the valves in my amp are rated at 2.5 kV.
The no-load plate voltage soars up to 2.8 kV, but collapses under load
to 2.4 kV when I 'put my foot down'. Being used to semiconductors, I
am a bit uncomfortable with this...is it OK?

Well, I am all set to replace the battery after lasting over 11 years. I did try and see what it would take to get the front cover off the radio and got the plastic cover off but it looks like the battery is buried behind the display. Now the fun begins because it looks as if there are two screws holding the PC board to the frame of the radio and there is a shield covering over one of the screws. I was unable to remove the shield. Do I have to remove the mic jack to remove the shield or is there a good way to remove? I will also have to replace lamps while I am back there as well. I can keep 12 volts on this radio in the future since I use it as a base radio, just shut the power down. I hope the next battery last as long as this one has.

Dennis,

I am finding out that finding a FM board for that radio is like finding the mising link. (g)

I have a Yaesu VX5 that will do 6 meter FM amd will also drive a 6 meter linear I have so I can get by.

Thanks for your info!

Hi and thanks for reading this post

I recently acquired a General Electric 40ch CB radio Model A3-5825B (twin board model) with the view of putting it on 10m.

Has anyone got the schematic diagram for this radio as I don't have one and the rig has been tampered with by someone. Currently the lights come on but there is no-one at home (no RX/TX). It appears that components have been added and subtracted but I don't know what the correct ones should be.

Any help would be appreciated. Scanned schematics are OK but please email me direct and don't forget to remove the SPAMJAM

Thanks in advance

Not only does (may) it create problems with our frequencies, more likely, it will create problems such as "bad picture" with THEIR frequencies and they will soon be out to check as THEIR customers will be the ones with the peeves.

Also, usually they use very well shielded cables for this type of run and you are very lucky if you get a "direct" optical fiber run into your home which would cause no bleed at all.

In my area, we are two blocks from where the optical "downloads" to RF.

Paul

I turned this group back into what it used to be -- at least for me.

Using the message filter function, my reader auto deletes anything with:
FA, F/A or Auction or EBAY in the subject line.

In addition, anything in the subject line that says MACEY.

Like magic! newsgroup becomes what it used to be!

also, to make sure, I nuke anything from RLUCH2098 in the from line.

Try the filters -- it works wonders.

cheers

Yes, it can be a problem.Try to get some higher voltage bulbs
next time and they last better. eg 28v.

Also keep the dimmer on all the time. That drops the voltage.

Cheers

Mark,

I was primarily looking for the local/regional propagation
characteristics of the 40m and 80m bands. Your information was quite
helpful.

Thanks,

TR

Message-ID: <20001122114559.24657.00001014@ng-cd1.news.cs.com>
Source record: 68550

Ok, here is the scoop. I am putting up my first ladder line fed antenna. I am blding a 160 meter dipole and want to feed with ladder line. Items of consideration please:

1) I have 100 ft of ladder line.. Don't need that much. Should I cut to needed length?
2) My shack is covered in sheet iron. I have windows. Is this a problem ? If so, how do i deal with it?
3) I am somewhat of a coward so antenna will be at abt 30 feet since I am a coward and won't climb any higher. Think this is ok?
4) I am using 12 gauge insulated wire because of an abundance of trees. Will run thru a couple of them. Problem with insulation, gauge of wire? Can I load the amp up with this?
Tnx and pls email with thoughts

Bill

4156. The New Yaesu Backpack Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-22 00:00:00 UTC
From: raoul@olympus.net
Message-ID: <raoul-2211000908150001@node.chimacum.wednet.edu>
Source record: 68552

Hi:

Does anyone have any experience with the new Yaesu backpack radio?

It looks like it will fit into a nice 'niche' in the ham market.

First, as a QRP HF rig. I've heard that the specs and performance are not up to a purpose built QRP rig (Elecraft, et. al) but it *also* has a general coverage receiver which would be useful for purposes other than hamming.

Second, as an alternative to carrying an HT as well as an HF rig. I like the idea of slinging a radio over my shoulder and using a real mike and having a real speaker.

Third, an all-mode 2 and 70cm rig. The power isn't high but I bet lots of folks have brick amps already in their radio inventory which would allow the Yaesu to act as a full power mobile rig.

Fourth, as an IF for higher UHF/microwave bands. It's nice and small and low power is needed to drive the transverters.

In conclusion, it looks like a good 'second' rig. A body could use it for every hamming purpose. True, it would do some things better than others but the total selfcontained idea is kind of neat.

What do you all think?

Jeff

Source record: 68555

I plan to upgrade my license soon, and am looking hard at the FT-100. I am
especially interested in the portability and the "do it all" factors, but I
really don't see much of an advantage in the smaller QRP rig. Why lug around
3 or 4 brick amps when the FT-100 has 100 watts built-in? The new radio is
battery-capable, but aftermarket manufacturers make battery packs for the
FT-100, as well. I really don't see the attraction of the lower power rig
for my needs.

Hi Ed,

Sorry to disapoint you but the modification is striktley intended for the
model II 290.
In my case it works just fine for about five or six years already.
Good for the 23 cm band as I use it right now.

Two days ago I ordered 10 pieces of paper money from 10 different countries from a company called Perth Numismatics. Lo and behold they arrived today and they are very nice and colourful. They even have a bill from Antarctica. I didn't even know they existed. These are perfect for stocking stuffers or people who are hard to buy for. The website address is www.perthmoney.com
Good luck and Merry Christmas

MAKE OFFER.
Mosley Classic 36 Tribander for 10/15/20
Costs $710 new.
This one is several years old.
6 elements, 4 on 10, 3 on 15/20, 8.1db avg. forward gain, 20+db F/Back ratio. Full Kw rating, SWR 1:1 50khz around resonant frequency, max <2:1 entire bands. Weight 69 lbs, boom length 24 ft, longest element 29.75 ft, turning radius 19.25 ft, wind surface area 10.7 sq. ft.
Have assembly instructions.
Disassembled and in garage in Shreveport, LA. Prefer pick-up.
I will be in Shreveport only Sun 11/26 at (318) 868-8821.
Otherwise call (512) 794-0531 or best = send email.

Yep. Invest in a service manual so you can see the equipment needed and how the menus work before you go there and render your radio a fine conversation piece.. Just ask the group if you don't think it can happen.

> Tnx and pls email with thoughts

If you have a tuner with a big balun in it in your shack...you can go all the way ladder line, by changing at the built to two pieces of coax, using just the center wires as your carrieers....keep the ladder line on standoffs about 4 inches away from the building, and watch carefully when you first load up on each band, if SWR changes quickly, back off and skip that band, or run only low power....or use the balun thing and avoid all that....There will be 50 other versions of this but this one will work fine if it suits your fancy...73 good luck, Murray K5MDM

>
>Kica
>

I have two suggestions. Since you were able to receive WLW before the local
station came on the air, you should be able to receive it again if you can
null
out the interfering signal. A loop antenna is useful for this because you
can adjust
the loop to minimize the strength of the interfering station. The Kiwa loop
(sold by Grove
and others) is very good at this since the mounting allows you to position
it in both
azimuth and elevation to maximize the desired signal and minimize the
interfering
signal. It is expensive, however.

A second suggestion is to use a radio with narrow filters or either selectable sideband
synchronous detection or SSB (commonly called ECSS when used to listen to AM signals).
Since the interfering station is 10 kHz below the desired station, you can tune to 700 KHz and
listen to the upper sideband. The GE SRIII Super Radio doesn't have either sync detection
or SSB, but I think it does have a narrow filter. I doubt that the GE SRIII is the answer to your
problem, but I could be wrong.

Good luck,

Tim

4186. FS - DRAKE TR-7

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-22 00:27:14 UTC
From: NOSPAM---cslc82@email.mot.com
Message-ID: <3a1b1204.260960200@netnews.worldnet.att.net>
Source record: 68630

Drake TR-7 HF transceiver in very nice shape electrically and cosmetically. With new dark gray case, no scratches. The rig is very clean inside. There's a 1" hairline scratch on the top aluminum trim. The front panel has some very minor scratches which you have to look for in order to see; overall the front panel is very clean. The side trim pieces are intact; one has been glued but looks good. The back panel is very clean...some minor scratches. Overall, the cosmetic condition of this TR-7 is a "9". Includes the 2.3 and .5 khz filters and the cap/resistor mod to provide wideband (10 khz?) audio which sounds great good on AM and non-QRM SSB. Rig has full WARC coverage. Display works fine, and all pilot lights illuminate. Includes original operators manual. More info and pictures available via email. $425 + freight.

I have a B'nut HF6V with 17m / 12m kit added. It's ground mounted by back fence & has been there since 1987 or 88. Works like a champ, running barefoot from the 'burbs it helped me get my 100+ on 80 & 40 for 5BDXCC. Thoroughly recommended.

Source record: 68504

The effiency of the diapole is much greater as a all band antenna eliminating any coax between the tuner and feed point(use open wire line),if you put coax between the tuner and feed point ,the ant will only perform well at its unmatched resonate frequency.A combination of coax and open wire line in this regard is defeating the purpose of the open wire line. You can TUNA fish,but you cant tune a coax! Sure,you can see a good match after you tune out the mismatch with your ant tuner,but its just a number,the antenna will be a slug! Regards and good luck,Mike

With cable, it depends where you are. I was on a visit to London in the UK, and got on line via my bro-in-law's TV. Monday OK, tue ok. In fact ok til Friday. But Sat & Sun, when everybody gets on line, you get ZIP. The spectrum in cable is limited, and WILL get filled up. Use it while you can. I did. Now I'm on Hi speed Sympatico. Not as fast, but no crowding.

Congratulations !!!

It makes me think back to the times I went up the local hill here (180
')
well the only hill for that matter (The Netherlands is really flat :)
with my good old FT 290/790 R combo, and doing real DX on 2 and 70.

Worked quite some squares with them, and got as far as Greece and YU.
Just 2.5 watts and 1 watts.

I recently aquired a FT100 but all the settings are under 10 watts. Just
no need for more, despite all them brick stackers here in Europe.

If the lottery favours me, the 817 is mine as well. Just for the fun of
it

There were 2 modules available for the MX-300S series,
a PROM (programmable Read only Memory),
that was write once with the 1800 series suitcase
programmer. There was also an EEPROM (erasable PROM),
that you could reprogram many times, again needing
the 180x series programmer.
The A and B versions were the PROM, and the
C & D versions were the erasable jobs. Sometimes,
you can tell the difference since the underside of the
memory module was green on the prom, and red on the eprom.

Have been using Butternut vertical for about 12 years. Only run 100 watts out to ground mounted antenna and have worked about 245 DX countries. Love this antenna.

4220. PL tone for ICOM-251A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-23 00:00:00 UTC
From: Jeff Weinberg <jjweinb@earthlink.net>
Message-ID: <RJcT5.24215$n9.1747030@newsread2.prod.itd.earthlink.net>
Source record: 68594

I recently purchased an ICOM-251A at an estate sale. It's a great radio and a classic, but it does not have PL tone capability. I have a tone generation board that I can use, but I don't have a schematic of the radio to figure out where to insert and power the tone. I have contacted ICOM, but as yet haven't had much luck. Can someone help me?

If you have ever added PL tone capabilities to an 251A, I would like to hear from you. If you have suggestions on what to look for, I would also like to hear from you. If you have, or know where, I can get a copy of the technical manual or schematic for the radio, please let me know.

I would appreciate all input. Please e-mail at my regular addresses of: jjweinb@earthlink.net or w0qo@arrl.net.

Thanks and 73's.

As you get lower in freq., generally your
range will get better. 6 meters I use and
works better than 2 for distance simplex.
I think a 706 is a great idea!!

> KF4ZFS

Look hard at the "problems" with the FT100, also. It's band shared power
amp
is prone to trouble (not all folks, but some, and some is significant).
Depends on what you want to do with it... Don't get caught up in "1 rig
does it all", there are always comprimizes in do-all rigs. You can only
listen (without scanning) to 1 band at a time. An HF rig, an all mode
rig(s),
and a true dual bander goes a long way in the shack,
than one micro (mediocre at that)receiver rig.
Just my 2c.
Vic

4234. Antenna Tuners-Theory of Operation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-24 00:00:00 UTC
From: "Thomas P. Conway" <tomk7rel1@home.com>
Message-ID: <WItT5.26510$15.6237660@news1.rdc1.az.home.com>
Source record: 68522

Ready for a possibly dumb question? I am serious though. I want to know if I should consider buying an antenna tuner to use with my multi-band vertical.

From everything I have read about antenna theory and antenna tuners the antenna tuner will only match the impedance from the transmitter's output to the transmission line, reduce SWR, and eliminate harmonics. Certain antennas operate at certain impedances. The antennna tuner merely corrects the "mismatch" between the transmission line and the output of the transmitter, it cannot "adjust" the resonant frequency of the antenna, as far as overall efficiency, raiation pattern, directivity, etc. Is this correct??

The antenna tuner cannot "tune" the antenna to actually be resonant for a given frequency or band. The tuner merely lowers the SWR on the transmisssion line. Is this correct? Antennas operate most efficiently when cut /built for a certain frequency or band of frequencies. The resonant frequency is determined by the physical and/or electrical length of the antenna. This is why the manufacturers of multiband antennas add inductive/capacitive devices such as traps, coils, etc. which will effectively change the electrical length of the antenna and allowing it to operate at "resonance" and maximum efficiency over a certain ham band.

I cannot operate an end-fed wire as efficiently (i.e. with less loss) using an antenna tuner, as I can an antenna designed for that frequency, can I?? A multi-band vertical is built to be or act as "resonant" on each band. Can I still use an antenna tuner with the multi-band antenna to lower SWR still further, or does this defeat the manufacturer's design ?

If an antenna tuner actually "tunes" the antenna to resonant frequency, why spend all the money buying Multi-band antennas with all their traps, coils, capacitors, and inductors. Why not just go out and buy a much cheaper long wire, and tune it with the antenna tuner??

4235. Yaesu FT470 transmit mode to MARINE bands.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-24 00:00:00 UTC
From: Ed Soniat <ed@texas.gtri.gatech.edu>
Message-ID: <ghoem01wlhi.fsf@texas.gtri.gatech.edu>
Source record: 68523

I want to modify my FT470 HT to be a cockpit/backup MARINE HT.
The modes are listed in several pages.
(http://phreak.org/radio/mods/ft470_1.txt)
One indicates that
it will open the 2M side to 174MHz which will cover the Marine bands.

I'm not confident I have identified the jumpers.

The most significant problem is that the jumper R69 is described as
vertical and I don't see a vertical jumper.

What I need are R67 and R69

R69 is described as under the lithium battery in some and near in others.
It is described as vertical at 10:00.

R67 is describer relative to 68 which is relative to R69 so obviously
I need to id R69 first.

I have identified some pads, but I'm not confident that they are the jumpers
or just pads.

If anybody has done this especially if they can send a picture it
would be greatly appreciated.

My 470 is a great HT I don't want to screw it up.

I own a Kam+ and I do NOT recommend it. Very poor implementation of Pactor. GTOR is not a very well designed mode and works poorly. The thing is probably OK if all you want to do is Packet and RTTY. For serious pactor work, forget it. A distinctly second-rate unit. Mine presently languishes somewhere in the bottom of my junk box.

A used PK-232 would be a far better choice. I have used both extensively, and the 232 is significantly better on Pactor.

Hello.

Can anyone in this group answer a couple of quick questions regarding the operation of a Midland 70-1548 VHF Radio?

I'd like to know if there is a way to stop the scanning of channels without switching to the "Monitor" mode. As well, is there a way to NOT have a priority channel selected?

Thank you for any assistance with this.

Bob

You may have to look online then. Try HRO or AES:

http://www.aesham.com/frames.html

http://www.hamradio.com/

There are many different ham radios, it all depends on what you
want to do and your license class.

Maybe you just didn't understand it, Eddy?...
How could you possibly know for sure how his setup will effect ham-radio?...
You can guess by comparing your system to his, but a neighbor ham should be
able to give him a much better idea about what's going to happen...

Depends, generally not needed.

>From everything I have read about antenna theory and antenna tuners the
>antenna tuner will only match the impedance from the transmitter's output to
>the transmission line, reduce SWR, and eliminate harmonics. Certain antennas
>operate at certain impedances. The antennna tuner merely corrects the
>"mismatch" between the transmission line and the output of the transmitter,
>it cannot "adjust" the resonant frequency of the antenna, as far as overall
>efficiency, raiation pattern, directivity, etc. Is this correct??
>

Yes it is correct.

>The antenna tuner cannot "tune" the antenna to actually be resonant for a
>given frequency or band.

Correct again.

>The tuner merely lowers the SWR on the
>transmisssion line. Is this correct?

Lowers the swr 'between' the rig and the transmission line only. Does nothing
for any swr on the feedline caused by the antenna.

> Antennas operate most efficiently when
>cut /built for a certain frequency or band of frequencies. The resonant
>frequency is determined by the physical and/or electrical length of the
>antenna. This is why the manufacturers of multiband antennas add
>inductive/capacitive devices such as traps, coils, etc. which will
>effectively change the electrical length of the antenna and allowing it to
>operate at "resonance" and maximum efficiency over a certain ham band.
>

You got it. That's correct.

>I cannot operate an end-fed wire as efficiently (i.e. with less loss) using
>an antenna tuner, as I can an antenna designed for that frequency, can I??

Right...to a point...in general yes...

>A multi-band vertical is built to be or act as "resonant" on each band. Can
>I still use an antenna tuner with the multi-band antenna to lower SWR still
>further, or does this defeat the manufacturer's design ?
>

Sure you can but it shouldn't be needed...you see, if the antenna 'is' resonant then there'll be no swr to 'reduce farther'. It's use certainly won't hurt the manufacturer's 'design' though.

>If an antenna tuner actually "tunes" the antenna to resonant frequency, why
>spend all the money buying Multi-band antennas with all their traps, coils,
>capacitors, and inductors.

But it doesn't, it merely tunes the rig to the feedline, doesn't have anything to do with the antenna itself. Or the swr on the feedline itself either. The only value of the tuner in this case is to allow the rig to be tuned, in modern rigs the APC (automatic protection circuits) will prevent much power being delivered into a high swr to prevent damage to the final amplifiers.

> Why not just go out and buy a much cheaper long
>wire, and tune it with the antenna tuner??
>
>
Well, lot's of people do just that and they use open wire feeders too. It's silly to use a random length antenna and feed it with coax and a tuner, this will 'work' but the high loss in the feeder (coax) will make it unproductive.

Put up a very high, very long balanced antenna (dipole type - as long and as high as possible) and feed it with open wire, I'd suggest 450 ohm ladder-line. (or maybe 600 ohm feeders) Then use a good tuner...HooWee!!...you'll rock!...

Paul,
My wife took a trip with her girlfriends to the Caribbean. At that time, I bought the 259B, and she was delighted- no guilt about her trip :-)
BTW, my friends and I call the 259B the "sliced bread machine", it is very handy. I suggest that you also get the leather case accessory.
All functions can be accessed with the case in place.
NiCads are not necessary, because alkalines last a long time with normal use.
And the unit does come with an ac adapter.
Good luck finding one,
Al

The man I bought this from said it didn't work,only thing I found wrong was a bad
100 ohm resistor and a bad oa2 tube(voltage regulator).I replaced the resistor but still needs the tube,so this is sold as is.No powersupply available.If interested contact
richard ... rdalton1@swbell.net. Don't know the value so make offer!

>
> --

An antenna tuner *does not* actually tune the antenna to resonant frequency (unless you hook an antenna directly to the tuner as in an end feed wire). The antenna tuner is more properly called a "match box" and all it does is convert the impedance of the antenna system (antenna and feed line) to a proper load for your transmitter. It does not improve the efficiency of the antenna or the feed line. If you have a high SWR on a coax feed line, you can use a tuner at the transmitter to convert that to a proper load for the transmitter but you still have the same high SWR on the coax feed line and you still have the same losses in the feed line and antenna. A match box is often used with a flat top wire antenna and open wire feeders to form a multi band antenna system. The open wire feeders are used because they have low loss and function efficiently under the conditions of high SWR. Once again, the match box is not tuning anything - it's only matching the antenna system to the transmitter. The antenna and the feed line functions exactly the same whether you use a match box or not.

Would like to trade the above item. Kenwood 940SAT is a 6 mil. number and is in excellent condition. Not 2 hours on it from complete alignment at Kenwood West. Comes with a manual and MC-60A desk mic.

I just happened to own 2 of them. Thought I would try the Kenwood TL-922A amp.

Kenwood TL-922A should be in excellent condition and have full output power.

Will email pictures upon request and would like pic. of your amp.

If interested, email with details.

Thanks 73's Owen KB5XE

Source record: 68474

All,

I need to rebuild a standard Radio Shack Ni-Cad battery pack for an HTX 202 - the original ni-cad cells are shot. I'm trying to track down a replacement ni-cad battery set, or their equivalent. The original battery set is a Saft SKC 6VRE (600 m ah, 7.2 v). Radio Shack does not sell an equivalent, and I can't find anyplace on the Web that carries it either. Can anyone help? Thanks!

(PS - I know RS will happily sell me a complete relacement, and I've already bought one. Now I want to rebuild the original one so I have two!)

Thanks and 73!

Brian

Hello all, I have for sale a fine set of Yaesu portable / mobile 2 and 6 meter multimode rigs. Here are the details:

The FT-690 R II is a 10w (2.5w on battery pack) mobile / portable rig that covers the entire 6 meter band in FM, CW and SSB modes. It weighs 1.2 kg less the battery pack. A included linear amplifier (Yaesu 6020) clips to the back of the basic unit to provide SO-239 antenna jack and external power cable. An optional (see below) battery pack will clip in place of the linear to provide true portable capability. When the battery pack is in place, a front panel BNC connector may be used with the appropriate antenna for the mode. The original telescopic whip with base spring / coil is included. I have used this rig as a mountaintop portable with excellent results, using a small, simple 6m dipole. During field day last year, I made several DX FM contacts with it as well, using a 6m J-pole (made with "window" line) suspended in a tree. To say that the receiver section in this unit is "HOT" would be an understatement!!

The FT-690 R II is in STONE MINT condition. It includes the box / all papers / all accessories (Power cord, linear amp, mobile bracket, original up-down DTMF mike, portable whip antenna.) It ALSO includes the optional FTS-7A CTCSS tone squelch board, which really rounds out the package (PL on TX or RX & TX.....you select!!) I'll sell it alone for $325, or at $375 with soft case and battery pack. The unit (less case, battery pack and tone board,) sells new for over $650, so I am offering quite the deal here!

Now for 2 meters, I have the "twin" to the 690, a FT-290 R II. Identical to the rig above, except is multimode two meters. The clip-on linear gives you 25 watts FM / CW / SSB, and again, 2.5w with the battery pack (9 "c" cells,) Same as the 690, it features two VFOs, selectable mode-dependent channel steps, 10 memories for frequency, mode, repeater shift and tone status. Split frequency semi-duplex operation between the two VFOs is provided, as well as one touch reverse for split memories and standard repeater splits. Scanning features include manual and automatic up-down band, memory and selective memory scanning from the tuning knob or supplied mike, plus priority channel monitoring of ANY memory while operating or EITHER VFO, and programmable memory scanning between memories 1 and 2. An ALL MODE noise blanker and clarifier control are included, and semi break-in QSK is provided for CW. These rigs are feature-packed!

The FT-290 RII is in very good shape, with a couple of minor paint scratches on the bottom of the case being the only marks on it. The front panel is near mint. There is no box or power cord with this one, but all papers (manual, schematics, tone board guide) and ALL original accessories are there; up-down DTMF mike, portable rubber antenna, linear amp and mobile

bracket. There is a SECOND FTS-7A tone board installed in this rig, so PL capability is here as well!! I'll let this one go at $325 alone, or $375 with the battery pack and soft case. Again, sells for over $650 WITHOUT all of the options.

I'll make quite the deal if you want both rigs. I have only ONE soft case and ONE battery pack, and ONE power cord so BOTH rigs, one case and one battery pack I'll let go for $650!! Otherwise, the battery pack, soft case and power cord will go to the first come. I'll ship individual rigs for $10 anywhere in the Continental U.S., and split actual shipping with the lucky buyer of both rigs. Please let me know if you have any questions, and thanks for reading!

4292. Packet/computer question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-25 00:00:00 UTC
From: Dan Yemiola <Dyemiola@LexComInc.Net>
Message-ID: <3A20638B.4B1A70F9@LexComInc.Net>
Source record: 68484

I am thinking of building a packet/RTTY station with the
computer/modem/transmitter one unit all in one case.

I have a 75 Pentium chip mother board, 5.25 floppy, 50x CD ROM, 200w PS
already in hand (junk parts but still working). I also have a Drake
TR-22C sitting around somewhere.
I am thinking of putting all of this in a case as a packet station.
Possibly mounting the TR22C in the computer case also maybe some sort of
HF RCVR with baudot/ RTTY/ PSK capability too.

I realize the TR-22C is very low power at 1w for this application, maybe
I could find another 2m or 2m/440 rig for the XCVR in this lash-up. The
important thing is proper size, i.e. the ability to be able to mount the
XCVR in the computer's case. I would like to put it in a floppy bay on
the front of the computer, so I could also use the unit for voice
operations too.

Any way, what I am looking for is comments, pointers or specific
equipment recommendations, from anyone who has done anything similar.
Specifically:
XCVR specs, (brand names and model #)
Operating system (straight DOS, Win 3.1, or WIN XX)
Application software
RFI susceptibilities between the various components and how to
reduce or eliminate them.
How to bring RF into and out of the case.

Comments welcome @

4306. Re: Antenna Tuners-Theory of Operation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-25 05:42:34 UTC
From: "George, W5YR" <w5yr@att.net>
Message-ID: <3A1F5141.DB7A72C@att.net>
Source record: 68449

Why not indeed.

A point of major importance is that an antenna tuner adjusts the entire *antenna system* - radiating element(s) plus feedline, etc. - to resonance, not just the radiating elements alone. Resonance here means that the antenna *system* then presents a resistive, non-reactive load to the transmitter, preferably at its desired load resistance, usually 50 ohms.

Anything that permits the transmitter to see its desired load will permit the transmitter to deliver its ooutput power to the antenna system. Whether that system comprises a transmission line to radiating elements that contain additional circuitry to permit operation over different bands, etc. or whether additional frequency capability is obtained by means of an "antenna tuner" in the shack is irrelevant to the transmitter - it does not know or care about the difference. To it, 50 ohms is 50 ohms.

You have a basic engineering choice to make: you can accomplish the resonating of antenna *systems* either outside at the antenna or inside in the shack. Many of us opt for the convenience, lowered cost and enhanced effficiency of the inside mode.

An antenna tuner will possibly permit you to operate "off resonance" with your vertical in those frequency ranges where the SWR in the feedline rises higher than you or the transmitter would like. But, some of the multi-band matching networks can be over-stressed when operation outside their preferred range is attempted.

Probably the most bang for the buck in HF antennas is a 135 ft flat-top or inverted-V fed with ladderline and an antenna tuner. It will operate efficiently on all bands from 80 through 10. So-called multi-band antennas owe their existence to the doubtful merit of permitting you to operate over various bands without having to make tuning adjustments. This luxury can cost modey and efficiency.

4313. Notebook PC - $230.00

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-26 00:00:00 UTC
From: brumey <brumey@subdimension.com>
Message-ID: <3a21a5f2$1_3@corp.newsfeeds.com>
Source record: 68348

Greetings:
I have a Toshiba 720CDT notebook for sale. This unit is in excellent condition. It's only been used in a home environment and as a secondary computer for leaning and testing. For detailed specification, go to http://cdgenp01.csd.toshiba.com/content/product/pdf_files/detailed_specs/tecra_720cdt.pdf

In summary, the machine is

133Mhz Pentium MMX processor

2GB Hard disk

48MB RAM

12.1 inch Active Matrix screen

Built-in CD, Sound system, Modem and 2 PCMCIA slots

Software includes Windows 98 (pre installed). All other software has been removed to comply with copyright laws.

Has battery although I have never used on battery power and cannot confirm the battery condition.

I am asking for $230.00 or better offers. Please reply in email with your location, phone number and offer (above $230 please). I would prefer to sell the unit locally (Sacramento, CA) but will ship if I cannot get any interest locally.

Please email me at brumey@subdimension.com

Thanks,

This makes me curious. In the US, is it legal to operate a CB that has been converted to 10 meter Ham operation, assuming of course you are a legally licensed ham with privileges on 10m? I'm not sure how this would be different from building your own radio from scratch, which is legal.

If it is illegal, I'm wondering how other countries view this kind of thing.

Just curious,

Robert / KG4FGN

The squeal sounds like a bad microphone ground. Check the mic plug.

Does the noise increase as you accelerate the engine? If not your problem might be the fuel pump. Are you driving a Ford? Fords are notorious for this problem.

Source record: 68418

Well I had time on my hands so I went at it any way.
One of the set of instructions said that the verticle pads were under
the battery. So I removed the battery and in doing so broke the goop
that was stabalizing it and that goop was covering the verticle pad.

There were still more pads than described but working from thes instructions
I added the two jumpers and it works. At least I thing it works. I
haven't actually talked to a boat yet but I did talk to my mobil
rig. I by all my stuff used and somebody must have been in it and opened
it up bacause it can broadcast on just about any frequency the display
will show. (Well it will attempt to broadcast)

Julian,
Think about what you have just posted.
I am a Navy Mars Op. and have NEVER worked traffic below 10 meter
band. I could see 4.040 or 7.380 the 2510 will not go there,
What gives?

Is anyone familiar with the preamp circuit in Mirage amplifiers? I have
a model B3016 (2M, 30 in, 160 out), and I blew the preamp last night. I
assembled a new station, putting my amps on the tower. I tested both amps &
preamps, all was working fine (great gain on those preamps too!). I went to
test the circular polarization switch to my KLM 2meter antenna, and the
relay didn't fire. I didn't think the relay coil shared a ground with the
coax ground but apparently it does. I hooked up the 12v backwards to the
antenna relay, which I guess sent the 12v through coax ground to the preamp.
After doing that, the preamp no longer works. Signal feed-through seems
fine with the preamp off, but when I turn it on the signal is weakened
(attenuated) a lot. I changed the FET in the preamp circuit, but that
didn't do it. The power amp circuitry seems ok too.
It seems as though there are less than 10 components in this preamp
circuit; does anyone have an idea of what the most likely damaged component
would be? Or a suggestion for troubleshooting with basic equipment?
Thanks! -Gerry KA1STZ

4330. Re: Cable modems

OK, try to read what he has first posted.
Ok, read it again.

Now read what you wrote.
Read it again.

How do you know he hasn't done this already?
He already knows that some modems cause problems. Which tells me that
he is starting to do his homework
When it comes to cable modems, they don't behave differently in
different parts of the country, hardware is hardware.
But different modems do behave differently, and that is what he is
asking.
Now I know that some cable companies are different from others, but
with the right coax, connectors and grounding they all pretty much
are the same unless they have amp or trunking problems(which would
only affect his immediate area).

You see, I have contracted out to cable companies for many years and
know how the system works.
The question this person is asking is the best possible question,
NOT.. maybe you should go down to your local ham club to find maybe
one or two people who have cable. I know I wouldn't want to base my
decision on that kind of data.

Start with the modem, that's where the problem is, other then proper
grounding.

So you see, Your little "dontcha think" answer was just an "I don't
have any idea what I am talking about, but I just have to type
something" kind of an answer.

I would suggest that you leave your simplistic little answers to
yourself unless you have some valuable data to back it up with.

I probably wouldn't have responded to you, but you just had to throw
in that "doncha think"!! Does this make you smarter? You make it
sound as though he was too stupid to think of that himself! DONCHA
THINK?

Hi;
I have a Icom IC-T81A and I am trying to put a Sub audible tone in a simplex frequency and for some reason I can not get it to work,I can not even put a duplex + or - in a simplex frequency,I turned off the Auto repeater function and that still did not help????for some reason I can not put a tone in a simplex on any of the bands.Can anybody help me on this???The reason I want to put in a squelch tone in the simplex channel is to cross band and not have it open until it hears the tone.

John KB9QNG

Please do not post E-Mail me if you can help.

Source record: 68435

Greetings:
I have a Toshiba 520CDT notebook for sale. This unit is in excellent condition. It's only been used in a home environment and as a secondary computer (for learning). For detailed specification, go to http://cdgenp01.csd.toshiba.com/content/product/pdf_files/detailed_specs/tecra_720cdt.pdf

In summary, the machine is

166Mhz Pentium MMX processor

2GB Hard disk

64MB RAM

12.1 inch Active Matrix screen

Built-in CD, Sound system, USB port, Modem and 2 PCMCIA ports

Software includes Windows 98 (pre installed). All other software has been removed to comply with copyright laws.

Has battery although I have never used on battery power and cannot confirm the battery condition.

I am asking for $290.00 or better offers. Please reply in email with your location, phone number and offer (above $290 please). I would prefer to sell the unit locally (Sacramento, CA) but will ship if I cannot get any interest locally. No Swaps this time, I am raising cash for xmas :)

Please email me at brumey@subdimension.com

Thanks,

Kevin.

There are a pair of MPS-2222 transistors used in the preamp stage. When mine blew, I wasn't sure which one, or if both, went bad, so I replaced them both. This fixed the problem in my case. You might want to check the relay and the two diodes protecting it while your in there, you could have blown these also (however, if you power up the amp and can hear the relay kick in and out when you work the preamp switch, then you're probably OK here).

Another thing to check is the contacts on the relays, when they get dirty, the preamp becomes intermittent, sometimes it amplifies, and sometimes it appears to attenuate.

A word of warning, be very observant when making the replacements, the holes in the pcb are not aligned the same as the leads on the transistors, so you need to bend the leads around a bit to get them in the right holes...

73 and good luck,

Dan - W6DKN

Uhhh, kind sir, would you care to get that in writing from Icom?

You're trying to sell a rig with a bad antenna tuner. You should
discount the repair price on that from whatever your asking price is
for the rig.

You say you can't wait the ten days it would take for Icom to repair
the rig, but since you already have another rig, and you're simply
trying to unload this one, what's the hurry?

Buyer beware...

Dan, thanks for your input. I believe the MPS-2222s are fine; the relays operate normally. I think the contacts are clean also, as I played with the preamp (switching it on/off) for about 30 minutes before I blew it. It seemed very consistant when switched on. You do have me wondering on the FET leads though, I think they were aligned with the holes on this one (I hope!) I'm still looking! -Gerry KA1STZ

Source record: 68441

Looking for a case for a Thunderbolt. Also wonder if any one has any comments on this amp. Just about to buy one but it needs a case. Thanks........Bill

4347. maycom mh 466 - manual wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-26 00:00:00 UTC
From: David McCullough <dfmccullough@bigfoot.com>
Message-ID: <5xgU5.14059$ea7.290005@news2-win.server.ntlworld.com>
Source record: 68442

Would any kind soul out there be able to provide me with a manual or copy of a manual for a Maycom mh-466 PMR handheld?

Any help or pointers where I might find one much appreciated

Dave

4348. IC-2710 - Location of VHF Preamp Transistor

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-26 00:00:00 UTC
From: Someone <w1ut@together.net>
Message-ID: <9LgU5.10459$Oc5.465868@nntp2.onemain.com>
Source record: 68443

Hi -

Does anyone know (since I don't have the service manual) where the VHF preamp transistor is located in the IC-2710? Mine is blown (at least these are the symptoms) and I'd like to replace it myself. If you have the service manual, maybe you could look this part up and let me know where it is located. Wonder if its one of the surface mount parts also.

Tnx,
Les

Brian,
You might want to try Mr. Nicad at 800-308-4805. He may sell the
cell-packs that you could insert into your case. I did a similar
thing with a Yaesu pack with cells bought at a swapmeet.

Your 'cell-pack' likely consists of 6 @ 1.2 volt nicad batteries
hooked in series, so you may wish to try some of your local
electronics stores also. Check what is available for cordless phone
replacements, you may have to hook up two 3.6 volt 'packs' together to
get what you need.

Good luck & 73,
Howard KE6MAK

Brian,
Howard's idea is the cheapest, I bought two 3.6 volt, 600 mah cordless phone battery packs at Wal-Mart (on closeout, no less, $3.00 ea!) and used a little hot-melt glue to fasten them together. They fir in the case just like factory. But you might consider getting a NiMH battery insert, same voltage but 1600 mah, almost THREE times the capacity. Several battery sellers offer them, I do business with Primecell.

http://www.primecell.com/index.htm

They also sell a complete 8.4 volt, 1600 mah battery pack, I really like the one I got.

Was this quote written about you?...
"You can take them out of the slums, but you can't take the slums out of them..."
You'll find a fight in anything, so I have to wonder... Everything I said after the reply to him has simply been "let's see how riled up we can't get him" replies to YOU and your dumb-donkey attitude...
Get it? I simply suggested that HE might get a better answer from people in his own neighborhood... Which would obviously be the guys in his ham club.. If he had already done that, he could have simply said so or ignored what I said.. IT WAS JUST A SUGGESTION...
Now, go back to your whining about not getting enough assistance or whatever...

You just can't stand being hit where it hurts, huh?
(Now, THAT's profound sh*t, huh?)
I've noticed that most contesters seem to get very upset when you compare 'em to the vacationer who's travelling for no reason other than the 'trophy' he gets by sticking another state on the map he's got on the back of his motorhome or whatever.. They can always give you a few textbook answers about the sites they've been to after the fact, but that's about it....
So "What's the point" if not just 'trophies' to brag about, huh?...
And, no, I really don't expect any more of an answer from you than what's quoted below...
You're just a typical contester, "as I said before..." hehe..

Amateurs have a very privileged status in the U.S. Every other service may
only operate type accepted equipment. We can operate any piece of junk that
we can buy, build, modify or cobble together, as long as it meets the
technical standards of the service. As technically skilled operators, we
are expected to understand that our equipment does meet those standards.

The only limitation applies to external power amplifiers below 144, and
specifically between 24 and 35MHz, where there are some restrictions on
what we can build/cobble together.

OK! I got this stupid touch lamp that just cycles up and down as I transmit... I have no other RFI problems, in fact I keep a TV running right over the operators station (sound off of course since that's the only way I can tolerate TV) and I see no sign of local RFI. I am told that it's the nature of those stupid lamps. They have a capacitive pickup that trips upon touch and it seems to also respond to rf at any frequency, at any power other than QRP and in any mode....

Has anyone been successful at "fixing" one of these lamps?

Mint condition, Original owner, Original boxes, documentation, cables, hand mic, etc. Kenwood TS 440s w/ AT, 25 Amp metered Power Supply, D104 mic. $625. VERY well taken care of. Never used mobile, non-smoker. This is a great deal for someone-you can't get into the hobby any cheaper. This was my first radio and as such I have "babied" it. I would like to see this go to a good home. Yes, the out of band mod is in place. It will transmit and receive everywhere! Here are some links to some pix I have taken-the lighting is not great, please excuse that, it's the best I can do with the camera I have: http://home.earthlink.net/~danhayman/Radio1.jpg , http://home.earthlink.net/~danhayman/micPS.jpg , http://home.earthlink.net/~danhayman/Top1.jpg.

You know, Jim, I have never seen a "used" 259 or the "B" model, either. Most folks that have them find that they are indespensible tools, and if they are like me, wonder how we got along without them in the "old" days! LOL! I remember peaking the plate and dipping the grid and using a florescent light bulb. Actually, I own two--the original 259 and a recently purchased 259B. The original one stays in the car and I use it to tune my screwdriver. I switch it in with an old 12V changeover relay, tune the antenna, and switch back to the rig. Accurate as the blazes! Keeps me from putting an annoying signal on the air and also protects my finals.

For me, I'd never sell either one of my 259s, and they will be replaced when no longer repairable. I think lots of folks think like I do about this one--if you find a "used" 259B, you're lucky! LOL

I'm looking to use radio equipment for a specific application.
Motorsports to be exact.

I want something that I can put in a car with me and hook up a
microphone in my helmet to speak to crew or other teammates cars. I'll
also need earbuds to be able to hear everything. The range needs to be
about 2.5 miles at a minimum.

What sort of equipment do I need to do this? How much money?

How does licensing work?

Thanks for your help in advance

4405. ADSM-1D versus ADMS-1E software features (upgrade)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-27 00:00:00 UTC
From: Chris Cavigioli <chris-c@ibm.net>
Message-ID: <3A234A49.A3E6A00@ibm.net>
Source record: 68322

Hi,
this is probably a common question, but I do enjoy the programmability of the Yaesu FT-50RD via the ADMS software, but I find the user interface fairly clumsy, not compatible with MS Excel, and other such wishlist items. Furthermore, RT-Systems seem to be extremely unresponsive to tech support questions as well as wishlist requests. I noticed this 2 years ago when I first purchased my device, then again a few weeks ago when I discovered that ADMS is now at revision "E" and I asked some simple questions about "What's new?" and "Can I get an upgrade?" (still no response to date).

Do any of you know what the difference between ADMS-1D and ADMS-1E is? Are upgrades possible?

Has anyone figured out how to program a Yaesu FT-50RD from a Palm Pilot III ??

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
newsgroups is so that folks who aren't interested in, say, homebrewing,
don't have to wade through messages about homebrewing on the way to read
about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio
was renamed to during the first major reorganization. Any amateur radio-
related message that's not more appropriate in one of the other groups
belongs here, from contesting to DX to ragchewing on VHF to information on
becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to

(surprise!) digital amateur radio. This doesn't have to be the common
two-meter AX.25 variety of packet radio, either; some of the most
knowledgeable folks in radio digital communications can be found here, and
anything in the general area is welcome. The name was changed to emphasize
this, and to encourage discussion not only of other text-based digital

modes, such as AMTOR, RTTY, and Clover, but things like digital voice and
video as well. The former group, rec.radio.amateur.packet, was removed on
September 21st, 1993. It is obsolete, and you should use .digital.misc

instead (or the appropriate new mailing list, mentioned below). The group
has .misc as part of the name to allow further specialization if the users
wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became
evident shortly after the original group was formed: Hams don't just swap ham
radio gear, and other folks besides hams swap ham equipment. If you have radio
equipment, or test gear, or computer stuff that hams would be interested in,
here's the place. Equipment wanted postings belong here too. Discussions about
the equipment generally don't; if you wish to discuss a particular posting
with the buyer, email is a much better way to do it, and the other

groups,
especially .equipment and .homebrew, are the place for public
discussions.
There is now a regular posting with information on how to go about
buying and
selling items in rec.radio.swap; please refer to it before you post
there.
To answer a frequently asked question: No, there is no mailing list
that
goes along with this group. If you can't read Usenet news directly,
you're
out of luck.

The group rec.radio.amateur.policy was created as a place for all the
discussions that seem to drag on interminably about the many rules,
regulations, legalities, and policies that surround amateur radio,
both
existing and proposed. Recent changes to the Amateur Radio Rules (FCC
Part
97) have finally laid to rest the Great Usenet Pizza Autopatch Debate
- it's
now legal to order a pizza on the autopatch, if you're not in the
pizza
business - as well as complaints about now-preempted local scanner
laws
hostile to amateurs, but plenty of discussion about what a bunch of
rotten
no-goodniks the local frequency coordinating body is, as well as the
neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the
Citizens'
Band radio service. Such discussions have been very inflammatory in
rec.ham-radio in the past; please do not cross-post to both
rec.radio.cb and
rec.radio.amateur.* unless the topic is genuinely of interest to both
hams
and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place
where
informational messages from across rec.radio.* may be found,
regardless of
where else they're posted. As of this writing, information posted to
the
group includes Cary Oler's daily solar progagation bulletins, ARRL
bulletins, the Frequently Asked Questions files for the various
groups, and
radio modification instructions. This group is moderated, so you
cannot post
to it directly; if you try, even if your message is crossposted to one

of
the other groups, your message will be mailed to the moderator, who is

currently David Dodell, WB7TPY. The email address for submissions to
the
group is rec.radio.info-moderator@primenet.com. Inquires and other
adminis-
trivia should be directed to rec.radio.info-request@primenet.com. For
more
information about rec.radio.info, consult the introduction and posting

guidelines that are regularly posted to that newsgroup.

==========
The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment,
.homebrew,
and .space are for more specialized areas of ham radio: discussions
about
antennas, the older tube based amateur, military, and commercial gear,

commercially-made equipment, homebrewing, and amateur radio space
operations.
The .equipment group is not the place for buying or selling equipment;
that's
what rec.radio.swap is for. Similarly, the .space group is
specifically
about amateur radio in space, such as the OSCAR program and SAREX, the
Shuttle
Amateur Radio EXperiment; other groups cover other aspects of
satellites and
space. Homebrewing isn't about making your own alcoholic beverages at
home
(that's rec.crafts.brewing), but rather construction of radio and
electronic
equipment by the amateur experimenter. The .dx group is devoted to
long
distance amateur communications. Each of these subgroups has its own
charter and FAQ; please refer to the archives to find these documents.

==========

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups
are
available by Internet electronic mail in digest format; send a mail
message
containing "help" on a line by itself to listserv@ucsd.edu for
instructions
on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by
using a
gateway at the University of Texas at Austin. To post a message this

way,
change the name of the group you wish to post to by replacing all of
the '.'s
with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and
send to
that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example).
You may
crosspost by including multiple addresses as Cc: entries (but see
below). This
gateway's continued availability is at the pleasure of the admins at
UT-Austin, and is subject to going away at any time - and especially
if
forgeries and other net.abuses become a problem. You have been warned.

<SNIP>

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is
genuine
interest in both groups in the topic being discussed, and when you do,
please
include a header line of the form "Followup-To: group.name" in your
article's
headers (before the first blank line). This will cause followups to
your
article to go to the group listed in the Followup-To: line. If you
wish
to have replies to go to you by email, rather than be posted, use the
word
"poster" instead of the name of a group. Such a line appears in the
headers
of this article.

One of the few examples of productive cross-posting is with the
rec.radio.info
newsgroup. To provide a filtered presentation of information articles,
while
still maintaining visibility in their home newsgroups, the moderator
strongly
encourages cross-posting. All information articles should be submitted
to the
rec.radio.info moderator so that he may simultaneously cross-post your

information to the appropriate newsgroups. Most newsreaders will only
present
the article once, and network bandwidth is conserved since only one
article is
propagated. If you make regular informational postings, and have made
arrangements with the moderator to post directly to the group, please
cross-post as appropriate.

I have a working Hickock Navy Multimeter/VOM for auction at eBay. Starts at $80. Here's the info.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=509132128

This is an old Navy multimeter manufactured by the Hickock Electrical Instrument Company. I have tested it with a 6VDC battery and it measured it correctly. It is missing the cover that would go over the front of it. The red label on the top reads as follows:

AN/USM 116
MULTIMETER
SUPPLY: 105 to 125V 1 [unknown symbol] 50 TO 400 [cycles symbol] SERIAL B17
CONSISTS OF ACCESSORIES AND THE FOLLOWING
1 MULTIMETER ME-180/USM-116
NAVY DEPARTMENT
BUREAU OF SHIPS
CONTRACTOR & MANUFACTURER
KICKOCK ELECTRICAL INSTRUMENT CO
CLEVELAND OHIO
CONTRACT NO bsr-87359

Function dial settings:
Off, -DC, +DC, AC, MILS, OHMS.

Range dial settings:
1 X 1, 3 X 10, 10 X 100, 30 X 1K, 100 X 10K, 300 X 100K, 1000 X 1M (dc only).

Meter scales:
0 - 1 (black), 0 - 3 (black), 0 - infinity ohms (blue), 0 - 10.0 VAC (red), 0 - 3 VAC (red), 0 - 1 VAC (red).

Probes:
OHMS-MILS (red), COM. (black), D.C. (black), A.C. (black). The A.C. probe has a strange "Test Prod" at the end (see picture).

4416. Wanted: pages from Knight T-60 assy manual

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-27 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <m0vU5.10$mz3.36@dfw-service2.ext.raytheon.com>
Source record: 68386
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I'm in need of some pages from the Knight T-60 assembly manual.
I need pages 18 through 23. Photocopies would be fine. I got
a copy of the manual from someone on line, but it's incomplete.
The BAMA does not have the pages I'm looking for (they have the
operating information, but not the assembly information).

73,
Dean, K5DH

You are using that frequency to specify scanning limits, right, and your 1L
is lower than your 1U?

I have for auction a nice Yaesu FT-401B HF All-Mode 560Watt
Transceiver. This rig was made around the same time as the popular
FT-101 series radios. It has a built in 120 VAC Power Supply. I will
include the original manual and schematics.

It covers 80, 40, 20, 15 & 10 Meters. Modes: USB, LSB, CW & AM.
Power is 560 watts PEP & 430 watts CW. It's loaded with a bunch of
other features!

The current price is nice & there is ~NO RESERVE~
The auction will end 6:31 PM Pacific Time today Nov. 27, 2000!

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=502284390

Thank You & 73,

Mike KQ6MU

No, repeat NO radio is mint that is one year old. Besides, its MARS converted and that un mints it. Well, for $20 more you can get a brand new one with the full year warranty so its academic anyway.

>> Thanks! -Gerry KA1STZ
>
>There are a pair of MPS-2222 transistors used in the preamp stage.

Nope -- the 2 MPS-2222 (or MPS-A13 on the schematic) are general
purpose xistors, and are used in the B3016 to drive the 'change-over'
relay and to drive the 'switch in the preamp' relay.

The preamp is a J309 -- and just a handfull of components (as the
original poster noted.)

I have the B3016. I was somewhat unhappy with the preamp's
performance. I scraped off all the preamp's components and
installed a Hamtronics LNY-146 on some short stand-offs over
the same piece of real estate where the original amp was.

http://www.hamtronics.com/hamtronics.html

For $29 you get 0.6 dB nf and 18 dB gain.

Hello. I have a Kenwood TS-130S for sale. This unit covers 10-80 meters. It has SSB and CW modes,speech processor, VOX, digital display, analog signal meter and many other features. It runs on 12 volts. Rig is in good operating condition, and is in decent physical condition. It has some scratches on the case and around the front trim from it's previous mobile use. Has some wear around the power switch. I have had it serviced racently at Ham Cental here in NY. I have a short power cord and a copy of the manual that I received with it. It does not have a mic included with it, it was used on another rig. I am only asking $ 300.00 for it and I will ship within the lower 48. Please reply by E-mail if interested. Thanks in advance!

Riled up?? LOL
I'm just having some fun, but it sounds as though you need to put
your cane down and ease back in your rocker!

Dumb donkey?? hehe never heard that one before!

All I am saying, is that he asked a simple question and your first
reply points a finger as if he is not smart enough to ask around. It
is quite obvious that he has done some homework DONCHA THINK? Your
suggestion was fine, but it was the last comment that suggests you
being superior and him being inferior.

You have this tendency of trying to make people look stupid... it's
just YOUR insecurities.
Read some of your previous posts!

Tell me, I your life do you always get into arguments? You seem to
get into a lot of them in this and other newsgroups, which would tell
me that you are very insecure and that...a) you are very
argumentative life and go on without listening to what others are
telling you. or b) you get pushed around and this is just a form of
relief.

Please read some of your past posts as if you didn't write them...
One little word sometimes says a lot!

4441. Garmin / Kenwood data APRS cables?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-27 07:01:33 UTC
From: tjp <tjp@pobox.invalid>
Message-ID: <l8142tc2gt9jpoh7v20b6mi112hia8s1ji@4ax.com>
Source record: 68375

Hello, could someone please point me in the easiest direction as to where/how I can purchase/construct a cable to connect my Garmin GPS III+ to my Kenwood TH-D7a and another one to connect the GPS to my Kenwood TM-D700A?

Please and thank you.

Just to prove a point to my other post...

Re: That HAM Movie, "Frequency"
YOUR QUOTE
"Duh... You really didn't see anything 'glaringly wrong' about it?
.;)"

I left your little smiley in for you. I see it's your little security
blanket.
Do you think you really needed to type "Duh"?
Again, your insecurities lead you to putting down others.

ANOTHER QUOTE
"A General with 13word code... Really impressive..... Not! ;)
Try for Extra with 30, dude...
Now go out and Dentron some more bad-guys, Dentron-Man!
But be sure to cancel your inappropriate cross-posting first."

Now you resort to personal attacks. Is General 13 a bad thing?
My question to you is... what are you? Moreover, does that make you
better? I didn't realize this was a contest! A definite insecurity
problem.

YET ANOTHER QUOTE
"I don't know the answer, banjass... And I'd be willing to bet that
you
don't either...
For some really strange reason, the people who act like they know the
most
are usually the ones who "have no clue..." The real experts dont
usually
need the ego-fluffing you types get from putting others down."

banjass?... i am betting you thought that was smart of you.

Your last sentence... LOL This you to a "T" LOL
I couldn't have said it better!!

I have noticed that you have a little quote that you like to use
regularly...
"Think man, think.."
I am guessing that your father repeatedly told you this from a young
age. It seems to come up a lot!

I don't feel you are a stupid person, I think that you just need
someone to pat you on the back occasionally.

You sometimes seem to know what you are talking about, but you always put that one little thing in your sentence or paragraph that diminishes the person you are talking to.

Try to give a person a helping hand without pinching him while he is getting up.

The problem is that they have too many people on a node.
A node consists of a calculated number of square city blocks. When
the node is being used to the max, it can be split up into smaller
nodes.
This is where you have to hound your cable company!

[This followup was posted to alt.ham-radio.am and a copy was sent to the cited author.]

Well, sort of! I asked the fellow at QRZ.COM to restart the e-mail list, "HAMTRANS". Some of you (like me) may remember it. I never was able to take advantage of it, apparently because it was poorly moderated, and some W7 something-or-other ripped off a bunch of folks. Well- I'm not here to rip anyone off- and I hope there are others who, like me, enjoy buying, selling, trading, swapping, whatever, amateur-radio related items, some of which are too large, too heavy, or bulky, and it is unreasonable to ship these items. Maybe it's a small item, but perhaps you can can't afford the shipping due to fixed income, but want it, and the shipping just pushed you over the edge of being able to afford it? Well, we all need to help each other!

When you plan a trip, please try to post your itenerary to the list if you don't mind transporting an item along your drive path. If someone is buying an item, and lives along your drive path, they will contact you and ask for your assistance. In return, other list members will make offers to transport items for you sometime (we hope this is the way it's going to work).

Now- some VERY simple rules:

1. Don't expect the transporter of your item to box it up for you. Your seller should have your item ready to transport, JUST AS IF IT WERE GOING TO BE SHIPPED UPS. This will offer some protection against scratches and damage during the shipment, and will help your driver not get muck all over his/her vehicle or ruin the interior (we hope). If damage occurs to your driver's vehicle by your package, you should voluntarily pay for the damage. I sincerely hope that any damage claimed would be so obvious so as not to leave any room to debate cause and effect so as to avoid a lawsuit, but any problems are between YOU AND YOUR DRIVER.

2. Don't expect your driver to make a side-trip off of his/her anticipated drive path. Have your seller meet them along the interstate.

3. Get your seller and driver together on a sked utilizing whatever means possible so that nobody has to sit at a gas station waiting for someone to show up that never does, or is an hour or so late. If your shipper misses his drop to your driver- you may not get a second chance! If your seller fails to meet the driver on sked or can't make the drop, it's up

to *you* to make other arrangements. We in amateur radio work on an honor system. Don't screw it up for everybody!

4. Meet your driver delivering your goods to correlate with his/her drive plan. Don't make him/her go out of the way to meet you! You're the one in the shipping predicament, *NOT* your driver! If your driver is going one state away from your location, perhaps you at least got the item from the "other" coast, and YOU will have to drive to meet them!

5. Understand that this list is in no way responsible if you trust the "wrong" person. There are schmucks in every walk of life. If they rip you off, you should seek help from the police, NOT FROM THIS LIST! (Except to inform the rest of us not to trust the jerk that ripped you off!)

6. Mis-scheduling on your part does NOT constitute you being ripped off! You should be willing and able to pay shipping for your item from your drivers destination back to your location if your paths fail to cross as scheduled. And keep in mind that you will be paying for UPS (or whomever) to come out to your drivers location with a "call tag" so it doesn't inconvenience your driver by having him locate and drop your package at a UPS drop point.

7. IN BIG CAPITAL LETTERS! THIS LIST IS IN NO WAY RESPONSIBLE FOR ANYTHING RELATED TO WHAT HAPPENS TO YOU AND IN NO WAY GUARANTEES THAT YOU WILL HAVE A PLEASURABLE EXPERIENCE WITH SHIPPING A PACKAGE OR THAT YOUR PACKAGE WILL EVEN ARRIVE VIA THE HAMTRANS NETWORK!!! IF YOU RECEIVE A BOX OF BRICKS INSTEAD OF THE RADIO YOU PAID FOR, THEY WILL BE YOUR BRICKS!!! THIS LIST IS NOT YOUR PERSONAL BABYSITTER! YOU ARE PRESUMED TO BE AN ADULT AND IT IS PRESUMED THAT YOU CAN TAKE CARE OF YOUR OWN PERSONAL AFFAIRS!

8. If you are dis-satisfied, SEE RULE NUMBER 7!!!

If you find this e-mail list interesting, you may subscribe to:

HamTrans@qth.net

As I am not well-versed in e-mail lists, even though I requested the creation of the list, I believe that to subscribe, you send an e-mail to:

majordomo@qth.net

with a subject line of:

SUBSCRIBE HAMTRANS

If someone else knows better, they can correct me. If you have comments, suggestions, or whatever, please remove the NO before the @ and the SPAM after the @ in my e-mail address to reply. E-mails sent without taking care of these two minor details will be bounced. If you can't figure out how to click and use your backspace key in the address box, you probably don't need to be reading this in the first place. Comments to the newsgroup may or may not be read by me. I'm a busy person.

73 all, and I wish you each a Happy Holiday Season!

In case you're looking, the NMEA output connections for the eTrex are
under a rubber flap at the top rear of the case.

There is a third-party source of do-it-yourself connectors to mate with
the eTrex and eMap receivers. A web search for "purple open project"
or something similar should find it.

I'm still eagerly awaiting the mobile/base rig they showed along with this one at Dayton last May. 160 through 440, real dual-band operation, with APRS, in a package similar to the IC-706. Oddly silent on that one - maybe they canned it??? I hope not.

I had a similar experience with a lamp in my daughter's bedroom.
After fiddling with it for several months, I finally performed the William Tell Overture mod on it.

What is the William Tell Overture mod you ask???

Well, just think back to when you were a kid watching the LONE RANGER and listening to the opening music

(hum the first few bars and you'll get it) :

To the dump! To the dump! To the Dump,Dump,Dump!!!
Hi-ho Silver and away!

PS. the WTO mod cost me $67.49.

$1.49 for the gas to drive to the dump
and
$61.99 + tax for a new fake Tiffany lamp at Home Depot!

Seriously, now these lamps are just so sensitive to stray RF, and so cheaply made that you just can't mod them economically.

Sorry to burst your bubble,

73

I was kind of upset about it at first, but after reading through all
the Ebay rules about it, I guess I can see their reasons. One of the
guys the was bidding on it knew that it would probably get pulled, so
he wrote down my email address before it got killed off and contacted
me about it. I still end up selling it, but indirectly.
Oh well, I guess it was a good learning experience since I am using
Ebay a lot more all the time now and don't want to get myself on the
list of banned people!

Really!...not in Canada, one can guess why the restriction though...I think it's the Clipperton linear amp that has a choke in the final to prevent transmission around 10 meters somewheres (maybe the whole band?...)

Any one know of good software to program memories in a IC-706MKII or IC-706MKIIG? I have heard of some that are not alpha capable, but have misplaced the info. Any good ones out there? Alpha not necessry but would be nice.

CJ,

I bought one of these at the Shelby, NC hamfest last Sept. Very clean and GC for $40. I would expect that they might go for 40-75 bucks depending on a number of factors. You can still get the remote heads for them and they are not exactly "outdated" Don't take my estimate as the *gospel*, but the range would seem fair to me if it is nice. I bought mine as a companion for my 706.

4462. YAESU FT 290 & 690 multimode porta-mobile 2&6m

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-28 00:00:00 UTC
From: Joe Davoli <jdavoli@erols.com>

Hello all, I have for sale a fine pair of Yaesu portable / mobile 2 and 6 meter multimode rigs. Here are the details:

The FT-690 R II is a 10w (2.5w on battery pack) mobile / portable rig that covers the entire 6 meter band in FM, CW and SSB modes. It weighs 1.2 kg less the battery pack. A included linear amplifier (Yaesu 6020) clips to the back of the basic unit to provide SO-239 antenna jack and external power cable. An optional (see below) battery pack will clip in place of the linear to provide true portable capability. When the battery pack is in place, a front panel BNC connector may be used with the appropriate antenna for the mode. The original telescopic whip with base spring / coil is included. I have used this rig as a mountaintop portable with excellent results, using a small, simple 6m dipole. During field day last year, I made several DX FM contacts with it as well, using a 6m J-pole (made with "window" line) suspended in a tree. To say that the receiver section in this unit is "HOT" would be an understatement!!

The FT-690 R II is in STONE MINT condition. It includes the box / all papers / all accessories (Power cord, linear amp, mobile bracket, original up-down DTMF mike, portable whip antenna.) It ALSO includes the optional FTS-7A CTCSS tone squelch board, which really rounds out the package (PL on TX or RX & TX.....you select!!) I'll sell it alone for $325, or at $375 with soft case and battery pack. The unit (less case, battery pack and tone board,) sells new for over $650, so I am offering quite the deal here!

Now for 2 meters, I have the "twin" to the 690, a FT-290 R II. Identical to the rig above, except is multimode two meters. The clip-on linear gives you 25 watts FM / CW / SSB, and again, 2.5w with the battery pack (9 "c" cells,) Same as the 690, it features two VFOs, selectable mode-dependent channel steps, 10 memories for frequency, mode, repeater shift and tone status. Split frequency semi-duplex operation between the two VFOs is provided, as well as one touch reverse for split memories and standard repeater splits. Scanning features include manual and automatic up-down band, memory and selective memory scanning from the tuning knob or supplied mike, plus priority channel monitoring of ANY memory while operating or EITHER VFO, and programmable memory scanning between memories 1 and 2. An ALL MODE noise blanker and clarifier control are included, and semi break-in QSK is provided for CW. These rigs are feature-packed!

The FT-290 RII is in very good shape, with a couple of minor paint scratches on the bottom of the case being the only marks on it. The front panel is near mint. There is no box or power cord with this one, but all papers (manual, schematics, tone board guide) and ALL original accessories are there; up-down DTMF mike, portable rubber antenna, linear amp and mobile

bracket. There is a SECOND FTS-7A tone board installed in this rig, so PL capability is here as well!! I'll let this one go at $325 alone, or $375 with the battery pack and soft case. Again, sells for over $650 WITHOUT all of the options.

I'll make quite the deal if you want both rigs. I have only ONE soft case and ONE battery pack, and ONE power cord so BOTH rigs, one case and one battery pack I'll let go for $650!! Otherwise, the battery pack, soft case and power cord will go to the first come. I'll ship individual rigs insured for $10
anywhere in the Continental U.S., and split actual shipping with the lucky buyer of both rigs. Please let me know if you have any questions, and thanks for reading!

4463. Attention Myrtle Beach Home buyers and sellers: WARNING about RE Agent KARL MOSER, KE3NF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-28 00:00:00 UTC
From: Paul <pvanasse@direcpc.com>
Message-ID: <lrYU5.4369$925.196895@news.direcpc.com>
Source record: 68265

Attention to all interested. I answered and ad (link below) from Karl Moser, KE3NF for a $150 radio he had posted for sale on this newsgroup. I mailed him the funds 1 day after he posted this item for sale on 10/26/00. He then cashed the funds on November 1, 2000. I have yet to receive my mechandise or my money back from him. I have spoken to him 3 times at his Barnhill Real Estate office in Myrtle Beach South Carolina which he reduntantly states that the items or my check will be returned. The last conversation I had with him was 9 days ago which I still have received nothing to date. (16:45 11/27/00)

Yesterday on 11/26/00 I filed Felony charges with the United States Postal Service for Postal Mail Fraud and Postal Interstate Mechandise Fraud. I am also forwarding my Felony complaint to The Department of Business Regulations Real Estate Division in South Carolina because a felony conviction will result in the revocation of Mr. Mosers real estate license.

If Mr. Moser cannot be trustworthy enough with my $150 sale, do you think he is qualified to handle a real estate transaction worth tens of thousands of dollars to you. Please take my warning for what its worth.

Below is the link for the radio ads placed in alt.ham-radio.marketplace.

4465. Re: Ebay policy on 10meter radios

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-28 00:00:00 UTC
From: Bruce McLaughlin <bmclaugh@primenet.com>
Message-ID: <901pmijvu1@nnrp1.phx.gblx.net>
Source record: 68267

I seem to recall recently reading that the ARRL complained to the FCC about the incursion on the lower part of 10 meters by non-licensed, non-hams using AM. The complaint also included a claim that some of this could be encouraged or assisted by E-bay providing a ready source of such equipment. In turn, the FCC began making inquiries of E-bay and I believe specifically mentioned that the use of such equipment by unlicensed persons on the amateur bands was illegal and if it was found that the equipment was procured from E-bay, it might go after E-bay in much the same way it has and still does go after folks who make or sell amplifiers which can be used on the CB bands. I suspect the inquiry may have been enough to put the fear of God into E-bay to the extent it is being a lot more careful about becoming involved as an accessory to illegal operation.

Lafayette Model 223 Transistor Analyzer

OFF/ON switch
Lo-Pwr/Hi-Pwr and Sig-Gen/In-Ckt switch
Leakage Measurement:
Lo-Pwr: 2ma. full scale
Hi-Pwr: 80ma. full scale
Gain: X20, X50, and X100 switch
hFE (DC Gain) full scale is 40, 100, and 200
NPN/PNP switch
Has front panel socket and 3 leads red, black, and green, 16 in long,
w/clips on ends.
Has 80 ma current range and 12 vdc full scale meter positions
for separate current or voltage measurement
No manual for unit but complete hand-drawn schematics and
switch position charts with detailed explanations for
each test included
Provides DC out-of-circuit measurement and in-circuit GO-NOGO testing
Uses two size C batteries (included)
Unit is 6 1/2 in. Wide by 5 in. High by 2 1/2 in. Deep
.JPG picture sent upon request.

Will take $15 plus shipping

Because the people who run E-Bay are more concerned about bad publicity than selling Uniden HR2510s or 2600s. It's not a question of legality, it's a question of E-Bay policy as informed by a terrible FCC recommendation. You can buy, sell and use all these rigs, as long as it's not done illegally. Their decision on firearms sales comes from a similar philosophy. They don't care about legal ambiguities- they care about absolutely avoiding any appearance of impropriety. If you're getting frustrated, put it on Usenet.

All you need to be sure of is "NMEA" output. Any Garmin should work (I have the "III+" and it's fine). Direct rs232 connection, too. There is at least one "brick" style GPS (no display, just the receiver and a data cable) - one that I saw in QST recently for (I think) $69. Would have looked into that option more if I'd not already bought a Garmin.

In article <3a22e1bc.9811001@news1.lig.bellsouth.net>, no@available.com was of the opinion...

Do you think the "ETrex" has a NMEA output? I was looking the unit over today and I couldn't find any ports during a casual inspection. I will check the Garmin website. Thanks for your help.

Yes, the ETrex has an NMEA output. Garmin sells a cable to interface
to a pc for about $35 USD - their connector is proprietary, though an
ingenious soul may be able to kluge something to work.

4495. Ebay policy on 10meter radios

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-28 07:37:33 UTC
From: tegwilym@my-deja.com
Message-ID: <8vvnbt$6q5$1@nnrp1.deja.com>
Source record: 68338

I just tried to sell my old non-working Uniden HR 2510 radio on Ebay.
After about 6 hours I got a message saying that the radio was illegal
to sell since it is too easily converted to a high-power CB radio.

I am just wondering, how can legitimate ham radio shops sell this radio
(or used to sell it, if it isn't made anymore), also Radio Shack sells
a similar 10 meter radio? Is it legal to sell them in a store (where
they most likely won't even check that you are a licensed ham) but not
on an auction?
Maybe it is easier for bad CBer's to get radios on ebay and run illegal
high power CB radios? I'm not sure, anyone have any ideas on this?

I definately would NOT recommend this.
My D700A is connected direct to the battery (via the kenwood supplied cable). Typical accessory plugs do not have
a wire size sufficient to carry the full power current of the D700A.

Message-ID: <3a2540fa$0$35015$44a10c7e@news.net-link.net>
Source record: 68199

Saw one of these little beauties at ComDac in St. Joseph, MI today.
$759.00. Very nice looking rig--not quite 2x the size of the little FT-90R dual bander! Looks delicate however. Prongs on the heat sink are cast and could get broken rather easily in my opinion if banged on something hard. 3 piece vhf/uhf antenna, like the vx5r. I don't have a vx5r but the antenna looks the same--bnc connector with a small end for 2m/440 and a longer end for 6m. Very nicely manual. I thumbed thru it and it looks like the same format as my FT-90R manual. No case for the rig--just the shoulder strap. Comes with a nice mic--no touchtone. Comes with a DC power cord, a cool world DX map, a schematic, a nice Yaesu sticker and some wtty info sheets. I did not notice if it came with pigtailed accessory plugs like the 706 does.
Rig lacks feet. These can be added cheap enough, but a folding stand, feet and handle like an IC-706MKIIG has would have been sweet, also it would be nice for Yaesu to have made a mobile bracket. This way it could be easily mounted in a box containing a decent size battery and/or small tuner.
The unit was not powered up so I don't have any comments on how well it performs. Too bad you can't get about 20 watts out of the thing to use it with auto tuners/couplers (think they need about 10 watts to tune).
Any one have one?

4498. FS: TenTec Scout Station

Yaesu FL-7000 Solid State Linear Amplifier. Auto band switching and tuning with a number of Yaesu rigs. Works fine with other rigs as well. Built in antenna tuner. Works on 160-10 including WARC Bands. A few minor scratches nothing serious. Front Panel is clean.
$1300 plus shipping.

>ADMS-1E supports the VX-5R and to the best of my knowledge, you have to buy the
>whole kit to get the new software, but unless you plan to buy a VX-5R, the
>upgrade will be of no use to you.

RT Systems will sell just the new software alone - you don't need to buy
a complete kit (and end up with two cables).

Apparently one of the new features in the ADMS-1E software is the ability
to import frequency data from text files. This would allow you to manage
your frequency info in a spreadsheet or a database, export to a text file,
and then load into the radio. This would be wonderful, since ADMS-1 itself
is a really lousy database manager.

However, I haven't tried this - I only have ADMS-1C, and haven't decided
to spend the extra money yet.

Howdy,

My friend, K9IKQ, needs a manual for a Vista Model XXX 30-A power supply.

XXX is the actual model number!

Can anyone help?

Tnx & 73, Jack, K9CUN

4508. Would you trade your SP600 for a nice R-388???

Newsgroup: rec.radio.amateur.equipment

Well I am pleased that as a result of my complaint postings here, and on other NG's, I received both an email and a voice mail message from Mr. Moser, KE3NF last evening. He is again stating that my check is in the mail. We'll see how it goes before any charges are dropped.

I thank all of you on this group who had to bear witness to this dirty laundry being aired on this NG however I believe if it were not for the broad communications power of this and other groups, I would have never gotten any response at all. I am very sorry that the subject was out of topic for this group but I felt it was the only way to enlighted the accused with the scope and the seriousness of the subject matter.

Thanks again and 73

4512. Re: Can I attach my flat 12v FNB 12 nicad to the car battery to charge it?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-29 00:00:00 UTC
From: w8ron <w8ron@stratos.net>

Source record: 68214

Float charge voltage of a Ni Cd cell is 1.4 volts at room temp. With 1.2 volts
per cell nominal you have a 10 cell battery that will float charge at 14 volts.
Put it on the car battery. It will draw high current initially but not nearly
enough to blow up anything unless you hav an aircraft 32 AH monster that is
absoutely drained.
I know because I have a set that I use in the shack for emergency power.

I disagree with this. You might get away with it but you also might put the battery into thermal runaway. It depends on many factors including temperature. You should *always* use some type of current limiting - even if it's only a resistor.

4519. Alinco DX70TH power connector??

I am looking for either a full power cord or just the male connector itself. It is a 6 pin molex common to many makes of radios. www.powerwerx.com has them listed as part # HF-6. Here in Canada they are asking $50 for a power cable. I already have lots of #8 gauge wire, so all I need is a source on the connector. The freight from Powerwerx costs over 3 times more than the connector itself!!

Thanks,

Max VE3TMT

The real answer is "whatever feels more natural". Who cares what the other guy prefers?
I *prefer* thumb to push the dahs. Makes much more sense to me and feels more natural.
If you want to keep it 'standard' and you find that you prefer to thumb the dahs...learn to paddle left-handed (if you're naturally a rightie). Then (1) 90% of visiting hams can use your paddle w/o a 2nd thought, and (2) you can write and send at the same time (at least hold the pencil...in some operations that saves a lot of time/frustration by not having to put down pencil/pick up pencil/oops where did the dern thing roll off to/oh there it is/write/put down pencil/rolls on floor.....)

4521. FS: SMA-TO-BNC PROTECTIVE ADAPTER

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-29 00:00:00 UTC
From: gulyas@netzero.net
Message-ID: <904511rhe1@nnrp1.deja.com>
Source record: 68223
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

John, if this is the same transmitter you've been hawking for the past
two months, maybe you should try some other outlet. I won't mention
any names, but it rhymes with "Ebay". Just a suggestion.

Neil

I'm right handed and dit with the thumb on the right hand. I dash with
the first two fingers. I wouldn't worry. It doesn't matter how you do it
as long as it comes out right. There really is no wrong way as long as
the end result is ok. MK

Hello,

I'm wondering if any of you own and can comment on Cutting Edge Enterprises' "WorldPack" nylon protective travel cases for the IC-706 or FT-100. What is the quality of the craftmanship and does the case do a nice job as a carrying case for the IC-706/FT-100. Does the WorldPack give good access to the IC-706/FT-100's hookups? Power cable, mic cord, ext speaker?

thanks!

Jason

Personally Don, I think they're worth the price and so do a lot of other folks out here. Nobody was selling them for $2 at our "last hamfest". The local electronics parts house has them for $10 ea. but they do not have the nice rubber cover that Stephen's adapter has. And yes, they protect better than the regular adapters. If you had purchased one from Stephen, you would have realized that and acted a little more mature(maybe).

You might actually look at Stephen's web pages, where he has a picture
of the adapter. It clearly isn't just a standard SMA to BNC adapter
because of the rubber sleeve. Now, I can't say it's functionally
better because of that - I only own a standard adapter, not one of
Stephen's creations. But I'm willing to give him the benefit of the
doubt.

You appear ready to trash what he's offering without even bothering
to look.

Dave

Would anyone know how to ascertain the operating frequency of a mt-1000 by it's model #? Thanks

4531. For Sale: Icom T81A- Price Reduced Again!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-29 00:00:00 UTC
From: "Scott, N9AI" <scottm@nospam.mvp.net>
Message-ID: <sY6V5.498$ob6.37457@nntp2.onemain.com>
Source record: 68285

I have an absolutely MINT Icom T81A for sale. This unit, purchased in August, is like new and unmodified, with no scratches or mars at all. It comes with all original packaging- the box, manual and warranty card, etc. I'll also include in a SMA to BNC adapter. Coverage is as follows:

50-54mhz AM/FM
76-108mhz WFM
108-136mhz AM
136-174mhz FM
400-470mhz FM
1240-1300mhz FM

This is a newer model, so the keyboard expansion modification will not work.

Again, this is in absolutely mint, like new condition. I'd like to get $245.00 plus shipping. If you don't think this is a fair price, make an offer.

NOTE: Remove "nospam" in my e-mail address to reply!!! Auto replies will not work!!

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

John,
Service manuals and the like can be ordered through www.rciweb.com Tis is a
web site that is devited to the RCI series of radios and is a very informative
site. They have a CD ROM that you can order that has schematics ect on it that
is a very good tool.
Good Luck and 73 de KG4FET Sandor

The Squeal is a Slow AGC recovery problem. A common happening on that radio. In fact on some of the older HR2510's it was so bad you could always hear yourself on the speaker during transmisions. As for the Alternator whine, just get a Radio Shack power line filter. Has worked fot me!

Eberle123 wrote:

4539. Can I attach my flat 12v FNB 12 nicad to the car battery to charge it?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-29 00:00:00 UTC
From: Ed Soniat <ed@texas.gtri.gatech.edu>
Message-ID: <ghoy9y2hius.fsf@texas.gtri.gatech.edu>
Source record: 68293

If I have a flat 12v nicad pack (10 1.2 v cells) what is wrong with attaching
it to the battery and letting it rise to 12v, maybe with a resistor
to keep the current down.

Mine happens to be a Yaesu FNB 12 (600 ma) pack.

A charger that does this form 12VDC ro 120 AC cost about $70.

I have a lot of REALLY GOOD USED TEST EQUIPMENT for sale, VERY reasonably priced, at

http://www.fullnet.com/u/tomg/gooteesu.htm

I have lots of Tektronix oscilloscopes of all types (JUST GOT 33 MORE!), lots of 7000 and 500 series plug-ins (JUST GOT 50 MORE!) and mainframes, Tek manuals, lots of Hewlett Packard (HP) equipment, General Radio items, and many other manufacturers' test equipment and accessories, including some tube tester units, curve tracers, spectrum analyzers, noise/distortion testers, signal generators, meters, power supplies, etc. I also have a varied selection of new electronic components and used vacuum tubes/valves.

The equipment is all inspected and tested (by an electrical engineer (me)) in detail, and working, before being sold. Cleaning and minor repairs may also be done. ALL EQUIPMENT HAS A MONEY-BACK, RIGHT-OF-RETURN GUARANTEE. Any defects or problems that I can find will be noted in each item's description.

I accept credit cards (through Paypal (it's free)), money orders, personal or company checks, cash, gold, ...

Don't like my prices? NO REASONABLE OFFERS WILL BE REFUSED! Please, take a look, right now.

Thanks, very much.

4541. Re: Can I attach my flat 12v FNB 12 nicad to the car battery to charge it?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-29 00:00:00 UTC
From: Al Robinson <robinsona@rl.af.mil>
Message-ID: <3A252B98.CB1722C3@rl.af.mil>
Source record: 68295

Ed:

At an absolute minimum you will need a series resistor to prevent a major flash
and a blown fuse when you connect a "flat" battery pack
to a high current capability source like a 12v auto battery. Think about it, if
the FNB 12 discharges to say 4 volts and your
auto battery is a healthy 13.8 volts and you connect the two, that's 9.8 volts
drop across the wiring in the car. Lots of amps flow until either a fuse
blows or the wiring fries. A series resistor will prevent disaster, but is not
the ideal solution either. It should be sized so charging current is
10% of battery capacity, in this case 60ma. Problem is, as the battery charges,
this current drops and it takes longer to charge the battery.
The $70 charger probably charges the battery pack at a constant current level
throughout the charging cycle. That's why it costs $70.

I've been following this thread with interest. There's a CB shop in my area that sells HF rigs modified to work on the CB frequencies. The fellow running the place doesn't ask if you've got a license, only if you've got money. The one rig I bought from him went back the next day with typical CB'er induced problems. I bought the same thing with matching mike and speaker off eb*Y for $200.00 less.

Source record: 68279

If you are using a modem and regular line, you are probably stuck as the phone companies don't usually guarantee any speed on an analog line.

Now, if you had DSL, or ISDN then they guarantee it and would fix the problem.

However, it'd not hurt to call the phone company as the fencer should not interfere with the phone line. It takes quite a strong common mode signal to interfere with the signal across the lines.

I'd guess that there is a grounding problem, with either the fence, telephone line, or both.

If it's one of those *killer* "light bulb in line with the fence" and the farmer/rancher/whoever is using the building/service ground there is a good chance of developing enough of a difference between the hot and ground for the telephone to create problems just about all the way to the switch gear.

I never had problems even with the old "weed choppers". Well, they'd really rattle your teeth if you got hold one.

I had a farmer behind me (back in the 50s) with over two miles (closer to 3 miles) of electric fence.
I'd only hear it when the fence was shorted, so he was happy to have me call. That might prevent lots of cows and horses from getting out.

As I said for digital interference on the phone line it should take a whale of a signal, unless the fencer has some common connection to the phone line such as a ground.

A good electric fencer properly installed should eliminate the problem.

Thanks for reading this.
Could anyone out there who has and is still using a Standard 528 dual
band handy, make me a copy of the manual please.
This is for insurance proposes as mine has been recently stolen.
So, if anybody is offered a Standard 528 with no battery pack and aerial
and is damaged by the fact that a battery pack will not 'clip' onto the
bottom
of the radio because the casting is damaged,
please let me know.
Regards,

Hello !
I'm looking for any software that uses the soundcard to filter
the audio. Something like those external DSPs that have a special
hardware for interfacing and use in your PC, instead of that just
using the sound card.

Thanks in advanced

The real question is `Where is the tuner going in the set up?' If you
put the
tuner between the feedline and the antenna then yes it will help to
lower the
SWR in the feedline and present the rig with a purely resistive 50 ohm
load.
If, however, you put the tuner between the rig and the feedline, you may
well
find that the feedline starts to radiate more and all sorts of equipment

will
suffer from the RF.

The 'Smarttuner' comes in a nice weatherproof box and can be mounted at
the
masthead (base of the vertical in your case). If you are currently
getting
and SWR of more than 2:1 in any part of any band you use it will make an
improvement. It will tune up a random length dipole on all HF bands.

Generally, I don't believe there are dumb questions, only dumb answers. The
short answer is "no."
>
>From everything I have read about antenna theory and antenna tuners the

>it cannot "adjust" the resonant frequency of the antenna, as far as overall
>efficiency, raiation pattern, directivity, etc. Is this correct??

The tuner (if properly adjusted) will reduce the SWR on the line between the
transmitter output and the tuner input. The SWR on the line between the tuner
output and the radiator is unaffected. The "modern" implementation of the
typical tuner is a C-L-C t-network that has little, if any, rejection of
harmonics. It is correct that the tuner cannot affect the radiation pattern of
the radiator.

>
>The antenna tuner cannot "tune" the antenna to actually be resonant for a

>inductive/capacitive devices such as traps, coils, etc. which will
>effectively change the electrical length of the antenna and allowing it to
>operate at "resonance" and maximum efficiency over a certain ham band.

It is instructive to think in terms of an antenna "system." The system is
composed of the physical radiator (and any objects in the vicinity), the
transmission line and any matching devices (tuners, traps, loading coils, etc)
that are used to bring the *system* into resonance. Each and every one of these
devices has some loss resistance associated with it.

If the physical radiator is not naturally resonant, and/or of the correct
impedance to match the transmission line, then other components must be
introduced to effect the desired system resonance. The selection and placement
of the additional components is the key to good system design.

Some of the factors to be considered are: efficiency, cost, size, weight, operating convenience, et cetera.

As you have observed above, the manufacturer of your antenna has introduced traps to bring about resonance on several bands. It is hoped that he has selected and placed these in an optimum fashion to achieve maximum efficiency for his part of the system. Probably from a maximum efficiency consideration, he has failed, because he must also consider cost, weight, wind load and so forth. Nevertheless, we give him the benefit of the doubt and move on.

>
>I cannot operate an end-fed wire as efficiently (i.e. with less loss) using
>an antenna tuner, as I can an antenna designed for that frequency, can I??
>A multi-band vertical is built to be or act as "resonant" on each band. Can
>I still use an antenna tuner with the multi-band antenna to lower SWR still
>further, or does this defeat the manufacturer's design ?

As I stated earlier, every part of the system has some loss resistance associated with it. Ideally the only loss we desire is the "radiation resistance" of the antenna. Let's establish a rule of thumb: The fewer additional components introduced into the system, the better.

>
>If an antenna tuner actually "tunes" the antenna to resonant frequency, why
>spend all the money buying Multi-band antennas with all their traps, coils,
>capacitors, and inductors. Why not just go out and buy a much cheaper long
>wire, and tune it with the antenna tuner??

Again, it comes back to the selection, placement and number of the components that are required to tune the system to resonance. I like to think of the system as a big network of C's L's and R's, distributed over the distance from the transmitter to the radiator. Everywhere in the network are different impedances, voltages, circulating currents. Generally speaking, the major losses in the system are due to the circulating currents through the loss resistances of the various components. The more of these components and the higher the operating Q, the higher the loss.

A simple example: Assume bottom-fed vertical monopole that is physically shorter than 1/4 wavelength. The feed point impedance will be a capacitive reactance that can be tuned by introducing an appropriate inductive reactance, ie, a coil.

The coil can be placed anywhere along the length of the radiator and still bring the system to resonance. For the sake of discussion, assume that we can construct a coil of any desired inductance that has a constant Q. It turns out that putting the coil at the feedpoint requires the smallest inductance but because this is the lowest impedance point, for a constant power input, the current is greatest here.

If we move up the radiator, it takes a bigger inductor to resonate the system but the current is lower. The limit is reached at the top of the radiator where we need infinite inductance but have zero current. It turns out that somewhere around the middle is the optimum, balancing total loss resistance against current.

So you can see that even with just one component used for matching, where you place it makes a difference in system efficiency.

There are those that will argue that traps are "lossy" and a better solution is a non-resonant radiator and a "low-loss" line and tuner. The problem is many of these folks don't examine the line and tuner losses completely.

Let me shamelessly suggest that you visit:
http://www.azstarnet.com/~n7ws/index.htm
and read the ladder line stuff for more thoughts on this.

A small incandescent lamp in series will not only serve that purpose but
provide a gross indication of charge.

4569. FT100 vs 100D

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-30 00:00:00 UTC
From: Old Biker <enfield@3n.net>
Message-ID: <3A26A9ED.728DF51F@3n.net>
Source record: 68167

I'm considering either the plain vanilla FT100 or the new "D" model, which costs $150-200 more. I can easily live without the "D's" CW filter and CTSS tone squelch but am unfamiliar with the "TCXO High Stability Reference Xtal" and what it adds. Assuming the rig is stable enough for SSB QSO's and for repeater ops on 2m & 440, will I need the "TCXO High Stability Reference Xtal" for packet or what?

I have both an FT-920 and an FT-100. I put the TCXO in the 920, and it has worked as advertised keeping the 920 within 10 cycles every time I have checked it. I didn't put the TCXO in the FT-100 (yet), and find that it varies between right on and 100-500 cycles high depending on how long it has been turned on.

I like having my base rig dead on frequency if for no other reason than personal satisfaction. However, I have found that most of the people I have had QSO's with are between 50-200 cycles off anyway. In the mobile, I tend to tune to the caller and don't pay a lot of attention to my frequency so I haven't really missed the TCXO in this case. Unless your FT-100 is way off, the TCXO is not really necessary for typical mobile SSB operation, but for the more frequency critical data modes it would be a good upgrade.

Guess my meter is wrong :)

It shows 2-3 amps on 10 watts
5 amps on 45 watts..
I bought 1 new and 1 used but both show the same amps...
Makes me wonder if they are broken or my PS meter is wrong..

4577. YAESU FT-290 R II 2 meter multimode porta-mobile

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-30 00:00:00 UTC
From: Joe Davoli <jdavoli@erols.com>
Message-ID: <906mcf$k3a$1@bob.news.rcn.net>
Source record: 68175
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

Hello all, I have for sale a Yaesu portable / mobile 2 meter multimode rig.
Here are the details:

The FT-290 R II is a 25w mobile / portable rig that
covers the entire 2 meter band in FM, CW and SSB modes. It weighs 1.2 kg
less the battery pack. A included linear amplifier (Yaesu FL-2025) clips to
the back of the basic unit to provide SO-239 antenna jack and external power
cable. An optional (not included) battery pack will clip in place of the
linear to provide true portable capability. When the battery pack is in
place, a front panel BNC connector may be used with the appropriate antenna
for the mode. The original rubber helical whip is included.

The FT-290 R II features two VFOs, selectable mode-dependent channel
steps, 10 memories for frequency, mode, repeater shift and tone status.
Split frequency semi-duplex operation between the two VFOs is provided, as
well as one touch reverse for split memories and standard repeater splits.
Scanning features include manual and automatic up-down band, memory and
selective memory scanning from the tuning knob or supplied mike, plus
priority channel monitoring of ANY memory while operating or EITHER VFO, and
programmable memory scanning between memories 1 and 2. An ALL MODE noise
blanker and clarifier control are included, and semi break-in QSK is
provided for CW. These rigs are feature-packed!

The FT-290 RII is in very good shape, with a couple of minor paint scratches
on the bottom of the case being the only marks on it. The front panel is
near mint. There is no box or power cord with this one, but all papers
(manual, schematics, tone board guide) and ALL original accessories are
there; up-down DTMF mike, portable rubber antenna, linear amp and mobile
bracket. It ALSO includes the optional FTS-7A CTCSS tone squelch board,
which really rounds out the package (PL on TX or RX & TX.....you select!!)
I'll let this one go at $325. Sells for over $650 WITHOUT all of the
options.

I had the 6 meter twin to this radio, and JUST sold it. The buyer wanted
the battery pack, soft case and power cord I had been using for this rig, so
he got them. These accessories are readily available at AES and other
dealers, or through Yaesu, and make quite the nifty Search and Rescue /
mountaintopping portable setup. The power leads coming out of the rig (with
linear attached) are terminated in standard automotive male / female "push"
connectors, so you can easily make or adapt a power cord.

I'll ship this radio fully insured for $10 in the continental U.S..
Please let me know if you have any questions, and
thanks for reading!

I also think that they are fine. Especially with my small ICOM R-2 with a telescopic whip. I have already destroyed one adapter by putting the rig in my pocket as I sat in a car, and I was glad that the adapter sacrificed it's life rather than my rig's SMA connector.
Regular NG readers will notice that Stephen only advertises via posting at 4 month intervals or so.
I have no problem with that at all. Especially since his adapters are quality products.

Well, I'm not sure if this is what you're looking for....

Use the Icom-supplied power cable & run it directly to the battery through the car's firewall. You can run it through the firewall where there's a rubber plug, such as where a wire bundle goes thru, or where the speedometer cable goes through if your car has one of those (new cars don't). Poke a hole in the rubber and pull the wire thru, then seal it with silicone glue. Hold the cable away from things with zip ties. Solder (don't crimp, solder is much more permanent) some ring terminals on to the wires so that the wires can be easily removed when the battery needs to be serviced/replaced. The ring terminals need only be as large as the bolts that hold the battery cables in place (in my case, 3/8")

Get the separation cable so you can mount the radio anywhere and put the control head up front where it's easy to reach & see.

Ground the radio. There's a ground stud on the back for this purpose. The ground wire goes to a good metal ground anywhere. My 706 didn't work right on 20 m until I realized I forgot to ground it. Then it worked fine.

4582. Re: ADSM-1D versus ADMS-1E software features (upgrade)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-30 00:00:00 UTC
From: Don Williams <kd6uvt@arrl.net>
Message-ID: <B64C73F7.8A9%kd6uvt@arrl.net>
Source record: 68180

The different ADMS version software seems to be for different radios, no later versions of software although that ma not be true for all.

Check their web page at http://www.yaesu.com/amateur/soft.html

What I found there is :

ADMS-1E.....For the VX-5R, VX-1R, FT-10/40/50R, FT-50RD and FT-11/41/51R handhelds.
ADMS-1F.....For the VX-110 and VX-150 Handhelds.
ADMS-2D.....For the FT-8100R, FT-8000R, FT-8500, and FT-3000M Mobiles.
ADMS-2E.....For the FT-2600M and FT-90R.
ADMS-3 ....For the VR-500 Receiver.

I would be interested to know if someone has used the different versions on the same radio.

4583. Yaesu FT-50 RX Audio Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-30 00:18:05 UTC
From: norwich_mn@yahoo.com
Message-ID: <Xns8FFBB4E13Bangthedrumslowly@63.208.208.89>
Source record: 68232

Have had my FT-50RD for about 2 years. No mods to it. Recently, I have very diminished audio on the station received. I turn up to full volume and can barely hear the station. Same when opening the squelch - very little audio. I turned on the button beep feature and have full audio to the speaker when pressing the buttons.
Any advice greatly appreciated. I do know my UPS man and the address for Yaesu in California but will delay that suggestion for now.

I have a friend who modified a CB to work on the Ham bands. He had it in his truck and since it was just a crappy old CB, he wasn't worried about someone breaking in and stealing it. I think it worked pretty well too! But of course he was stuck at a maximum of 5 watts instead of the 25 watts you could get out of the "illegal Ebay" HR 2510.

Probably not much. (You'd most likely end up talking mainly to illegal cb'ers.) MFJ makes a number of SSB transceivers that operate on single bands -- they have a 10 meter model with 20 watts that sells for about $250 (model 9410x; it would be at their web site). I believe Radio Shack also sells a 10 meter mobile transceiver for $150 to $200 that runs on SSB.

At these prices, it would probably be as cheap as or cheaper than trying to modify a cb rig.

Good luck!

Jason has been reading my mind. I am also curious about these packs. my biggest concern is proper ventilation. It appears as if the fan is blocked, and the radio itself is encased in an insulator (pack). How is heat build-up dealt with?

Message-ID: <20001129203919.07527.00004263@ng-cs1.aol.com>
Source record: 68235

Greetings!

Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one!

For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig!

I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers!

Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty!

It is actually a darn good rig at a good price.

Personally I'd take it, but with four HF rigs already, married thirty years,
I'll pass. It isn't worth a divorce.

I am looking at bidding on a Yaesu FT-2200 on ebay. Could anyone
comment on this radio before I make my descision please. I wanted a
2m/440 bit my budget is 200 or less and the dual bands seem to go from
350 and up.
Thanks

Ok Guys,

I have one. It is well sewed and made of quality materials. The
various adjustments allow you to have it fit snugly or not as you
prefer.

There are several pouches so you can stow stuff in such a way as to
not damage the display. It even has a cute little microphone pouch.

Since all of the little HF radios have fans or big heat sinks in back
and you can leave the back of the thing open I guess it would not
over heat. Why you would not take it out of the case to operate
is beyond me.

I also bought a case for my VX-5r from this outfit which I will report
on if they ever see fit to send it to me.

Bottom line reasonably nice stuff if you get it.

I have 1E I have the ARRL repeater directory. You pick a route you
generate a repeater list you save said list as a export to radio file,
you import it into ADMS it loads the repeaters to your radio.

If you travel allot you will find it useful. Not the most intuitive
software (ADMS) I have ever used but when you figure it out
your biggest problem will be trimming the repeater list.

If you buy the update you get a 3 to 4 adapter for the programming
cable. If you buy the whole thing you get the cable level converter
thing. BTW you can use the programming cable to control your
IC-706 just buy a 3.5mm stereo to mono adapter at the Shack
of the Rat and you're good to go. I use my cable all the time.
I tell you this as it make the extra ADMS cable more marketable.

I've got a General Instrument Surf Board, and it's quiet - I've unplugged it, and reconnected it to the mains, over and over, and I haven't heard a peep! I have had problems with my monitor, and with a couple of light dimmers in the house, but not a whisper from the cable modem. If you have the dosh to pay for it, I'd say do it now - you will wonder how the hell you dealt with snail - speed modems for so long!

I just installed a computer next to my ham radio. I use an ICOM 738
and the compueter is a 486 with Windows 95.Yes some people still have
them and they still work, slowly.
SO on most bands I am getting noise interference, From all sorts of
beeps and bops to hums and sometime squeeks. The computer is the
source because I can make the noise go away if I need to by just
shutting the computer off.
Any suggestions as to how to make the interference go away?
Thanks for the help.

> Thanks in advance.

Many years ago, when I lived in an apartment for a short while, I ran a horizontal 5 element Cushcraft 2/440 yagi suspended about 6" from the ceiling with an extension from the existing ceiling light tubular rod that held the cover on. You can buy this rod in various lengths from most hardware stores, etc.

Simply unscrew the cover, remove the short 6" rod, replace it with about 15" of new rod. Then replace the light "bowl" and use a nut instead of the knurled button to hold it in place. This leaves about 8-9" of rod to mount the antenna to. I mounted it by drilling a 1/2" hole through the antenna boom, passing the rod through the boom, and securing it with the original knurled button from the light fixture.

The antenna weighed only a few pounds, and it never presented any problems from this type of mounting. Turn it via the "armstrong" method. I ran a 100 watt SSB rig through it and it worked very well. If you happen to have one of those hanging chain lights, you can even run the coax back down the wall using the existing chain hooks.

When the time comes to move, simply replace the original fixture rod, put the light cover back on, and nobody will ever know the difference.

73 and Good Luck de W6DKN

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

> What about a 20'' mag mount on a table?

Make sure it's a metal table. A metal desk or metal filing
cabinet works. You need a ground plane for a mag mount.

Source record: 68051

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

In my second floor condo I use a Cushcraft 270 standing in a corner
hooked up to the Yaesu 5100 putting out 50w. In the bedroom I have
a RS HTX-202 on a 13v power supply hooked to a MFJ roll up J pole
putting out 5w. In the living room I have a Kenwood TX-28A with
a hotrod antenna also on 13v and putting out 5w. All work well into
local repeaters. The Kenwood will not make the repeater without the
hotrod on it's internal battery. With the hotrod it will when the
battery is fresh. On 13v it will make it with the rubber duck.
I bought a three element beam (MFJ) but the J pole works better.
The mag mount would be better on top of the fridge or some other
metal object. The RS HTX-212 in my truck with a mag mount works
well on the cab but wouldn't work on the fiberglass camper shell
even if it would stick. 8-)
I've not noticed any problems with 50w but 5 is usually enough.
Maybe the green pin feathers I've started to sprout may be a
side effect?
I would put the antenna as far away from your operating position
as possible. You could poke a hole in the ceiling of a closet and
stuff the 270 up into the attic. Unless there is another apartment
above yours. Might cause some hassles if so.

4609. Questions for Icom 756Pro owners

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-01 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <maQV5.34477$nh5.2313708@newsread1.prod.itd.earthlink.net>
Source record: 68054

How does one adjust the passband tuning on the Pro? Looking at the front panel photo on the IcomAmerica website, I notice there is no knob dedicated to that function, so I assume that you use some combination of button depressions and then use the main tuning knob for the passband tuning? Does the passband tuning function as on rigs of the past, i.e., does it allow you to effectively move the position of a narrow filter so as to peak CW signals that are slightly off frequency without having to resort to using the RIT?

I understand that some sort of ROM upgrade has been released in JA-land, addressing the shape of the default CW filters - is that correct? Are there plans to make it available elsewhere or will that change be incorporated into later production models? Is the effect of this change similar to what is achieved when defining your own filter and using the PBT to reduce the bandwidth as described on the Icom website?

Thanks for any info you can provide.

Thank you very much both of you for your advise. The questions I now have are what ant you guys recommend. Of course this depends on the bands I want to tx. Basically, what are the best HF bands to work on out of a car. The second consideration is that I live in NYC and I can have a 7' ant.
Also where would you mount the ant on a Grand Marquis considering the car's location? Finally, where did you install the main 706 unit? Is under the passenger seat a good idea?

Thanks again

Pet

Lafayette Transistor Analyzer---Model 223

OFF/ON switch
Lo-Pwr/Hi-Pwr and Sig-Gen/In-Ckt switch
Leakage Measurement:
Lo-Pwr: 2ma. full scale
Hi-Pwr: 80ma. full scale
Gain: X20, X50, and X100 switch
hFE (DC Gain) full scale is 40, 100, and 200
NPN/PNP switch
Has front panel socket and 3 leads red, black, and green, 16 in long,
w/clips on ends.
Has 80 ma current range and 12 vdc full scale meter positions
for separate current or voltage measurement
No manual for unit but complete hand-drawn schematics and
switch position charts with detailed explanations for
each test included
Provides DC out-of-circuit measurement and in-circuit GO-NOGO testing
Uses two size C batteries (included)
Unit is 6 1/2 in. Wide by 5 in. High by 2 1/2 in. Deep
.JPG picture sent upon request.

Will take $15 plus shipping

Hi Cecil,

How many magmounts do you know of that make an electrical connection
to that same metal desk or filing cabinet (or car roof top for that
matter)?

Got a balcony with a metal railing? That'd work. Mag mount atop a metal filing cabinet works too, just remember that any metal near the antenna (discounting the metal filing cabinet) will detune it.

Don't spray 50W of RF at yourself and the family at close distance. Use 5W.

If cable TVI becomes a problem, esp. on cable channels 18 or 19.... move the antenna.

Good luck.

Mike N5MJ

I've been waiting over 6 weeks now for the Heil headset they offer to anyone buying a new radio from them.

Back then they told me they would receive them and start shipping the 2nd week of October.

This week, they told me they expect to start shipping them in a couple of days. They were having trouble deciding who would handle the shipping (seems like a really bizarre reason for taking so long).

On the off-chance I was getting fibbed-to, has ANYONE received theirs???

<elIhatespamdowdy@home.com> wrote:

>There is a capacitive coupling to ground.

Hi Edward,

This goes without saying, but is this capacitive coupling from the radiator, or from the feed? Or in other words is this capacitor across the feed or in series?

As it stands, without a direct connection, yes there is certainly a capacitive load added due to the proximity of this sheet of metal, and as that sheet of metal must then serve as a circuit element, it necessarily needs to conduct as part of a network (that is through ohmic, metal connections to satisfy that half of the circuit). Thus my question, is there a direct, close metallic connection, or are these currents in the capacitance forced to find the long way back to the source?

A sheet of metal in the vicinity of an antenna is not a guarantor of fulfilling the function of a ground plane. If this plane is large enough (on the order of several many wavelengths, 10 typically) then it can serve as an improvement to low angle radiation, but that is a far field phenomenon and not a function of a ground plane per sï¿½.

There are far too many reports in this group of improved performance where radiators' feedpoints are tied directly to the sheet metal when they replace thru-glass or mag mounts.

Floyd, the two knows located at the upper right hand front of the 756 Pro, one an outer and one an inner are the passband tuning knobs...above them is the label TWIN PBT.....the PBT means pass band tuning. Typically you turn one knob in one direction and the other in the opposite direction to make the passband smaller....hold both together and turn in the same direction either CW or CCW and the twin passband acts as IF shift.

The way I understand, it's a capacitive coupling to ground at the feed point.

All of the VHF/UHF mag mounts that I have tried make an adequate
capacitive RF electrical connection. They work well with the
capacitively coupled ground plane and don't work well without it.

Is it true what I am hearing? That he takes a $2.00 adapter and puts a rubber sleeve on it and sells it for $11.95! Does make the rubber sleeve worth $10?

Just wondering.

A mag mount antenna for 2m/70cm will fork fine. I used one 2 years ago on an ironing board setup in front of a window on a 9th floor dorm room at the local university. The antenna worked fine with a 50 watt mobile unit at full power. Used this for some contacts while at the Dayton Hamvention. Everyone we talked to got a good laugh about what we using, but it sure did work.

Last year used a 5/8 wave 2m/6m mag mount stuck up side down on the drop ceiling panel supports as a ground plane. That worked fine, after a little tuning, with a new IC-706G a friend got at the Dayton Hamvention last year. Worked some 2m, and 6m stations. with that setup too. The 6m tuning was touchy however, got with in 6 to 10 feet of the antenna, and the SWR went to pot.

> etc. Personally, I'd homebrew dipoles and tape 'em to a window. As far as
> power goes, check the manufacturer's specs.

I have used a Comet dual band antenna in the corner of my ground floor apartment for the past 2 years just fine. They don't make the exact model I have any more, but the closest thing to it is the Z780 (4.5 dbi on 2m, 7.5 dbi on 70cm). Make up a simple mount to screw it in to, and add a few 20 inch radials around the base, and you are done. I also have a homebrewed 2m turnstile in the other corner for 2m SSB, and a 1/2 WL 6m loop hanging from the front room ceiling for 6m SSB. Most of the time I never have to run more that 10 watts to get in to repeaters 10 to 15 mile away. So far I have found any type of 6m antenna is touchy to tune inside of the apartment. The wavelength is so long that the antenna "couples" in to anything close by like walls, floors, and ceilings. The 2m and 70cm antennas are fine so long as you keep them about a foot away from the walls, water pipes etc.

What you have to watch out for with apartment hamming is:

1. Keep the antennas as far away as you can from the walls where the other renters have their TV's, radios, computers, etc

2. The vertical antennas may give real bad SWR readings if they are located near water pipes in the walls, and electrical wire runs.

3. If your building has a steel structure, aluminum siding, and or foil covered insulation in the walls. Now you need to think about window antennas or sneaking one outside some place.

4. Power level. Keep it down during the day, and early evening. I don't seem to have problems running higher power late at night because most people are in bed anyway.

5. Check your home electronics. Buy or use filters on your ham gear if the output is not clean enough where your home electronics are picking up harmonics from a 10 to 15 watt signal about 10 feet away.

Hi Cecil,

This says much, but answers nothing in regard to my comments to
Edward.

I have noted for years that mag mounts do indeed work, so do air
cooled resistors - either work to some degree.

As we are offering a newbie solutions to a difficult (apartment)
situation, it behooves us to not simply offer marginal answers where
simple solutions could easily resolve his problems. A mag mount may
indeed take care of it, but as you note by your proviso:
>They work well with the
>capacitively coupled ground plane and don't work well without it.
introduces the issue of what constitutes a good ground.

Even more of a pain is wiring the connector!

MFJ sells a pre-wired cable with the 13-pin plug on one end and open wires on the other end. It's about $10 - and definitely worth it for me to not have to wire it. The part number if 5213.

I am assuming that a metal disk, 1/2WL in diameter, would be the
minimum adequately functional magnetically coupled ground plane.
At VHF/UHF frequencies, metal desks, metal tables, and metal filing
cabinets are usually that large or larger.

Does you Merc have a box receiver hitch? If so, you can mount your HF antenna there, the adapters are available whereever you buy antennas. Lentinis has it.

Mounting any fan-equipped radio under the seat is a bad idea. I remoted my FT100 into the equivalent of the trunk. The wife's car has a remoted FT90 chassis in the trunk. My Bronco has the FT100 chassis remoted behind the rear seat. Neither gives us any problems.

Antenna types less than 7 feet in length are inefficient on HF... If you don't need 75 meters, the ATAS-100 would fit. Comet also has the CA-HV (or something along those lines), and there are always the Hamsticks and Hustlers. But if there's that box receiver back there, you'd be able to mount a screwdriver antenna without much hassle...several of my friends have screwdrivers mounted there on full-size mercs.

Good luck & 73.

4638. HTX-245 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-01 00:00:00 UTC
From: delano@hamradio.ftc.agilent.com
Message-ID: <975714386.785913@cswreg.cos.agilent.com>
Source record: 68083

Hi,

I recently bought a HTX-245. Overall it is working
just fine. I like it. I have two questions to ask
other owners.

1. Do you observer that the CH knob changes the
frequency by something different than STEP
size? For example, in the 146.52 to 147.585
range, the SETP size of 15 KHz works as
expected. But when the initial frequency
is 145.115 and the STEP size is set to 15 KHz
the radio does not just add 15 KHz. It
first rounds (mod 15) then adds 15 (so
145.115 + CH = 145.125). This STEP problem
takes place at any frequency that is not
divisable by 15. At lease in my area
(Colorado) repeaters begin at 145.115 an up.

2. Have you had any problem with DTMF tones
not being recognized by a repeater?

Thanks. 73.

Hello John,
I have owned the TL-922A for almost 15 years and very satisfied
with it. Well constructed. For CW operators it may be disappointing
since it only runs about 2000 volts and reduces the output of the two
3-500Zs to 750-800 watts. On SSB, Kenwood increases the voltages to
3000 volts and I am able to squeeze out about 1200 watts on 40 meters
and anywhere from 1000-1100 watts output on 20/15/10 meters. Kenwood
has discontinued production but it is still a very competitive
amplifier. Price range depending upon condition $700-1000. Almost
forgot, using it with a TH-7 triband yagi and two slopers (7mhz and
18mhz.) Because of Murphy's Law, I won't say that in the 15 years of
heavy to moderate to light use (deprogressive) absolutely no problems.

Newbie asks about working from within an apartment with 50 watts on 2M/440.

50 watts is WAY too much within the confines of an apartment if you don't want irate neighbors coming after you with tar and feathers. Also, that amount of power in close proximity to your eyes, brain and other soft tissues would do a world of hurt to you in quick order.

Five watts is more than sufficient even to access repeaters nearby. On a recent trip to Denver I used 3 watts and a 5/8 rubber dummy load to access several repeaters on mountain tops 15-25 miles away.

Buy a couple of SO-239 flange chassis mount connectors and build "droopy drawer" antennas for 2M and 440. No. 14 gauge solid copper wire for the verticals and radials. Vertical solders to the cup on the back side of the SO-239 and the radials solder to the four holes in the flange. Use a short length of RG-58 to PL-259 connector and you're in business. Just don't jerk on the coax as the vertical may pop out of its cup if not soldered in properly. [somewhere here I've got a cutting length chart for Antenna Specialist scanner antennas I used to put together for sale to fire departments/EMTs. Check to see if someone in your area has any of those or re-read the antenna compendiums for info on the 1/4 wave ground plane antenna. Form a small loop in the vertical and you can hang it from the ceiling on a swag lamp hook.

Mag mount antennas rely on the body of the vehicle they mount on top of to act as the counterpoise for the radiated signal. Tabletops won't cut it. At least put it on top of a fridge or a top opening freezer.

4645. Re: Newbie needs help with installing rig in car

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-01 00:00:00 UTC
From: "Bob M." <no@nospam.com>
Message-ID: <Xd%V5.698$HO4.130843@nntp3.onemain.com>
Source record: 68090

My installation was in a minivan (cargo-style, no rear seats, etc...) so where I mounted my radio is applicable to about 0.01% of the vehicles on the road...

That said, I wouldn't put the radio under the seat. Put it in the trunk. I put the control head above the factory am/fm radio using some bent sheetmetal (known as "roof flashing" I think and found in hardware stores. $cheap). The control head mounts to the upright side of the flashing, the horizontal side slides under the a/c vent and holds everything in place, no screws needed.

Depending on the antenna you're using, you'll need an antenna tuner. I use the Icom AH-4 tuner since it's plug-n-play with the 706. The AH-4 is slightly larger than the fully-assembled 706.

If this is the same as "morsematic", check
www.sarrio.com/sarrio/rsman1.html

also check www.w7fg.com if the MM1 manual might help.
Click 'catalog of manuals' then click on A (for AEA).

Hi Dan,

If you're using Windows 95 or above you might to look at Pacterm '98 release 1.4. It is a true windows 32 bit program, and will work with your TNC in Pactor mode with no problem.

Pacterm '98 is constantly being refined and developed, with a commerical company standing behind it. We have a demo that you can look at that lets you do full packet mode, as well as RTTY receive at http://www.cssincorp.com. The free 1.x upgrade policy means you'll not have to pay for any 1.x versions. Those who bought the program in 1997 havent had to pay for one upgrade.

It's also going to support PSK-31 in release 1.5, and will release a preview (i.e late beta) version of it sometime this month (if all goes well). It's in beta now, and reports are coming back very positive. 1.5 is a free upgrade for those who own the product.

http://www.cssincorp.com/pacterm is the URL.

Just send your old bad disks to MFJ. They'll exchange them for you I'm sure.

Besides, as I'm sure you are aware, the call sign ends up being embedded into the software with the first installation. If anyone gave you a copy, it would have their callsign and it would not be of much use to you.

> I'm out of sync with the rest of the world.

It's not a question of being '...out of sync with the rest of the world."
Dit and dahs sent - are dits and dahs received.

Some folks do do it 'the wrong way'.
Where it would matter would be when you operate at another station --
e.g., Field Day. Or, when a visitor operates your station.
Even then -- many keyers have a 'wrong way' switch ability to permit
the operator to use the paddles 'the other way'.

For me the 'natural' feeling is dahs with the thumb and dits with
the index finger. I seem to be able to 'switch' by myself -- after
twiddling with the keyer for a moment or two.
But, then, the sky is not blue on my world. <g>

I have read *hours* worth of "Apartment Antenna" threads from the various usenet groups via deja.com. I have one question for the group:

I'm new to all of this so please be kind.

Can I simply stick a oh, say a little Cushcraft AR-270 in the corner of my apartment? I would like to work 2M/440 on a Kenwood TM-D700A from inside. I can grab quite a few repeaters in my area from inside with my HT and a Comet SMA-24. What about a 20'' mag mount on a table? Would that work OK?? Is 50w too much to push out in a setup like this etc??

Thanks in advance.

I'm not specifically familiar with any of that equipment but the bottom line is that it all depends on how far you are from the machines you'd like to hit and the terrain and close-in obstacles between you and the machines. I can hit a couple nearby machines from anywhere inside my apt with just an HT with a rubber duckie. Right off a magmount antenna depends on the sheet metal of a vehicle to serve as a gound plane to opererate properly so forget the mag mount antenna. Any antenna designed to be installed outdoors on a tower or pole will include both the radiator and the ground system (radials or coaxial sleeve) and will work properly. A Ringo, one of the Larsons hung upside down from the ceiling, etc. Personally, I'd homebrew dipoles and tape 'em to a window. As far as power goes, check the manufacturer's specs.

Hi TJP,

The problem you are going to encounter is RF exposure. At 50 watts, you will need to give the antenna a minimum of six feet clearance, otherwise you begin to fry yourself and family members.

At five watts, or maybe even 10 I think you might be OK. I had a MFJ portable J-Pole that I used when I lived in an apartment, hung it up next to a window, hooked it to my five watt HT and away I went.

At 50 watts though, you really should get the antenna outside. Maybe you can put it on a balcony while you use it, then take it down afterward? That would be easy to do with a mag mount, and you could be inside with the antenna outside and have a wall between you and the 'tenna.

I don't believe that that reading can be correct 'Spikey'. Most VHF transistor
amps aren't much more than 50% efficient which would be like about 25 watts
output for 5 amps @ 12 VDC (gotta allow a few watts for the rigs electronics
besides the amplifier section. A lot of people get fooled by the RFs effect on
the metering used. (can make a big difference sometimes)

I can't look at his web site if he does not provide it (I have neither of the indicated magazine issues where it was supposed to have appeared). If you say its good stuff then I happily admit my guilt, but it certainly had "scam" written all over it (to my unaided eye).
A lot of junk finds its way here under "FA" and "FS" banners. Sight unseen, I can't imagine a rubber gasket, grommet, or whatever, being protective to any practical extent. The sound of it was reminiscent of those recent cellphone foam "rf protector" and the foil "range booster" items.

Admittedly, I suspect the whole SMA deal to be something of a calculated plot to sell all brands/types of those blasted adapters. Bet there aren't many folks who don't slap a BNC connector on there immediately - If for no other reason than to speed up connect/disconnect.

I accept your testimonials to him if you accept my public apology for being skeptical.

Source record: 68000

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:

Hi Gord,

Yet those who describe replacing a thru-glass or mag mount with a
solid metallic connection invariably attends reports of better
performance. (It also matches my experience.)

The following is a general response to those various posters that
responded to my queries.

And still no one can respond to the discussion of currents and return,
or where this capacitance falls in the circuit. A capacitor with one
lead open does not exhibit very much capacitance except through a
third body (which also remains un discussed). At best, the sheet
metal presents an intermediate plate, and by common experience this
appears to be a poor solution ranking down there with the radiating
dummy load that "always" matches.

Anyone know the dielectric constant of this magnet? Or, more
importantly, its dissipation factor at resonance? Given that nearly
every mag mount that I have observed appears to have the common
ferrous magnetic material bound in a vinyl disk, it would do well to
remember not all ferrites are benign substances transparent to the
passage of RF.

Thanks to all that offered suggestions concerning my preamp. I liked the sound of Jonesy's suggestion (W3DHJ), which was to yank all the preamp components on the original board and wire in a hamtronics preamp. Well, that's what I did, and it's fantastic. I installed it in the amp box last night and tested it on the bench, then installed it on the tower today and tried it out for real. Awesome results! You have got to love that kind of gain! 73 de KA1STZ Gerry

It certainly depends on frequency. Big problem on 160m. No problem at
all on 70cm.

The really wonderful thing about free enterprise capitalism is that HE
gets to charge what he wants (without the slightest regard to your subjective
views as to what it is worth) and YOU get to build your own if you don't like
his price. Get to work!

4677. TS-520S CW Filter Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-02 00:00:00 UTC
From: treynolds@my-deja.com
Message-ID: <90acr6$r8p$1@nnrp1.deja.com>
Source record: 68110

I have a TS-520S that I have used for several years and it has worked perfectly until recently. A month or so ago I noticed that on CW, with the 500 Hz filter working, that the audio sounded a little "tinny" (for lack of a better word). Then tonight, during the 160 meter contest, a local ham was operating at 1.840 MHz and he appeared to completely wipe out my receiver across the whole 1.8-1.85 MHz area. I say "appeared to" because when I switched the radio to SSB, and the CW filter switched out, the problem went away.

Any ideas?

Thanks in advance,
Tom

Will work on 18 MHz set to 21 MHz with about 650 watts out. Also covers
160 and a lot of amps of this same era don't. 160 is a band where
power can make a difference.

->How many magmounts do you know of that make an electrical connection
->to that same metal desk or filing cabinet (or car roof top for that
->matter)?
->
->73's
->Richard Clark, KB7QHC

All of them. The metal of the magmount is capacitively coupled through the very thin sheet of plastic intended to keep the magnet from scratching the automobile paint. I haven't measured it lately, but as I recall, you get several hundred pf of capacitance between the car body and the magnet, which at two meters is damned near a dead short to RF.

I have two SS-30M power supplys. They work very well on HF, VHF & UHF and mine both have 1/4" studs and nuts to connect to.

tjp <tjp@pobox.invalid>
shared these priceless pearls of wisdom:

From long experience...

1. Do *NOT* advertise with an external antenna who is balling up the TV picture on that 40 year old BW TV with a cardboard shield in the next door apartment. Keep a low profile or you'll have them pounding on your door every time the picture urps from ANY source. (Unless, of course, the TV is owned by that titsy blonde that you'd do ANYTHING to meet {;-))

2. The magmount on the fridge or the filing cabinet is by far the best solution for local operation. You aren't going to get DXCC from inside an apartment without a hell of a lot of gyrations that you really don't want to do. Besides that magmount can be used as a mobile antenna if you want to go on the road.

4703. Overload in SGC, SG2000 Powertalk Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-02 00:00:00 UTC
From: Michael Blake <m.b.blake@worldnet.att.net>
Message-ID: <nRaW5.5210$Ei1.350717@bgtnsc05-news.ops.worldnet.att.net>
Source record: 68136

Is it possible to reduce the gain of an MAR-3? I have an SGC SG2000 HF SSB transceiver that overloads quite badly when used on a large fixed station antenna. This is my second unit and several friends also use SG2000s. All exhibit the same problem on full sized HF antennas.

The configuration is a MAR-3 (RF Amp) driving a SBL-1 mixer into an MAR-8 (1st IF Amp). Is it possible to reduce the gain of the MAR-3 or should I replace it with a lower gain device like an MAR-4? The MAR-3 is the only stage that is not also used when in the transmit mode.

The receiver contains a 20dB attenuator which completely eliminates the problem but it must be engaged all of the time.

Or have you fixed this same problem, in an SG2000, in some other fashion? Sorry about the cross posting but I have not gotten many responses on SG2000 issues.

Still looking for the 'perfect' trade on this! Thanks to all who have made offers! I am still considering them!!

Greetings! Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one! For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig! I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers! Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty! 73 es gud dx de N9LXX~~~ R. Blaine Fox Beloit, WI

4709. Problem with Yaseu FT-902DM

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-02 00:00:00 UTC
From: Jake <kk5hy@geocities.com>
Message-ID: <2mdW5.4982$Mk.76102@news2.mco>
Source record: 68142

Hello,
I have a problem that just developed with my 902DM.
I just moved to a new house and the radio worked fine before the move so something happened then.

Here is the symptoms:
On LSB, USB, CW and FSK I don't hear noise from any band. I do hear just white noise. The noise also changes pitch when I switch to the different modes.
On AM and FM modes the radio receives fine.

If I put it on LSB or USB and key up one of my other transmitters I can hear the signal in the 902.

The radio seems to transmit fine in any mode.

Has anyone had this kind of problem? I'm thinking it may be something in the carrier unit board, but I'm guessing.

Thanks for any help,
Jake

4710. ADI AT-200 Deviation Control (which pot?)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-02 00:00:00 UTC
From: Neil Morley <Neil.Morley@btinternet.com>
Message-ID: <90bpea$4nj$1@plutonium.btinternet.com>
Source record: 68143

My local 2M repeater was recently modified to clip signals with excessive deviation and I have found since then my audio level is too high to access the repeater.

The AT-200 has several presets inside - here are my notes:-

R304 MDD Whats this?
R303 BST Toneburst level
R287 DT Deviation
R207 S S Meter
R284 H High Power Preset (5W)
R?82 M Medium Power Level Preset (2W)
R??? L Low Power Level Preset (0.3W)

Can anyone confirm the deviation pot is R287 (DT) so I can turn it down "on air" to the appropriate level?

Also, where could I obtain a schematic for the radio (is there one available electronically on the internet)?

Please email response to neil.morley@btinternet.com

Richard you might profit from some technical reading there...FYI when you sit a magmount antenna on any metal surface it uses the metal as a 'counterpoise' or 'ground'. That's why they're so popular, people use them on top of their cars as a very portable and convenient antenna. Every ham should have one, they're very convenient as an emergency antenna, stick it almost anywhere. (almost, I said!).

You don't need a direct connection (DC) when dealing with RF you see, ever notice those 'through the glass' antennas?.

>panel photo on the IcomAmerica website, I notice there is no knob dedicated
>to that function,

There are 2 dedicated knobs, one for each side of the passband. You can shift only one side, or shift both in either direction. It has a push button to restore the passband to default setting without shifting the knobs. You can also go into the filter menu and use the main dial to set the filter bandwidth to any width you desire and store the settings in 1 of the 3 filter memories for each mode.

I am running a Milcom UHF PA (150W) and am getting a terrible whine when the unit kicks on right over the channel. I suspect that it is backfeeding through the common 13.8V power circuitry but I need a bit of advice on how to get rid of it. When the fans aren't on everything is great.. when they kick on I get 600 kHz of noise over the repeater.

Suggestions? Thanks!

Maybe, but in my case, thats the way it worked out. I had one car where I had a larson mag mount 5/8 2m antenna on the roof with the larson magnet mount. "square looking deal" It worked fairly well, but after a period of time, I had to scrap the mag mount as I had knocked it off the roof one too many times and it was trashed. So I installed the same antenna onto the same exact spot except with a hole mount. I noticed quite an improvement in antenna performance with the hole mount. More than I expected. So in my case anyway it did make a difference. MK

Source record: 67950

Howdy Mike,
I had a 2000 and experienced the same problem. The SGC2000 is the worst receiver I have ever used when it comes to overload. I loaned the radio to a friend who is well versed in modern receiver design and he dissected the receiver front end and made several measurements. Some of the major design flaws are the first IF filter was about 10mHz wide and SGC uses a low level injection (+7dBm) mixer where most of the high end radios are using high level (+17dBm and up) mixers. There is also that crappy little front end amp you mentioned. The cost to upgrade the radio to the level it should have been was more than I wanted to spend so I sold it quick. 10M was almost useless on a good antenna because anyone within a few miles on 11M would completely block out the receiver. Another thing that annoyed me was I assumed the radio had a noise blanker when I bought it because it has a big button labeled "noise blanker". I found that there was no blanker and SGC lied to me for months claiming to be designing one. They then told me to spend $700 on the new power talk head which has a DSP blanker. Problem is the DSP is audio driven and the receiver still gets ripped up by ignition noise. The receive range is greatly reduced but the DSP fools you by muting the noise. I could go on but all this brings back bad memories listening to all the lies from Pierre, the president of SGC. Hope this shed some light on your problem, your not alone!
73, Mike.

>if you use the apostrophe you're indicating that something (which
>you haven't named) belongs to the '73'.

Not necessarily. The apostrophe is often used to indicate a plural of
a non-standard word such as an acronym, i.e. QSL's or even "73's".
This may be "right" or "wrong" depending on your biases, but it's
pretty common.

And if I send you Best Regards and do it more than once (say to your
whole family), isn't that "73's"?

IOW, get off your high horse. Go count the dimpled chad in Florida.

Source record: 68017

As a follow-up to my earlier message about my problem with the Yaesu FT-102, thanks to all who offered suggestions, all mentioning the relays.

In fact, the problem turned out to be associated with relays RL04 & RL05, but it wasn't the fault of the relays themselves. They just weren't being de-energised in Tx mode, effectively open-circuiting the Tx drive to the finals. My original problem was no receive, due to a dead 24V supply to the RF unit from RECT B. I replaced the 24V zener and

pass transistor Q03 but it turns out that this 24V supply also energises

RL04 and RL05 on receive, and should be grounded via Q04 on transmit. I replaced Q04 and we are now back in business.

Source record: 68022

Hello Paul:

It is very easy to legally deal with this situation. You may have noticed my previous postings on this and other NG's regarding my recent purchase gone-bad with a Ham who also happened to be a real estate agent. I was successful in getting a return check from him (however the funds still havent cleared the bank yet because it's an out-of-state personal check). Heres some simple steps your friend should take to be sucessfully recompensated.

1. Call the individual several times and demand your funds. If its a long distance or cell-phone call you will now have a written record of the calls on your phone bills.

2. Send the defendant a letter demanding your funds and mail the document using the US Post Office, CERTIFIED LETTER RETURN RECEIPT REQUESTED. On the top of this letter, before any text, put the following in bold print: "NOTICE OF IMPENDING LEGAL ACTION". In the body of this letter make sure you give the defendant a reasonable time to comply with your demands. (Based upon how far away the party is located. If he's one state away, 10 days should be plenty. If he's 3000 miles away, 30 days should be enough. You will now have a written receipt of the defendant receiving your demand letter.

3. If the accused is in a state thats easily accessed by you (ie. less than a 2-3 hour drive), call the defendants local courthouse and ask them to fax you a copy of a Small Claims Court Action Form and mail it back to them with the appropriate fee (this usually about $10). The court will then set a court date which they will also send a County of State Sheriff to serve the accused in person with the writ. If the defendant still does not comply go to court on the date set forth and argue your case in front of the Judge. Make sure you bring all of your records (ie. cancelled checks, phone records, mailing receipts, copy of newsgroup ad, copy of demand letters, etc.). If you do have to go before the court in person, you can now add any additional fees incurred by you to your original claim. (ie. long distance phone calls, mailing charges, court charges etc.).

4. If the defendant is in a state that is not easily accessed by you, which was in my case, go down to the MAIN Post Office in your area. You might want to call your local post office to find out which postal dept. nearest your location contains the offices of US Postal Inspectors. Then go down and file a written complaint with them. They will basically do all the leg work for you however it might take months because of their schedule. You still have to complete above Sections 1-2 and make sure you bring all of your records with you (as in above Section 3).

5. In addition to pursuing US Postal violations there are also US Statuatory violations can can also be invoked through your local US Attorneys office (if the accused is from out of state). These include statutes contained in the US Uniform Commercial Code (if the seller is a business), Interstate Merchandise, Internet Commerce Act, Interstate Bank Fraud, Deceptive Practices, Federal Taxation Act of 1935 (I love this one because you sick the IRS on him for not reporting the income he deceptively scammed from you, and if he does report the income, he has instantly become guilty of the Deceptive Practices Act, which is a Felony punishable up to 10 years in the big house. BTW ham radios arent allowed in Federal Prisons so a radio amateur can get pretty bored pretty fast) and there are many, many, more. It just takes some time and effort on your part. All of these same rules apply to Ebay purchases as well. Keep this in mind in the future.

6.And lastly, I did a Yahoo Internet and Deja-news search on the party to which I had the problem. I was then able to find out what NG's he hangs out on. I then posted my saga and warnings on those venues to make sure the problem hit home. I received a phone call within 1 day and a check from 700 miles away within 4 days of my complaint postings. I was fortunate that my situation involved someone who was a real estate agent because his real estate license would have been revoked in the state to which he lives if he was found guilty of the violations. Essencially, he had a lot to lose. Some folks dont really think they have much to lose until you throw the entire book at them, which I was always prepared to do in my case. It is unfortunate that one has to get "down and dirty" to make someone else do the right thing, however sometimes its the only expeditious remedy.

I hope this helps.

Paul

>

Hi Gord,

My mobile installations (we are talking about mag mounts typically in a mobile situation, are we not? Aside from the original question that is.) usually have at least 6 to 10 feet of coax running in very close proximity to the sheet metal of the chassis (certainly for the extent under the carpet for my rigs). Using RG-58, this presents a surface area of some 30 odd square inches located roughly .05 inch from the other plate presented by the sheet metal. By my rough calculations this presents about the same 300 pf as your offer of the mag mount.

If the mag mount's 300 pf is a dead short, then this must be in parallel with an already established dead short from the coax feeding it. The mag mount thus appears to be redundant and not a very notable distinction. Reductio ad absurdum would lead us to believe that aside from the grip of the magnet, there is no other benefit and if we could conspire to hold an antenna without it, it would be completely unnecessary. However, this is not my logic and experience indicates otherwise.

Again, to the general board: The logic of the arguments presented so far still far short of actually explaining the mechanics (much less the circuitry) and why the lack of benefit when compared to a direct connection. I still see discussion arranged around capacitors with dissipation factor unknown and dismissed simply for that reason.

that is computer control only.

4752. UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-03 00:00:00 UTC
From: N6TGK <n6tgk@home.com>
Message-ID: <axwW5.33341$I5.557571@news1.rdc1.sdca.home.com>
Source record: 68027
Cross-posted to: rec.radio.cb,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to
why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate
was scuffed up like you wouldn't believe. The power plug on the back is broken and
pushes back into the radio whenever you try to connect the power cord, the accessory
plug has epoxy all over it and someone added a speaker jack and did a very poor job
of it. Upon removing the covers I found that the back part of the display was melted
because some MORON removed the original lamp (probably burned out) and replaced
it with a HIGHER wattage lamp. This lamp melted the display to the point that the
lamp will no longer stay in place. Wires have been snipped and slodered to other
locations, obviously an attempt at doing some kind of modifications. There are cold
solder joints, large globs of solder and someone added a small PCB board to the underside
of the RF board and is being held in place by pieces of solder. I have no idea
what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

Hi Jim,

The portion of the message you did not quote consists of:
> I still see discussion arranged around capacitors with
>dissipation factor unknown and dismissed simply for that reason.
As Air is NOT the di-electric in this capacitor, there must be some value other than 1.00. It also follows that there is a corresponding dissipation factor which still remains unstated - in rhyme or free verse.

In other unquoted material:
>Anyone know the dielectric constant of this magnet? Or, more
>importantly, its dissipation factor at resonance? Given that nearly
>every mag mount that I have observed appears to have the common
>ferrous magnetic material bound in a vinyl disk, it would do well to
>remember not all ferrites are benign substances transparent to the
>passage of RF.
I posited that this medium consisted of a magnetic material in a vinyl binder, others have posted that there was simply a vinyl protector. On a casual inspection of one of my own I found a foam plastic.

If that magnet is not one in a vinyl binder, but is rather the more ordinary ceramic permanent magnet, then the material of that ceramic, the ferrite could easily be VERY lossy if found between the plates of a capacitor.

Given there is a disconnect between the claims of adequacy on the part of mag mounts and the counter claims of improved performance by simple ohmic connection to the same sheet metal, it becomes apparent that the short fall of performance must be found in the difference of the two

methods of "coupling" to the sheet metal.

The argument of "capacitance" is not an answer for the difference, unless some loss is involved. The simplest source of loss in this regard would be dissipation of the dielectric. Whatever media that is used is suspect barring other discussion.

For sale Icom R71A. This is an older unit that has been in the box
for about 15 years. It
is in NEW condition, has notch and passband tuning and an Icom 2.4
kHz SSB filter (the original filter comes with it).
Also included is the Icom SP3 speaker, HP1 headphones and user
manual/schematics.
All the above in original boxes.
I took the unit out of the box and it checks out fine. ROM is OK.

Buyer pays shipping, US only.
I am a Certified PayPal user, prefer PayPal payment. Will take any
check but ALL checks
must clear before I ship. ALL checks includes money orders,
cashier's checks, certified
checks , personal checks and even Postal Money Orders. ALL CHECKS
MUST CLEAR,
NO EXCEPTIONS.

First $425.00 takes it.

Clint,

Thanks for your reply.

Tried a different mic/headset combo today and it fixed the deviation problem
(clipping) without needing changes to the preset.

Unfortunately I can't recall who I bought the radio from or the importer as
it was at a local Hamfest around three years ago here in England!

Regards,
Neil.

That could be Richard, I have used magmounts for many years but never have tried comparing them with a direct connection.

>The following is a general response to those various posters that
>responded to my queries.
>
>And still no one can respond to the discussion of currents and return,
>or where this capacitance falls in the circuit.

OK...the capacitance merely connects the braid of the feedline to the counterpoise, quite simple actually, I'd think that there'd be little difference between a magmount sitting on top of a car and a vertical antenna with four radials each fed with a capacitor of say 200 pf.

Hey, there'd be very little difference (at VHF) between a direct mechanical connection and a 300pf or so capacitor. ~300 pf is for sure a dead short at VHF.

> A capacitor with one
>lead open does not exhibit very much capacitance except through a
>third body (which also remains un discussed).

Open?...it's not open Richard, the braid is connected THROUGH the capacitance to the counterpoise. Very little difference than connecting it directly. imo.

> At best, the sheet
>metal presents an intermediate plate, and by common experience this
>appears to be a poor solution ranking down there with the radiating

Speaking of age, I bought my first TNC many years ago, it was a PK-232 and it's serial number was 00094. The 'release date' of the software was 'after' I bought it (by a month or so!). I'm betting that it was the first (or nearly the first) one in Canada. Anyone got a new one?...what's the serial?... :)

Hi, I hope somebody can help me out here :-)

I'm looking for an IC named, TH9004AP, located in the audio/squelch circuit
in a IC-20X.
Does anybody know where I can get it or a suitable replacement ?
First I thought it was a Toshiba component, but I can't find it anywhere.
Maxim has something named MAX9004, -is this an equivalent ?

Thank a lot :)

You are looking for the DG-5 counter/readout. You could probably make
the cable. I sold a 520 a while back, and the next owner used it mobile
a bit, and made a cord for it. I don't think there was too much to it.

Need cash for the holidays? I might be able to help.

I am looking for any old electronic musical equipment, BROKEN is OK.

Synthesizers
effects processors (tape echos, flangers, modulators, filters, etc)
drum machines
keyboards
vocoders
sequencers
and old patchable modular or analog synth (parts ok too)

Will consider anything, especially older stuff with lots of knobs and dials.
Moog, ARP, Sequential Circuits, Roland, Oberheim, Korg, etc!

Please email me privately with price and condition as well as location.
Thanks in advance.

here are just a few examples of things i am looking for:
Elka Synthex
Korg Stage Echo SE-500
Synton Syrinx, red blue black or any color
Sequential Circuits Inc Prophet 5
Wurlitzer 200 series electronic piano
etc!

> ...if you use the apostrophe you're indicating that something (which
> you haven't named) belongs to the '73'.

This is a common myth. The apostrophe indicates more than possessive case.
From Webster's: "apostrophe - a mark ' used to indicate the omission of
letters or figures, the possessive case, OR THE PLURAL OF LETTERS OR
FIGURES." (emphasis mine) "Figures" in this case means numbers.

So if someone wants to pluralize 73, it would be 73's.

I have an ADI HT600HP dualband h/t for sale. Comes with standard charger, one battery, dry cell case for alkalines, standard antenna. I also bought a longer ant that extends for greater performance when you're not near the repeaters. It goes from 4" down to 12" fully extended. Sure helps on simplex and those far away repeaters.

Condition is about a 9+ out of a 10 scale.

Price: $250 obo shipped COD or Prepay from Las Vegas, Nv

Source record: 67957

Greetings!

I am upgrading to an SB-220 and am offering up my ol' SB-201 for sale or trade. Amp needs work. It was working fine and putting out 650 watts when something 'popped' last week towards the bottom of the amp and she stopped working. Still showing 2,100 on the HV meter, and I think the tubes are still good. I truly believe it is a simple problem for someone more adept than me. I haven't even taken the cover off and looked. I would prefer a local pickup or will deliver within a reasonable distance for a decent offer. Would take older HF gear in trade or sell for ??? This one has been modified for 10 meter operation. E-mail me with any offers, whether trade or cash.

Of course, but if you plan to operate at 160M using a magmount then you got one helluva lot more problems than worrying about coupling to the counterpoise!!...like maybe getting clearance from the FAA/IC for the Airways Clearances you'll need!. :)

>is.) usually have at least 6 to 10 feet of coax running in very close
>proximity to the sheet metal of the chassis (certainly for the extent
>under the carpet for my rigs). Using RG-58, this presents a surface
>area of some 30 odd square inches located roughly .05 inch from the
>other plate presented by the sheet metal. By my rough calculations
>this presents about the same 300 pf as your offer of the mag mount.
>

As I see it, after the coax enters the vehicle then it's no longer coupling to the counterpoise, therefore there's only a couple of feet that's lying on the counterpoise and is capable of doing any coupling at all. I'd judge that if you didn't have the RF coupling as close as you do (by the magnet) then you'd have some swr introduced because you don't have the coupling close enough to the base of your radiator, also the coupling will be unstable because of wind movement of the coax on the car roof.

>If the mag mount's 300 pf is a dead short, then this must be in
>parallel with an already established dead short from the coax feeding
>it.

But imo the couple of feet of RG-58 lying loosely on the roof is, although in parallel with the magnet's capacitance, much much less that it's capacitance so for all practical purposes won't matter.

>The mag mount thus appears to be redundant and not a very notable
>distinction. Reductio ad absurdum would lead us to believe that aside
>from the grip of the magnet, there is no other benefit and if we could
>conspire to hold an antenna without it, it would be completely
>unnecessary.

I don't agree at all...

>However, this is not my logic and experience indicates
>otherwise.
>

Mine doesn't...

>Again, to the general board: The logic of the arguments presented so
>far still far short of actually explaining the mechanics (much less
>the circuitry) and why the lack of benefit when compared to a direct
>connection.

Cripes, there's almost no mechanics involved here at all...gee... The magnet merely holds the bloody antenna on the roof and acts as a capacitive coupling to the counterpoise. How could it be simpler?. The 'benefit' is (clearly) no requirement for drilling holes in your new shiny car, as well as avoidance of pissing the little woman off.

>I still see discussion arranged around capacitors with
>dissipation factor unknown and dismissed simply for that reason.
>

Say what?...

Who cares what the 'dissipation factors' are?...this is an overkill DEAD SHORT so who cares what the dissipation is?...I seriously doubt that you'll heat up that great hunk of iron stuck onto your metal roof.

>73's
>Richard Clark, KB7QHC

Richard, 73 means 'best regards', when you say '73s' you're saying 'best regardses'...if you use the apostrophe you're indicating that something (which you haven't named) belongs to the '73'. If you don't believe me then check with an English teacher. Experienced hams don't use _73s_ much less _73's_ :)

4811. Help with Icom IC735

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-04 05:17:48 UTC
From: Raul Barboni <rbarboni@chasque.apc.org>
Message-ID: <3A2B28FC.25A2051A@chasque.apc.org>
Source record: 67965

When push the PTT and speak loud in the microphone, the CPU of the IC735

frezees up, the display indicates TX but the output power is 0.
Changing the CPU remains the same.
Anybody can help me?
Thanking in advance,
Raul

Hi all.

I'm looking for a couple of noise blankers, one for my Drake TR-5, one
for a TR-7/7A. The applicable Drake model numbers are NB-5 and NB-7
(or NB-7A) respectively.

Please contact me at:

NeilR@innermedia.com

or call (800) 962-2949 (in the USA)
or (603) 465-2788

Must be operational.

Thanks, and any/all leads are gratefully received.

Neil, K1VY
New Hampshire

4817. HTX-10 Help Please

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-05 00:00:00 UTC
From: "John H. Klewer" <klewerjh@boeing.com>
Message-ID: <3A2CF9A9.7B1A86D6@boeing.com>
Source record: 67905

Anyone tell me which pot will adjust the TX power?

A friend wants to drive a 10 meter amplifier (originally designed for that other nearby band) and needs the TX power set to about 5 watts.

I would like to avoid circuit changes if there is an adjustment available.

Reply to:

n6ax@pacbell.net

Thanks

John, N6AX

W4MPY and Little Print Shop are both as
reliable and solid as you can get.
They also have the same cookie cutter cards that have been around since the
'60s
Take a look at some of these 'slick' QSL card
companys.....

What kind of RS-232 cable do I need to communicate between my TM-D700A and the program MCP-D700 on my computer. The only reference in the program docs is a non-modem cable. I have tried a straight through cable and a null modem cable to no avail. I know my COM port is working since I use it to communicate to my digital camera. Any help would be appreciated!

Well Cecil, why would anyone 'want' to pluralize the phrase 'Best
regards'?...who would say 'Best regardses'?...because that's what 73s means
right?...the proper method is 73, and as Jim Weir notes 73 is for use in Morse
anyway, or at least that's been the case for the past 38 years that I've been
involved. YMMV.

>73, Bill W7TI

Umm, thanks for the advice which I'll respectfully decline at the moment.

Seeing as we're not using Morse I'll pass on my 'best regards' (vice 73), which are more directed toward your hobby rather than your manners, evidence of the quality of which are shown by your last sentence.

I didn't say anything about pluralizing "Best Regards". 73's is the
proper way to pluralize the number 73. But perhaps 73's simply means
"Loads and Loads of Best Regards". So Sleighloads of Best Wishes for
the Holiday Season.

That board is supposed to be there and these radios really don't hold up very well to any kind of abuse. Always check to see if a person sells a lot of items and check to see if they exist on ebay for references and positive feedback. Do a search on dejanews to see if the person had good or bad dealings in the past.

"N6TGK" <n6tgk@home.com> wrote in message news:axwW5.33341$I5.557571@news1.rdc1.sdca.home.com...
I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to
why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate
was scuffed up like you wouldn't believe. The power plug on the back is broken and
pushes back into the radio whenever you try to connect the power cord, the accessory
plug has epoxy all over it and someone added a speaker jack and did a very poor job
of it. Upon removing the covers I found that the back part of the display was melted
because some MORON removed the original lamp (probably burned out) and replaced
it with a HIGHER wattage lamp. This lamp melted the display to the point that the
lamp will no longer stay in place. Wires have been snipped and slodered to other
locations, obviously an attempt at doing some kind of modifications. There are cold
solder joints, large globs of solder and someone added a small PCB board to the underside
of the RF board and is being held in place by pieces of solder. I have no

idea
what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

Source record: 67898

Hi Guys;
This Drake TR-7 transceiver is got to be one of the best rigs ever made here in the USA. Please be advised that this is for TR-7 ONLY, the supply has been sold. It covers from 160 to 10 meters, although the warc bands have not been activated yet, the S/N is 2190. Maybe this means that it has'nt been "fiddled" with yet? It also has general coverage receive from 1.5 to 30 mhz. It comes with the original manual and I have tested it and it seems fine with full output! Works on USB, LSB, CW, AM, RTTY modes. Here is a list of the Options:
300 hz CW Filter #5.645-300/8.
500 hz CW Filter #5.645-500/8.
6 KHZ AM filter #5.645-6khz/8.
All by Network Sceinces Inc.
AUX-7 Board.
It is in Excellent condition except for the early "Gummy" type of cover that Drake supplied.
I have heard other TR-7's operate on AM and I must say, they have the best AM of any Solid State rig that i've ever heard.
Price $450 plus UPS!
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

Bill,
It would be best if turned the radio off and the pwr supply. There is a slight overvoltage on some pwr supplies as you turn them on this can blow light bulbs and small parts in a rig if it is left on.

4863. F.S. VERY HEAVY DUTY 4-Element 10 Meter Beam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-06 00:00:00 UTC
From: "Jay C. Greenberg" <wa4vrv@srv.net>
Message-ID: <51gs2t4tp2pfj13a9qdauuocu7519s487o@4ax.com>
Source record: 67937

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Open the radio back up and look for the plug that fell off when you had
it opened up the first time. Replace the plug, restart the radio micro
processor and get on with the show.

cheers
skipp

FS: I have a DD-1 digital display for the Yaesu FT-101 series tranceivers. I have never had this display on to verify its operation as I don't own any Yaesu equipment. All I know is that a digit lights when turned on with nothing hooked up to it and for this reason I am selling it, with manual (I have a digital picture I can send) for $40 as-is. Mike, (979) 693-1461 eves and weekends or e-mail to: gspubl@tca.net

From: Bill Clarke <billclarke@bigfoot.com>
Message-ID: <90ltvb$96g$1@newsfeed.logical.net>
Source record: 67944

I want to make my own microphone inserts for use in the shack (to be placed inside D104 for looks).

As I don't want to reinvent the wheel, I am looking for diagrams of successful microphones using either the Radio Shack cartridge or a Panasonic cartridge. Old articles, clippings, whatever info you might have. Would really appreciate information regarding tone control circuits using these elements.

Thanks,

Bill W2BLC w2blc@bigfoot.com

I have a Yaesu Ft101ex with speech processor, AM filter, xtals for 160 thru
10 -- plus 17 meters (I used 10C for the custom 17 meter xtals) !!!!!!
Also have the SPECTRONICS DIGITAL READOUT and the FTV650B 6 meter
transverter with a 2201 (6146B) final . Copies of all manuals AND the FT101
FACTORY SERVICE MANUAL. Some FOX TANGO articles. No manual for the readout
(IT works great -- I
like it better than the FC601 - it has the built in sideband offset) I do
not wish to break the rig it up !!! Everything is in very good condition
and
EVERYTHING works fine. The leather handle on the 101 is dry
and the cord on the readout has a piece of tape on it.
Asking $ 430.00 for everything --- buyer pays shipping.

Get it before it goes on EBAY !!

Pics available -- about 1 megs worth. !!

Russ

4873. Wanted: Manual for an Azden PCS-6000H

4883. WTB: Ranger AR 3500 100 watt

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-07 00:00:00 UTC
From: hudsonvalleycomm@aol.com
Message-ID: <20001207083600.21453.00002160@ng-fl1.aol.com>
Source record: 67818

Hello. I am looking for a reasonably priced 100 watt Ranger AR 3500, with the black face. I prefer the radio to be stock with no mods, however I will take one with ONLY frequency mods done, for they can be taken back out. Please, no screwdriver jockey radios. I had one of these when I was young and first became a ham, thought it would be neat to own another one. I can pay cash, or I have commercial gear for trade, if interested. Please respond via E-mail, with condition and price. Thank you in advance!
Glenn- KB2GQZ

4884. Swan 100mxa SS HF rig- clean

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-07 00:00:00 UTC
From: GB <picture@gvtel.com>
Message-ID: <3A2F9B8C.7BB08691@gvtel.com>
Source record: 67819

I have a Swan 100mxa solid state HF rig for sale. It covers 80, 40, 20, 15, and 500 Hz segments of 10 meters which is changeable by replacing a crystal. It is currently setup for 28-28.500. This has been my back up rig for several years and has seen very little use. It has one problem- only about 10 watts out on 15 meters. It shows 130 watts on 80 and 100 watts or better on the other bands. Included is the original manual with extensive individual schematics of all the major boards, plus a general schematic. This is a very nice radio and works very well. It is an easy rig to work on if you are the tech type. Asking $325 shipped. An amplified D104 is available for an additional $30.00. Picture available. e-mail please.

>
Nicholas, not being familiar with your rig I'll not comment on most of your observations but it seems to me that you may have a basic fundamental of SSB unclear in your head here. When you transmit a steady carrier (as in FM for instance) then the rig will put out it's rated power of 100W. But when you use SSB (voice) the rig will put out 100W on peaks ONLY. That's why they call it 'PEP', peak envelope power, in other words, only the peaks of your voice will equal 100 watts.

When an analogue meter is used the peaks won't be indicated but an average will. This average should be about 2/3 of the peak. Try speaking at a constant level and adjust the mic gain till the ALC is indicating properly then switch to IC and you'll see that the average will likely be about two thirds of full output.

BTW, I just tried to see what you meant about the ALC appearing to increase as you reduced power, and my rig does that too!...I just never noticed it and I think I see what's going on...it's likely the 'audio power' is constant (at a particular mic/compression setting) and as you reduce RF power then there is too much audio and the ALC is trying to tell you that so that You'll reduce it to be the right amount for the amount of RF. (that's likely not too well described but you'll get the picture I think). My rig is a FT-990 and has an RF power control on the front panel, you can set the power anywhere between 10 watts and about 110 watts.

Hope this helps...
Cheers.

4903. Remote Control of VC-H1?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-07 02:44:52 UTC
From: abcdef123@my-deja.com
Message-ID: <90mtj3$e8l$1@nnrp1.deja.com>
Source record: 67811
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur,rec.radio.amateur.digital.misc

Hi,

Has anyone successfully communicated with their VC-H1 via the
COM port on it? According to the manual (p 17-18), it is
possible to connect a computer to it via the serial port and
then remote control becomes possible. Kenwood provides pinouts
for the COM port in a file called connectors.pdf that is available
for download at www.kenwood.net.

Using the Kenwood document, I constructed a cable to connect my
VC-H1 to my computer. I set the communications parameters as
specified on p. 17 of the user manual (9600,8,1,no parity).
Other than turning on the LCD screen on the VC-H1, I am not
able to get any response from the camera when sending any of
the commands listed on p. 18 of the manual to the camera from a
terminal emulator. I've tried uppercase and lowercase and varying
the communications parameters, but to no avail.

I've also talked to Kenwood support in California and they don't
seem to have a clue. Their support person still hasn't called me
back as promised after 48 hours have gone by. Unfortunately, I
don't speak Japanese or I'd call the company in Japan and cut the
fools in California out of the loop.

OK, here it goes, I'm about to reveal my ignorance :-).

The IC-735 is the only HF rig I've used so far, given that I've been licensed for just one year now. What I'm hoping to find out is:

How useful is the ALC section of the meter for indicating relatively full modulation of the signal in SSB? The ALC deflection increases as power levels are dropped. Dropping the mic gain so that the ALC needle moves within the accepted range just results in the signal almost disappearing.

The implication is that the ALC needle will only be indicative of near full signal modulation at one power setting. This setting appears to be somewhere up near 150W! I know, I've tried. I still get ALC deflections at this power level that go up to the maximum recommended (half-scale deflections) to get full power out: in other words, the ALC now seems to work as suggested in the manual. The monitored signal sounds clean, though I don't know what it would look like on a scope or using a spectrum analyzer. I've checked the power output on three different power meters, so there shouldn't be too much error there.

Not wanting a melt-down, I turned the power inside the radio back down so that I have a max. of 100W, as specified. To get anywhere near that with a constant tone or voice, the ALC deflection has to be driven up to 3/4 scale. However this may not be an issue since at this power setting the ALC meter may not accurately reflect the level of modulation.

Can someone please shed some light on my above observations? Tell me whether I've lost the plot or got it right?

Many thanks!

Not sure about Rochester, but there's one in Tonawanda,
(about 60 miles east of Rochester, a few miles north
of Buffalo). Ray KF2WG is the owner.

Greetings,

I've been away from the hobby for over 20 years so I'm not exactly up to speed as to the particulars of equipment manufactured since 1980 or so. I've been looking for a good, modestly priced, used HF rig and my past experience (Century 21) with Ten Tec has been good and since they will still support their older rigs I'm leaning towards aquiring a Ten Tec rig. Perusing the various online ham gear classifieds, I've seen ads (a few) for the Ten Tec Delta. I know some Ten Tec gear has great reputations and some less so. What is the rep of the Delta? Your thoughts, pro or con , will be greatly appreciated. Thanks.

Regards,

Rich A. / KB2CPE

I have an ADI HT600HP dualband h/t for sale. Comes with standard charger, one battery, dry cell case for alkalines, standard antenna. I also bought a longer ant that extends for greater performance when you're not near the repeaters. It goes from 4" down to 12" fully extended. Sure helps on simplex and those far away repeaters.

Condition is about a 9+ out of a 10 scale.

Price: $250 obo shipped COD or Prepay from Las Vegas, Nv

Guys I have several items for sale due to the pending arrival of my new son, ETA February 22:

Omni 6 with option 1 upgrade, #700 hand mic., #961 PS/SPKR, #301 Remote Knob, TCXO. 1.8 SSB Filters; Aligned by TenTec 11/28/2000 at a cost of $240. Will inc. that documentation. ALL LIKE NEW $1,900 firm.

Transoceanic Model L-600, very nice receiver with some new tubes, very clean, very collectible, $200.

Browning Golden Eagle MKIII, very good shape cosmetically. Receiver works well, Transmitter lights up but doesn't transmit. Haven't looked into it (?) $200

Like New Kenwood TS-520S Super shape and Electrically perfect, $300

Eico Model 460 O'scope. Looks nice and works well, circa 1950's, $65

MFJ 40 Meter CW Station model 9040 with matching tuner and power pack for batteries. Cost over 250. new, will take $100

I have pics of all this stuff for serious buyers. Please reply off the list.

Thanks, K3VR, Brian

That doesn't sound right. The 735 is rated at 100 watts output on SSB,
CW and FM; 40 watts on AM. Those are the measurements the ARRL lab had
on the radio, when they first reviewed it, many years ago.

Has your radio been modified by some previous owner? What are you
using to measure your output?

Has anyone bought one of those power stations ie. gel cells from the Ham
Contact Joe N6YYO
in California and had trouble with it, like it only putting out 11.6
volts. I bought one new from him,
then took it on vacation 3 months later to find out it only put out 11.6
volts and wouldn't run my HF radio. Now he says the warranty is expired
and it will cost me $30 plus $9 shipping and handling to repair it.
Thats the price I paid for the Power Station 2 7Amp supply. To me that
would be paying for it twice, I never used it because it only charged
to 11.6 volts. Please E-mail me if you had any similar trouble with the
HAM contact. It's not a a matter of money but I want to see if its
just me or he is treating everyone else like this and I also want to
make the amateur community aware of his policy. His Website says
below, which IMHO is not true at all.

1) Quality Products At Competitive Pricing, 2) Excellent Service 3) A

It worked just fine for me,-- printed on 8.5x11 paper with an old HP
DeskJet 855C. The font is pretty small, especially on the first
page. You cannot reformat it unless you have the full Adobe Acrobat
program, not just the reader.

I have a nice Yaesu FT- 530 duelband ht for sale. Don't really want to
e-bay it.
This radio is in very good condition and includes the following:

Radio
Duck
2 wall wort chargers
2 1000 MA batteries
FNB-12 AA battery case
Cigarette lighter filtered power source & charger
MH-29 Display mic (controls radio and had freq. readout on mic.)
3 Yaesu soft cases (1 still in plastic)CSC-56-CSC-58
2 are for small battery and 1 is for the large battery (All these cases are
new and you cannot buy them any more)
Box

This radio has been modified for 800 mhtz. recieve ect.
There are two things that I need to mention;
I cannot locate manual but you can get one from yeasu for under $10.
I lost a couple of the small screws on the the bottom of radio between the
radio and battery but they are available also.
$220 plus a few for shipping

If interested, you can reply to:
gbaker@pacifier.com
I have feedback on e-bay if you want to look @ (gbaker)

Source record: 67857

Steve, we have two TM-241As in the family and they both developed the problem. This appears to be a chronic problem with these units. The Kenwood Service Manager explained to me that there's a multipin plug and socket for the digital read-out that gets dirty. Apparently, if you clean these mating parts, the problem is corrected. I was able to get Kenwood Service to do this for me at no charge several years ago. I made the argument that since so many owners have experienced the problem, there must be a fundamental design flaw. Interestingly, one of our units continues to work well, but the other has again developed the problem.

Hi and thanks for reading this posting. Get a great Christmas present for yourself! I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Yes, it is an 11x17 layout, but try printing it out anyway. If you've
clicked the "print to fit page" in the printer dialogue box, it will
print out on 8.5x11" paper, as it just did on my printer. Only
limitation is whether you have enough memory in your printer to handle
all the data on each page.

Print it out and see what you get -- you might even ignore the 1st
page -- it's the second page that has the band plan on it.

Congratulations you have managed to thoroughly misalign the radio. Please
obtain a service manual and the proper test equipment and do it right. Your
spurious signals are going to be fairly high.

I have three Motorola HT600 438-470mHz, 6 channel radios forsale. The radios
are cosmetically rough, but are in perfect working order. Radios only.

Asking $225 for all three.

Dan

The mod to re-program the the radios BIOS eprom does work.
It is available on www.mods.dk and it does work. I have used it
on my 920 about 1 1/2 years ago. Be extremely careful, as
you only get one shot at it!

Hi:

I have just received a NTN4796A which is a 6 unit Saber / Astro
Rapid Charger. Has the Original instructions, Power Cord.

Brand New !! Never placed in service

Mototrola's price is $788.00 and even wholesale they are
over 500.00

$245.00+$10.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

>
> Has your radio been modified by some previous owner? What are you
> using to measure your output?

Hi Bob,

It was me who modified the radio to find out how things work and most settings are back to spec. Nearly all tests were into dummyloads. Nothing was changed that couldn't be put back the way they it was. I am using the service manual, so know exactly where to set things to keep them up to spec. The only thing that I permanently changed by ear was the bfo setting - this was quite obviously way out of its passband on USB and HAD to be adjusted. Monitoring and on air tests here reveal that the signal sounds good and natural, LSB and USB sound the same too, so they are not out relative to each other.

I'm using the meter in an MFJ949D ATU as the power meter - this has peak and average settings. This has been checked against other meters.

I should say that I've adjusted the APC and power setting as per spec ie. for 100W. Using a 1 kHz test tone I now after all get the same power out (100W) on FM as I do on SSB. What threw me was that when using voice, or lower tones (eg. 400 Hz) the power out would drop maybe 3dB for the same ALC deflections/mic gain settings. But then perhaps the radio is most sensitive to tones in the middle of the passband? Talking like Mickey Mouse I have no problems hitting peaks of 100W :-).

Regarding my earlier observations on ALC, power settings and power out, I've noted that with this radio the mic gain should be set for optimal ALC activation with the front panel RF power slider set to maximum (ie 100W). The mic gain should then be left there rather than be re-adjusted when dropping the RF power on the slider control. In other words, *ignore* the increased ALC deflections at lower power settings. 1 kHz tones in SSB produce the same power out as in FM mode for all power settings when done this way.

Cheers,
Nicholas - VK5CX

Source record: 67885

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. With the addition of
aux crystals, it will go on the WARC bands.

Requires a 35 amp 12 volts supply since maximum key down current is 32
amps. A supply is not included. It comes with a W7FG manual copy.
$275 plus shipping.

73,
Doug/WA1TUT

Just a comment, RS just closed this radio out at 99.00 new when they
introduced the "new and improved" (less power) model in the new catalog.

Happy shopping!,

Another fix is to check and make sure all the screws are tight on the display board, espesicialy if the radio is being used mobile alot. That has fixed mine twice now (in the 7 6 years I have had it).

This model has been in production since 1986 and is still sold by Yaesu.

Here are the AES prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V) battery.

Price: $135 PLUS shipping costs from 29609 to
your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $10 plus postage for the pair.

Knight Model KG-687 Sweep / Marker Generator, very good
condition but missing the handle on the top. Still has the plastic
over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's
manual, power cable and "six" brand new ribbons. This takes the
small ribbons like the Okidata type printers.
$25 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual,
power cable and 2 new ribbons.
$20 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew
and has plastic spacers installed. Bare copper wire. You need to see
the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N&#65533;SAH

4992. Paccomm pico packet

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 06:41:44 UTC
From: Joe Rentfrow <joe72@mindspring.com>
Message-ID: <90v8st$46c$1@nntp9.atl.mindspring.net>
Source record: 67770

I just purchased a new pico packet and have a problem with it. When powered up it emits a harmonic so bad that it interferes with the radio's receiver to the point it doesn't rx any packet information. I've tried it with 5 different radios and they're all the same. I know the unit is new and possibly defective. My question is anybody else using this model and having success with it and does anybody know what could be the problem.

Start by eliminating any cables that can be, such as a printer cable if not in use.

Any cables that are remaining should be shielded types. Many are not.

Adding some toroid "sleeves" over the cable as close to the computer as possible will help as well.

Try unplugging the monitor to see if that's the main source. If it is, and the toroids and/or extra shielding don't do it, you can try some spray shielding on the inside of the monitor case. But it's a big job that must be done carefully. And then the pieces must be bonded together with some short pieces of wire to make sure the shielded case is all tied together electricallly.

Does anyone know of a source for an ua757 I.F. amp integrated
circuit? The usual sources such as SKG and NTE don't list it.
I think the original maker was Fairchild.

I need if for a driver board in my Swan/Cubic Astro-102BX.

73,
Doug/WA1TUT

5000. HTX-242 - won't drop carrier?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 12:29:15 UTC
From: cgibbs@gcfn.org
Message-ID: <90vsurinf1@acme.gcfn.org>
Source record: 67778

Any ideas -- recently, my HTX-242 started to not dropping the carrier when I release the PTT. Is there something I should check or reset or will I need to take it in for repair? Have had the radio less than a month and was working fine until yesterday.

Thanks,
Carl -- KC8KQL

Have for sale a Pyramid Model PS-36K power supply in very good condition surplus to my needs . Works fine.

Pic available via: http://pages.prodigy.net/alexjent/PS-36K.jpg

Note: There is a scratch on the voltage meter face. The picture shows it much worse than it actually is due to shadow from flash.

$115 shipped to you via UPS ground.

Carl:

Just curious, was this the radio you got for "$99."?

Sometimes the closeout items at RS are the last ones left in the store, in other words, stuff that people have returned because of a certain problem, nag or dislike with that particular item (been there done that myself).

By the way my works like a charm.

It is a rp 50
i do not think there was many made maybe you could tell me about the sp 50
it might be a similar unit.
This is a hand held with 2 knobs on the top one for channel the other for
on.off volume on the front there is a key pad to enter frequencies with 4
extra buttons above the key pad and 4 more on the right of the key pad.
thanks
Peter

5020. RF ground/lighning ground

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 18:46:24 UTC
From: David <k4zzrNONSPAM@gate.net>
Message-ID: <910j0c$1hma$1@news.gate.net>
Source record: 67698

Ok guys, I need some advice (please)....regarding my station grounds.

Here's my setup right now: The base of my tower is located directly outside my station (within three feet). I've got eight 8' ground rods extending out into the yard from the legs of the tower using #2 bare copper wire. I have a large copper bulkhead attached to the side of the house (also just outside the shack) where each coax cable and rotor cable attaches to I.C.E. lightning protection devices and then the cables run into the shack. The bulkhead (with big insulators on the wall) is about a foot above the ground. There's also a 2' piece of copper strap used to bond the tower base with the "single point" bulkhead. And, there are three additional rods connected to the bulkhead spreading out 12' in each direction underneath it. All of this is for a bit of lightning protection here in south Florida.

From the back of my desk all of my station equipment is attached to a 1 1/2" copper strap running directly outside to the same bulkhead for my "RF ground" connection.

Is this the correct way to attach my RF ground? Should I be running directly to that bulkhead or run it to a couple of independent ground rods? If I should be running it to separate ground rods, they would have to be located within a foot or less of the existing "lightning" rods because of the proximity of the tower. So the question is, do I leave the RF ground strap connected to the bulkhead or run it straight into the ground with a couple of rods not directly connected to the bulkhead? I want the best RF ground connection I can get.

Thanks,
David, K4ZZR

5023. Converting TenTec 9420 P.S. to 120 VAC?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 20:02:44 UTC
From: Joe Dubner <NO_SPAM.jdubner@yahoo.com>
Message-ID: <3A33E164.59BE0A85@yahoo.com>
Source record: 67701

Regarding the TenTec Model 9420 Power Supply (14V/100A), how does one configure it to run on 120 VAC, assuming it's currently configured for 240 VAC? Other than changing the fuses and line power connector, I could find nothing when I removed the top cover. Are there some jumpers hidden away somewhere? Alas, I don't have a schematic or manual, although I'm planning to write TenTec for one.

Incidentally, I have just experienced TenTec's legendary customer service. I acquired a TenTec Hercules II amplifier and although I'm not the original owner I telephoned TenTec to inquire about a manual. A tech there named John said he'd take care of it (no charge) and it arrived a few days later. I am flabbergasted! TenTec is at the top of my short list of great companies to deal with and I highly recommend them.

5024. Ten-Tec Newbie Help needed Argosy Shopping

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 20:35:13 UTC
From: TR <w7trx@my-deja.com>
Message-ID: <910pe1rre1@nnrp1.deja.com>
Source record: 67703

Greetings,

After receiving positive input regarding the Ten-Tec Argosy II as a portable radio, I'm considering doing a little shopping. I need some additional information so I can make an educated decision regarding, condition, options, accessories and price. I would really like to get one with all the helpful options together, than begin an endless hunt for parts. I plan on exclusive SSB use on battery power.

I am grateful for the earlier input I received and appreciate any answers that can be provided. Happy Holidays {:-)

73, Tracy
W7TRX

****
In the ARRL book "Low Power Communication", it discusses the Argosy II. It makes mention of 4 revisions of the internal circuitry. What are these revisions? Are any of these to be avoided or sought after? Can the revisions be determined by serial number?

There is a mention of some modifications that improve receiver performance, with no details. Any info on this?

Any other modifications that should be looked for or avoided?

It recommends the active audio filter option. Any comments?

It discusses a choice of several IF crystal filters with no details. Any info on this?

It discusses the worthwhile addition of a T-kit speech processor for SSB. I plan to use exclusively SSB. Any input on this option?

I have seen some sold with a crystal calibrator. What is this? Is this a necessary option?

Any other helpful information to assist with getting a good one?

With some assistance from helpful hams I have the following information. This can be commented on, or just left as helpful information for other Ten-Tec newbies.

The 8 pole SSB filter (model 220) is a worthwhile replacement for the stock 4-pole filter.

If you are going to use the Argosy on Battery power you must use the Ten-Tec model 1125 magnetic circuit breaker (available from Air Pax). Is a standard fused cable not appropriate?

5025. FS: Motorola GP-68 UHF 44-470Mhz Portable

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 20:41:26 UTC
From: Steve Damelio <smdamelio@earthlink.net>
Message-ID: <WTRY5.9769$U4.946719@newsread1.prod.itd.earthlink.net>
Source record: 67702

For sale:

1 Motorola GP-68 UHF portable radio. The radio
is completely front face programmable, including frequency, offset,
tone (PL or DPL), hi/lo power (1/5 watts) . There are 20 programmable
channels
or you can operate in VFO mode and just plug a frequency in
on the fly. (the radio has a full DTMF pad)

This radio
also includes a new Motorola speaker mic, high cap NiCD battery, and a
6 AA battery holder. Also included is the drop in charger (which
will charge either the NiCD pack or the AA pack, even using NiMH
batteries!). Full manual included along with full programming
instructions.

The radio was purchased brand new and has little use on it. It is
a 9 out of 10. I have too many portables right now (and I just ordered
another) so this one has to go. $250 + $7.50 shipping for the
whole package. Guarenteed to work or send it back. The price
is FIRM (and is a bargain). First come, first serve. I ship USPS
priority insured.

I have a nice Yaesu FT- 530 duelband ht for sale. Don't really want to
e-bay it.
This radio is in very good condition and includes the following:

Radio
Duck
2 wall wort chargers
2 1000 MA batteries
FNB-12 AA battery case
Cigarette lighter filtered power source & charger
MH-29 Display mic (controls radio and had freq. readout on mic.)
3 Yaesu soft cases (1 still in plastic)CSC-56-CSC-58
2 are for small battery and 1 is for the large battery (All these cases are
new and you cannot buy them any more)
Box

This radio has been modified for 800 mhtz. recieve ect.
There are two things that I need to mention;
I cannot locate manual but you can get one from yeasu for under $10.
I lost a couple of the small screws on the the bottom of radio between the
radio and battery but they are available also.
$220 plus a few for shipping

If interested, you can reply to:
gbaker@pacifier.com
I have feedback on e-bay if you want to look @ (gbaker)

5029. Re: RF ground/lighning ground

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 21:58:40 UTC
From: Ron <NoSpam@nospam.com>
Message-ID: <k0TY5.348$W76.21917@typhoon.sonic.net>
Source record: 67707

David:

The notion of an RF ground is greatly overrated in most installations. Assuming that the ground is not an active part of the antenna system, as in the case of a ground mounted vertical, there really is no need for an extensive RF ground system. Even in the case of the vertical, the ground connection at the feed point of the antenna is the only part you would need to be concerned about.

Many problems that are traditionally blamed on poor RF grounding, such as TVI, RF feedback or getting RF burns from your microphone, are usually a result of some other problem that must be addressed. In most cases, it's a matter of poorly tuned antennas or ground loops. It sounds like you have done an exceptional job in designing your lightning ground, which is understandable considering your location.

The third grounding area to be concerned about is the "safety" ground from the house wiring. Have you grounded that to your entrance panel? During a lightning strike on your tower, energy from the tower could find its way to AC ground via your equipment. That's bad news if you're touching it! Likewise, a strike on a nearby power line could find your tower ground by the same route.

Good luck and 73!

5030. Pile of 50's QST Mags in LA, CA area - Cheap or free

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-10 22:04:10 UTC
From: Bruce Bergman <blCHURRObergman@earthlink.net>
Message-ID: <6sp73tgls2t41ih9p4bph8s747g3i5mlpl@4ax.com>
Source record: 67708

I found the box with a pile of old QST magazines, and I have no use for them. They'd be perfect for starting or adding to a radio club library, or for someone with lots of free time and server hard drive space to scan them and make them available on the Web as PDF files. (If the ARRL hasn't done it yet...) A few of them have gotten damp but most all are in good shape and readable, but certainly not 'museum quality'.

E-mail me with offers of a token purchase amount and to make arrangements to come and get 'em in Woodland Hills. If there are no bids, the free home with the best plans for them wins.

1950 - sep, oct
1951 - feb, dec
1952 - complete
1953 - all but apr, jun, sep, oct
1954 - all but mar, dec
1955 - all but jul
1956 - complete
1957 - all but jan
1958 - all but jun, sep - duplicates of aug, nov, dec
1959 - complete - duplicates of jan through oct
1960 - all but feb, jun, jul, aug
1961 - all but apr, oct
1962 - all but aug
1963 - only feb, mar, apr, jun, jul, aug

If this pile of magazines stays in storage here, they're only going to get wrecked or tossed. Many years ago, I got them with visions of using their plans to build my own 11 meter tube linear amplifier to go with my 11 meter tube transceiver, but thought better of it after further consideration. (And just had a tech crank the output on the transceiver finals up to the tube's full ratings, which was plenty for my needs.)

One of these days I have to get off my you-know-what and go get my Tech. Got a pile of Icom Commercial stuff (V-100 U-400, H-16, U-16) sitting around I can use...

Please don't make me Ebay!

For sale Icom R71A. This is an older unit that has been in the box
for about 15 years. It
is in NEW condition, has notch and passband tuning and an Icom 2.4
kHz SSB filter (the original filter comes with it).
Also included is the Icom SP3 speaker, HP1 headphones and user
manual/schematics, factory longwire antenna and spare fuses.
All the above in original boxes.
I took the unit out of the box and it checks out fine. ROM is OK.

I will double box (receiver only) and pay shipping and insurance
CONUS only. Speaker and 'phones in separate box, insured also.

I am a Certified PayPal user, prefer PayPal payment. Will take any
check but ALL checks
must clear before I ship. ALL checks includes money orders,
cashier's checks, certified
checks , personal checks and even Postal Money Orders. ALL CHECKS
MUST CLEAR,
NO EXCEPTIONS.

First $475.00 takes it.

Ron...thanks for the reply. The service entrance to the house is grounded and I understand what you mean about lightning strikes following paths. There's just no guarantee that lightning won't find its way to something I love (this includes my family). ;-) I've done about all I can do in the respect. At this point I'm just wanting to make sure the RF ground to the shack is up to par. So, do you think I should leave my station's copper strap attached to the bulkhead or run it to a couple of separate rods? Or does it even matter?

What kind of output filtering is used? How far down are harmonics?

it seems to me that these amps are for the cb market, since the drive to
full power is less than the fcc required 50 watts.

Those darn "grain-of-wheat" bulbs just don't last...
Try to procure some of the new bright white LEDs & see
if you can fabricate those into the display. They are
bright and last a long time...

5055. Re: RF ground/lighning ground

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-11 04:03:05 UTC
From: Ron <NoSpam@nospam.com>
Message-ID: <ZIYY5.375$W76.23693@typhoon.sonic.net>
Source record: 67733

David:

From an RF stand point it's best to have them all attached to one common point, since that will reduce the possibility of ground loops, and it establishes a "zero voltage point" for lightning protection. Keeping ground loops at bay is particularly important if you are connecting your radios to your computer sound card. I can't imagine that it would improve the strength of your signal in any measurable way to have a separate set of rods. The "standard operating procedure" is to use a "star-ground", where everything is referenced to one single, central point. A good reference on the net is the PolyPhaser web page http://www.polyphaser.com/ . I use their products on a commercial tower that I manage, and although there is practically no lightning here in the SF Bay Area, Polyphaser's techniques and products are considered the best you can get.

Ron...yes, I've read everything on the polyphaser web site and got much of my lightning info from them and also from the folks at Array Solutions. The copper strap I'm using is from polyphaser. Everything in my grounding system comes to the one single point bulkhead. I guess I'll continue using that for my station "rf" ground also.

Thanks again for the advice and 73,
David,K4ZZR

I have a ICOM 736 in good condition with hand mike that I would like to
sell.
It is 160 meters to 6 meters with Auto Tuner. Works great. $750.00 plus
the shipping charges.

5065. Re: RF ground/lighning ground

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-11 12:24:42 UTC
From: Jim <jspaz@i-55.com>
Message-ID: <3A34C78A.E3DA7@i-55.com>
Source record: 67743

Try to remember one point, keep all grounds at a site at the same potential. In other words, make sure they are all tied together. If you start having separate grounds, you run the risk of having current flow between them in a strike. The point is to have all equipment, tower, antenna cables and the like all tied to the same potential.

Another point to remember, is that you only get so much effective ground around a ground rod. By adding more ground rods in the same space, you are not lowering the effective resistance.

Each ground rod has a cone of influence around it. The area is about equal to the length of it. In other words, if you have an 8 foot ground rod, don't put another one within double it's length. Place 8 foot ground rods about 16 feet apart. This gives you the maximum effective ground between the rods. Much closer and you are wasting material. (ground rods and wire to connect them)

The best connection method is to use the exothermic weld method. Most people call it CAD WELD. This is a trade mark name from Enrico.

Hope this points you to understanding the many ways to do grounding. Each and every person you talk to will have a different way to do it. The whole point is to tie everything together with the lowest impedance possible.

Jim

Looking for a manual for a Heath SA-2060A antenna tuner.
A good photocopy would be fine. Yes, I'm aware of the
various manual vendors (W7FG, HI Manuals, Ray Sarrio,
and so on). I was hoping that one of my fellow hams
would be willing to share his manual, as I am always
willing to share my manuals.

Hi and thanks for reading this posting. Get a great Christmas present for yourself! I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Jim...thanks for the advice. My "shield" of 12 ground rods are each 12' apart and bonded together to the single bulkhead via buried #2 bare copper cable. Although I didn't do the CAD WELD routine (too expensive for me), I did make good compression joints with a heaping of anti-oxidant compound. It's probably not up to commercial standards but it's good enough for an amateur like me. :-)

Greetings from Texas!

I am selling the following equipment on behalf of its owner, who is an inactive ham and a co-worker of mine. None of this gear has been used in quite some time. It was working when it was last used. He is the original owner and builder of the Heathkit gear. His father owned the Swan gear before him. Everything needs a good cleaning, however, none of it is beat up. I have not powered up any of the equipment. Assume that the Heathkit and Swan gear will likely need some freshening up and alignment, and perhaps some tubes. The buyer will pay shipping charges, or come pick up the equipment at my home (in Lake Dallas, TX, which is just north of Dallas).

Heathkit station ..... $250.00 plus shipping
SB-300 receiver w/ 400 Hz CW filter (does not have AM filter)
SB-400 transmitter w/ crystal pack
SB-600 speaker
All interconnection cables
Manuals for all three pieces (SB-600 manual is a photocopy)

Swan station ..... $200.00 plus shipping
Model 400 transceiver
Model 420 VFO
Model 117B power supply
All interconnection cables
Manuals for the 400 and 420 in GIF format on diskettes
No manual for the power supply

Miscellaneous:
Homebrew low-pass filter ..... $ 10.00 plus shipping
(SO-239 input/output connections)
MFJ 949D antenna tuner ..... $ 75.00 plus shipping
(300 Watt model, w/ balun, dummy load,
lighted cross-needle meter, dual range)
Knight desk mic, looks like Turner 254C .. $ 20.00 plus shipping
(has driver's license number engraved on
front but should be easily restorable)

Contact ME if you need to buy any of these goodies!

Can anyone tell me how to read back the contents of the channel memories
on a RH256 Wilson radio? I have the programming guide but it does not
mention readback. On later versions it's easy- just put it in program
mode (jumper) hit Manual, then ch number.
But this does not work on the older versions.
Thanks.

I would like to buy a relatively inexpensive (less than $200) radio to tune around on listening to shortwave transmissions. I don't even know enough to know what I need yet (do I want SSB, for instance?) but would like to pick up something to start learning on.
I have some old AM/FM/SW tube radios that will pick up the Coordinated Universal Time stations, but don't seem to pull in much else. I think I want something with a digital readout.
Any ideas, folks??
Any thoughts on Radio Shack equipment? I seem to have problems with what I buy from them.

Thanks!!

Cruise the ham and swl newsgroups for radios built by reputable brand names in the real communications biz like Icom, Kenwood, Yaesu, Drake, JRC, etc. Except don't get involved with their handheld HF radios. $200 is a bit tight but keep cruising. Personally I don't have much time for the Sonys and Grundigs of the world, they spend the money on clock timers instead of the radios.

Before you buy any shortwave radio, I recommend you pick up a copy of
'Passport to Worldband Radio'. They have extensive reviews of nearly
all of the currently produced SW radios from small portables to table top
communications receivers. Plus they have extensive listings of SW stations,
frequencys and air-times.

You can get the book at just about any book store, and can also find it
at several places on-line such as Universal Radio.

Who the hell is "KLV"? And to my knowledge, Mirage has never manufactured legal HF amplifiers type accepted for the US market. I believe that this is beyond the amount of amplifiers an individual can legally sell as 'used'.

Someone forward to the FCC?

Chuck,

If that version has the BLP Host mode in it (Many 1270s dont, since MFJ took the host mode code out in later versions, to make more room for the mailbox), you can trying MultiComm Host. If the need be, MFJ can provide you with the 'x' firmware for the 1270 which will do the BLP Host Mode. In runs under any 32 bit version of Windows (95,98,ME and NT/2000)

I'm suprised that they didnt tell you about MultiComm Host, since they are reselling it now. You can download the demo at http://www.cssincorp.com/multicommhost

The same thing has happened to me with other types of equipment. After learning the hard way a number of times, I now check everything I buy thoroughly at the time of purchase, even if I'm not going to use it right away.

The sad fact of the matter is the vendor has now way of telling if you've used it or not, and to what extent. If the problem isn't reported during the warrantee period in most cases you are out of luck. I work with a number of Scout Troops that are the recipients of warrantee returns from various sources. You wouldn't believe the stories about the customers insisting their use patterns were like yours, and the equipment is absolutely thrashed. The best ones are where the age is verifiable by the serial number, and the customer has insisted that it's not more than a few months old. :-] These type of actions ruin it for the honest ones.

In my case a few of the problems were corrected by the vendors even though they were clearly out of warrantee (forward thinking business's looking for repeat business). I suspect the vendor in your case isn't out of line in a technical sense, but I doubt you will be a return customer.

Chuck:

If you have Windows98 you already have (most likely) a useable terminal program in Hyperterminal. It is not the best, but will get you going with no extra cost. From your start menu, go to Accessories, then Communications, then Hyperterminal. If it wasn't installed with Win98, you can install it from the CD now.

As you were told, any terminal program will work...that includes Procomm and lots of others that have been around for years in shareware or freeware versions. Even old CPM machines had IMP and other programs that were intended for communications out the RS-232 serial port and they will all work for packet.

Hello:
Just a bit of advice from someone who has bought a lot of radio equipment
that I found I didn't like or very soon outgrew due to finding out after use
that it didn;t have the features i wanted.
1. Tell us what the old tube radios you have are and we may be able to tell
you how to make them work better for you. they could be junk or you might
already have a suitable radio for swl.
2. Save your money and buy the best receiver you can afford with a
reputable brand name,, Then if you want to upgrade you stand a much better
chance of selling or trading it. If you were to buy an inexpensive receiver
there is a good chance it will be difficult to get rid of and if you are at
all
interested in swl you will outgrow it fast.
3. If you are thinking of getting into amateur radio you may want to
consider
buying a transceiver with a general coverage receiver. almost all
ham transceivers made in the past ten years have general coverage receivers
.
and most have am/fm/ssb/cw. Many are available for 350 to 500 dollar range.
and I have found them easier to sell than a receiver.

I have a nice Yaesu FT- 530 duelband ht for sale. Don't really want to
e-bay it.
This radio is in very good condition and includes the following:

Radio
Duck
2 wall wort chargers
2 1000 MA batteries
FNB-12 AA battery case
Cigarette lighter filtered power source & charger
MH-29 Display mic (controls radio and had freq. readout on mic.)
3 Yaesu soft cases (1 still in plastic)CSC-56-CSC-58
2 are for small battery and 1 is for the large battery (All these cases are
new and you cannot buy them any more)
Box

This radio has been modified for 800 mhtz. recieve ect.
There are two things that I need to mention;
I cannot locate manual but you can get one from yeasu for under $10.
I lost a couple of the small screws on the the bottom of radio between the
radio and battery but they are available also.
$220 Shipped - - -Not trades and firm on Price
Thanks
If interested, you can reply to:
gbaker@pacifier.com
I have feedback on e-bay if you want to look @ (gbaker)

This is one of the most UnProfessional things I have seen on this Newsgroup. Clint Bradford, The apparent radio sales manager of ADI/Pryme radios "lurking" on the group & actually "flaming" someone who is selling an ADI radio because he didn't like the asking price the guy offered!! The guy was asking about the same price as a new unit goes for (what else is new?), but was throwing in 2 accessories that woul normally sell for over $40 seperately (telescoping antenna & Alk batt case). But whatever the guy's asking price was, it is still bad taste & unprofessional for someone from the company to flame the guy (& not even mention where he works)! Next time at least use an anonamous email address to post that type of flammmatory nonsense.....

I need a schematic for a Yaesu FT-101B. I'm going to convert it over to 6146B finals based on the QST from May 1999. Send me an email, let me know if you can or will fax, scan and email a jpg or whatever. Anyone have an old manual or copy of one lose? Will pay for copy.

Thanks!

Hi and thanks for reading this posting. Get a great Christmas present for yourself! I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

You can build quite a bit of information from Internet sources:

He's formerly KE6EIL, and now listed in QRZ as:

KD7FXN
JUSTIN J. DE POLIS
2706 E JOSEPH
SPOKANE WA 99207-6356
USA

Obviously he doesn't believe in doing the required paperwork if he's really in Southern CA as his personal bio in QRZ claims. Supposedly in June of this year he's "back in southern CA."

If he's as prompt and conscientious in business dealings as he is in complying with the FCC requirement to file a change of address one should be careful if dealing with him. I guess a 20 year old as he is may feel that they can do whatever they wish without regards to the regulations???

His advertised phone number belongs to:

Vicente H Orosco

1001 S Belle Ave
CORONA, CA 91719
Phone: (909) 279-4193

There are no hams listed in the QRZ database at that address though there's a ham lsited at a different address on Belle but not SOUTH Belle in Corona. No other hams in the database have the last name DE POLIS and Mr. OROSCO is also not a listed ham.

He's also lsited as
romeo1432u@yahoo.com

This does:

§97.317 Standards for certification of external RF power amplifiers.
(a) To receive a grant of certification, the amplifier must satisfy the
spurious emission standards of §97.307(d) or (e) of this Part, as
applicable, when the amplifier is:

(1) Operated at its full output power;
(2) Placed in the "standby" or "off" positions, but still connected to the
transmitter; and

(3) Driven with at least 50 W mean RF input power (unless higher drive level
is specified).

(b) To receive a grant of certification, the amplifier must not be capable
of operation on any frequency or frequencies between 24 MHz and 35 MHz. The
amplifier will be deemed incapable of such operation if it:

(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and between 28
MHz and 35 MHz. (This gain will be determined by the ratio of the input RF
driving signal (mean power measurement) to the mean RF output power of the
amplifier); and
(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28 MHz.

(c) Certification may be denied when denial would prevent the use of these
amplifiers in services other than the amateur service. The following
features will result in dismissal or denial of an application for
certification:

(1) Any accessible wiring which, when altered, would permit operation of the
amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition of
components to change the amplifier's operating characteristics in a manner
contrary to the FCC Rules;

(3) Instructions for operation or modification of the amplifier in a manner
contrary to the FCC Rules;

(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;

(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;

(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:

(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);

(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and

(iv) Be capable of sustained operation at its designed power level.

(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than 50 W mean power; or

(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the Citizens Band (CB) Radio Service.

Hi all,

I lost one of the 2N3771 pass transistors in my Astron RS-35A. There are no decent local electronics suppliers near me, so anyone know of a usable Radio Shack replacement? Also, I guess I should replace both transistors in the pair if I use a substitute part?

Thanks in advance,

- Seth N6BMB

Jukeboy,

Two years ago, I bought a Radio Shack DX-398 and use it every week to listen to the amateur bands, SW broadcast stations, and occassionally, AM and FM broadcast stations. This is my only SW radio and I enjoy it. For the price, I think it is a good deal. I recommend two accessories to increase your listening enjoyment: 1) buy an AC power adapter to conserve the batteries, 2) use an external antenna. I use the copper pipes of my hot water heating system as my antenna. My setup is susceptible to interference from the TV located in the same room as my listening post and our PC in an upstairs bedroom.

I consider the DX-398 a good inexpensive SW radio.

I was wondering if anyone had the instructions on how to convert a CB swr meter to 2 meters..
I saw this in 73 or one of those mags a few years ago, but cant find any info on it now..
I have an old Micronta that I would like to convert..

Thanks!
Steve

Hey Monte,

Just FYI, Radio Shack has thier little dual bander on sale for around $199. It's got the dtmf pad and everything.. The only problem with it as well as a lot of the other pocket radios is that they don't have a lot of power.. Check it out..

From: Roger Halstead <rdhalste@tm.net>
Message-ID: <zgTZ5.1070$LR2.71931@monger.newsread.com>
Source record: 67553

That's what I was looking for and then discovered (with a bit of math) that with all the runs of coax, I can get almost as much, or even more signal out with a remote mounted 300 watt solid state at the top of the tower than the big KW inside the shack. Plus I end up with a better receive signal due to the receive preamp located close to the antennas.

I'd still like to have one of the big Henrys on 440 though...course with a full KW I only have a bit less than 250 at the antenna.

I'd like to know why you used the State Of Utah Centeral Emergency
Management's club call to sign your post with.

Thanks for the heads up. If you're in the Salt Lake City area, we'll be
watching the bands closely with the DF equipment.

So, it's your equipment and you're going to use it? That's sounds like a
premeditated crime about to happen. You cannot LEGALLY use that radio with
out the proper license.

It might be cheaper to run down to RShack and see what they have in
stock :-)

Or you can just use you cb meter on 2 -- all you need are relative
readings -- you simply want a lot more rf going out than in. Maybe
your meter will work just fine, as is...

5187. Power out problems on FT-8100 and TM D-700A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-14 01:40:22 UTC
From: W0RSR, Mike
Message-ID: <3a382357.41253280@news.supernews.com>
Source record: 67564

I have noticed that there is significant power out differences depending on frequency with these two radios. I tested both with a dummy load and found that the Kenwood puts out 50W (High pos) when fadion is tuned on low end of 2 meters, around 144.5, but only about 32W on 146.5. The Yaesu seems just the opposite with the expected output of 50W on 146 and about 37 W on 144. Power was measured with a Bird wattmeter. Is this an alignment problem, or is this normal?

Any help would be appreciated.

All:

I have decided to sell a computer that I originally purchased for my wife. The machine is a Toshiba Tecra 550CDT. It has a 266Mhz processor, 96MB RAM, 4GB hard disk, USB, 20X CD, 56K modem) see here for exact spec - http://cdgenp01.csd.toshiba.com/content/product/pdf_files/detailed_specs/tecra_550cdt.pdf

I will be asking $390.00 plus shipping. This is exactly what I paid for it 8 months ago. I would prefer to sell it here on the west coast or even in norther calafornia to avoid shipping. However, I will ship it if needed. The computer is is really good condition and has not been used mobile. It come with Windows 95B but no other software due to licencing restrictions.

Please email me at

brumey@subdimension.com

Now the conservatives can fill the FCC with people that will oppose the ARRL and work to improve amateur radio and license requirements. If the ARRL really cared about amateur radio they would have done so by sending monthly petitions to the FCC proposing ways to improve the service, but it can be clearly seen that the ARRL doesn't care. They want ham radio to be like CB and hams to be like CBer's... crude, stupid and waiting for their next free ham radio license handout.

5199. Charger for Yaesu FNB-41?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-14 13:43:23 UTC
From: ham_guy@webtv.net
Message-ID: <26392-3A38CE7B-17@storefull-136.iap.bryant.webtv.net>
Source record: 67577

I am the proud owner of a Yaesu FT-50 and a pair of FNB-41 clamshell batteries. The charger that I use (wall wart) has a big drawback: It won't charge the low battery unless the radio is attached, since the radio contains the receptacle for the charger plug.

What good is it to have a fresh battery if the radio is tied up on the charger, along with the low battery? This seems like a dumb way to do things. So here is my question:

Does anyone offer a battery charger / conditioner that will charge these FNB-41 clamshell batteries WITHOUT the radio? I have looked a several ads, such as the MAHA, but they don't say anything about application. How about the Yaesu "drop in" charger? Yaesu didn't have anything to say about their application either. Anybody have one of these? Thanks, JJ

I would think that that 10m is not as "line-of-sight" as VHF, making it
better for simplex communications in rolling wooded terrain. Could it
be because VHF "punches through obstacles like foliage better that you
are getting better range?

I used to have an FT-51r c/w an NC-50 Twin Slot Rapid Charger. The NC-50 has inserts that allow you to Charge a range of Yaesu Handies/Nicad Packs & you could charge a Pack without the Radio attached. Maybe the NC-50 is still available.....
Perhaps someone has one gathering dust they would part with leaving you to just buy the correct Insert?

Steve,

Most CB vswr meters will work well at 2 meters. I've been using the same cheapie CB vswr meter for over 23 years and have had no problems with it. All you're looking for is the lowest vswr you can get. It makes no difference what the actual value is. Once it's as low as it will go, it's as low as it will go.

Generally, enthusiasts of the VHF/UHF bands don't use RG-8 for feedline at these frequencies for the same reason you state below: excessive loss. Andrew LDF4-50A or LDF5-50a is a more prudent choice. If you would like to get serious and wish to purchase some I have ~2000' of LDF5-50A for sale, as well as 600' of LDF4-50. Check the specs at www.andrew.com ; you won't see the >6 dB loss at 440 like you are seeing now....

> Back to AO-10

Maybe, maybe not. From http://www.amsat.org/amsat/news/ans.html

"Early Wednesday, December 13th, telemetry transmissions from AO-40
stopped while work on the 400 N propulsion system was in progress. An
investigation by the AO-40 development team has begun. They are now
waiting for certain on-board software events to occur on Saturday
afternoon, December 16th. These are programmed to start a spacecraft
emergency routine called 'command-assist' which attempts to re-establish
communications. This offers the best chance of recovering evidence of
the incident which made the telemetry transmissions stop."

Exactly...I've been saying this for years...there's no huge difference between HF SWR meters and VHF ones, as long as you can get full scale deflection in the forward position the the SWR reading will be fairly accurate, how could it be otherwise?...it's quite common for those built for VHF to be less sensitive due to the higher yield of DC to drive the meter at VHF, but as I say, as long as you can get full deflection in forward then you've got it made.

both have continuous coverage and are great scanners.
I barely used them. All instructions and extras are included.
Call or email me with an offer.

I paid $475 for the MVT9000 and $250 for the Pro26
You need to include shipping in your offer.

I will send them out as soon as payment is cleared.
Email me if you have any questions.

Some CB type meters will work at 2 meters ok. I have used one of the very cheap ones at 2 meters and even the 220 mhz band and it is ok. At 440 mhz it does not work very well. It will go full scale in the forward direction and close to full scale into a very good dummy load in the reverse mode. As the line inside the swr bridge becomes long interms of RF then the ability to seperate the forward and reflected power is lost.
I have a heathkit meter that is good for 3 to 30 mhz and maybe 50 mhz, but it is no good at all at 2 meters and above even though I can get a full scale setting on the forward power.

Also most swr meters will take less power for a full scale setting the higher in frequency you go. Youall seem to have it backward. The higher frequency meters will work at lower frequencies if you can develop enough power to set them, but the lower frequency meters will not always work on a higher frequency.

5221. Best HT speaker mic?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-14 22:43:46 UTC
From: TR <w7trx@my-deja.com>
Message-ID: <91bif1$j1f$1@nnrp1.deja.com>
Source record: 67499
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Greetings,

I have just purchased an Icom IC-T22A 2m HT. I want to get a speaker mic while using it as a portable base radio.

My requirements are good sound, both TX and RX. Small size is not needed and is probably a negative for my needs.

I have looked at the stock full size Icom HT speaker/mic (HM-54) and was astounded at the $80-$85 price tag. I believe you typically get what you pay for, but with OEM radio accessories, this rule of thumb can get stretched pretty thin. Especially when aftermarket speaker/mics hover around $20. Maha boasts of a 500mW speaker (MH-800S)for better sound at that price.

What is the real scoop here? What is the best HT mic regardless of price? Is the Icom mic worth the hefty price tag? Any experience with other mics like Maha or Pryme?

Thanks for your help.

Greetings,

I have just purchased an Icom IC-T22A 2m HT. I am looking for a high quality leather protective case for it. The Icom case is a cheesey naugahyde case. In the mean time, I have a protective neoprene case that does a fine job, but the radio cannot be used while still in the case.

For my Trunk Tracker scanner, Radio Shack had a really nice, custom fit, leather protective case at a fair price. My cell phone also has a very nice form fitting leather case.I'm looking for something more like this for my Icom HT.

Thanks for your help.

No.

All that is known is that AO-40 abruptly went off the air during ground station operations. AMSAT have confirmed this. There was an anomaly with the 400N thruster firing. Again, AMSAT have confirmed this.

Exactly what has happened is not yet known, so it is inappropriate to declare the satellite lost.

There are several levels of recovery, and the controllers are working on them. Let them do so.

>
>Ron
Well Ron, if you read it below, it doesn't say that an amplifier must need at least 50 watts of drive in order to receive a grant of certification, it says that in order to receive a grant of certification, it must satisfy the spurious emission standards of 97.307(d) or (e) when driven with at least 50 watts. Perhaps English isn't your primary language. I can't tell because you don't have the balls to say who you are.

Steve W2ZR

(a) To receive a grant of certification, the amplifier must satisfy the spurious emission standards of ï¿½97.307(d) or (e) of this Part, as applicable, when the amplifier is:

(1) Operated at its full output power;
(2) Placed in the "standby" or "off" positions, but still connected to the transmitter; and

(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified).

Personally myself when I started out with HAM Radio I was using a HTX-202 with a discontinued Radio Shack speaker mic. The speaker mic only cost me $5.00 dollars due to it being discontinued.

With the 202 the mic was a perfect match because the mic on the radio was generally too loud so I used the speaker mic and it evened out.

Hi:
I'm considering getting started in amateur radio but know nothing about it (sorry). We have an RV and travel some in the summer. Seems like a ham radio might be fun/useful. Considering a handheld unit. As I understand it the technician license would let me operate on 2M band?? What about 440? Should I be looking for a dual-band HT? What features do I look for? Can I send email or make phone calls this way? Will a handheld work from inside a vehicle? Finally, I've got up to maybe $300 to spend. Who has good prices? Sorry if you've already answered these questions a million times. Thanks in advance for any info.

5240. JDR Model 3500 Dual-Trace Scope

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-15 04:43:43 UTC
From: "Michael D. Harmon" <mharmon@tranquility.net>
Message-ID: <3A39A17F.258B5F78@tranquility.net>
Source record: 67517

A friend of mine has "inherited" a JDR Instruments Model 3500 dual-trace scope. I offered to help him track down some specs (possibly user's manual?).

I have done an AltaVista search using a number of search words and haven't found any info on this unit. I called JDR Microdevices, thinking maybe they made it, but they claim they never built a model 3500 scope.

Can anyone help me with my info search? A link to a manufacturer's Web site or even the NAME of the manufacturer would be helpful. (I suspect it may be a Taiwanese or Chinese copy of some well-known scope). Thanks to anyone who can give me a lead to follow!

Mike Harmon, WB0LDJ

Message-ID: <3Wh_5.2567$9U1.95674@news.inreach.com>
Source record: 67518

Dudley:

As I understand it the technician license would let me operate on 2M
band?? Yes

What about 440? Yes

Should I be looking for a dual-band HT? That is probabaly the best way
to go

What features do I look for? All you really need are the basics.

Can I send email or make phone calls this way? There are some telephone
autopatch
repeaters, but they usually have access codes given to those who financially
support the operation...
in your travels a cell phone will probably be more useful. There is an
e-mail system called Winlink, but
I don't think you will find any access stations on VHF/UHF.

Will a handheld work from inside a vehicle? Yes, but an outside antenna
will make a big difference.

Finally, I've got up to maybe $300 to spend. You can find used HT's on
eBay and also on the
rec.radio. swap newsgroup. Who has good prices? You'll need to shop
around for something in
your price range.

> Sorry if you've already answered these questions a million times. Thanks
in
> advance for any info.

Hope you will get some other info here.

Roger K6XQ

5242. Re: 80-10 Meter Amplifiers For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-15 05:52:38 UTC
From: Ron <NoSpam@nospam.com>
Message-ID: <Gki_5.776$W76.53530@typhoon.sonic.net>
Source record: 67519

To wit:

(c) Certification may be denied when denial would prevent the use of these amplifiers in services other than the amateur service. The following features will result in dismissal or denial of an application for certification:

(1) Any accessible wiring which, when altered, would permit operation of the amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition of components to change the amplifier's operating characteristics in a manner contrary to the FCC Rules;

(3) Instructions for operation or modification of the amplifier in a manner contrary to the FCC Rules;

(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;

(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;

(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:

(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);

(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and

(iv) Be capable of sustained operation at its designed power level.

(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than 50 W mean power; or

(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the

Citizens Band (CB) Radio Service.

Sure! Just go ahead and have a ball. We use two meters all the time to coordinate hunting activities. A couple of the guys have licenses but not everyone.

Just be sure to use plenty of 'ham-speak'. ya know. Refer to yourself as 'we', put a few 'destinated' in there, throw in some 'hi hi' etc. You'll pick up on it.

Hello, I have alot of 80-10 meter amplifiers for sale, after the closing of
a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable
power output, and have a 20DB receive pre-amplifier)

KLV 100 watt unit: $89.99
Mirage 300 watt unit: $175.00
Mirage 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

Mirage 600 watt: $399.99
Mirage 800 watt: $435.99
Mirage 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

Mirage 300 watt: $599.99
Mirage 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justinde@pacbell.net
You can also check out my web site for more information:
http://www.geocities.com/ham2way2000/index.html
Quantity pricing available, and prices can be negotiable, thanks, and 73's

5254. FS: Rare Johnson Viking Invader 2000

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-15 17:08:44 UTC
From: Al Dolgosh <al.dolgosh@hamradio.org>
Message-ID: <3A3A501C.D0157832@hamradio.org>
Source record: 67530
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Here is an E. F. Johnson collector special.

I recently acquired a rare factory original - not an upgrade - E. F. Johnson Viking Invader 2000 transmitter in very good condition with the intention of restoring it to "exellent" and using it. It was in working condition and in daily use by its previous owner when I acquired it.

I find I no longer have the time or inclination to restore it (should only require some light cleaning and slight cabinet paint scratch touch-up), and am looking for someone who has the same ambitions I had.

For the person who is not a Johnson aficionado, here is a quick operational description. This is Johnson's fine filter-type 80-10 meters SSB transmitter with a pair of 6146s driving a pair of PL-175As to 2000 watts PEP SSB, 1000 watts CW and 800 watts AM. The final amplifer stage can be switched out and the unit operated as a 100-watt only exciter. The transmitter is a complete desktop unit, with a separate floor-mounted (on casters) power supply. It is complete with some spare used tubes, and two original owner's manuals. I even have the original purchase receipt from April 15, 1963.

I am describing this as rare since, next to the Viking 6N2 Thunderbolt (285 units), it is the rarest of the Viking amateur radio equipment with only 386 of these units were produced by Johnson from its introduction in 1960 until it was discontinued in 1964. This is one of the later units - one of only 34 produced in 1963.

The firm price for the complete Invader 2000 as described is $500.00 - pickup only - or I will meet halfway up to 200 miles from Cleveland, Ohio. I will not attempt to ship it since I cannot adequately pack the heavy power supply unit.

Al - K8EUR

A lot of folks put pieces of their hearts and souls into building it
and getting it launched, Hans.

A little respect is not out of order.

Hopefully it's just a software problem that will resolve itself - as it
was designed to do.

Connect a counterpoise wire first!

Twiddle the knobs for maximum MFJ-931 meter defelection while transmitting.

I used one in a second story room.

Download the brief manual at:
http://www.mfjenterprises.com/manuals/

Source record: 67450

Greetings...

I have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer?

Tnx, es 73 de N9LXX~~~

MFJ 1278B multi-mode data controller S/N 30022295. Includes MFJ 1289M Multicom software/cable for Windows and MFJ 1282B Commodore 64/128 software/cable.

The TNC runs Packet, AMTOR, PACTOR, RTTY,ASCII,CW,FAX,SSTV,NAVTEX and memory keyer. Includes all manuals, original boxes and cables.

I bought the TNC several years ago and used it once, put it back in the boxes (3) and they have been sitting on a shelf ever since. The controller is in as new condition.

$149.00 shipped to CONUS.

Thanks,

5314. IC-706MKIIG vs FT-100D ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-16 22:24:04 UTC
From: Richard Friedman <rchrd@rchrd.com>
Message-ID: <3A3BEB82.EA8FC827@rchrd.com>
Source record: 67489

I'm a new ham, KG6EMF (tech, but studying for general) and I'm looking
for a xceiver rig for mainly DX on 20m-6m. I want to use it both at home and
in my Camper (mountain tops, etc, but not while driving).

It looks like both the IC-706MKIIG and the FT-100D fill my needs,
but which one? They're both about the same price (and not cheap).
I've heard pros and cons for both. Local ham radio shop says the
100D's keep coming back for repairs.

Has anyone agonized over these and done some comparisons you'd like
to share with me? I'm in no rush to spend the cash, but I want to
make sure I'm making the right decision here.

Thanks in advance.

5315. Re: IC-706MKIIG vs FT-100D ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-16 23:38:46 UTC
From: Ron <NoSpam@nospam.com>
Message-ID: <a2T_5.1697$W76.62854@typhoon.sonic.net>
Source record: 67490

It is a tough decision to make. I made all the comparisons, and decided that they were too similar to declare a winner. (sounds like the Presidential election HI!) I read the NG posts about the failures of the FT-100's and was a bit bothered by that. In the end, I decided there was "safety in numbers" and went with the 706MKIIG, and so far, I have not been disappointed.

I recently spoke to a ham who owns one of each rig, and he says both are great radios, and that he has had no failures or problems with either one. He said that if he had to give one of them up, it would be a pretty hard job to choose which one.

At the prices they sell for, I don't think you can go wrong with either one...they both have a lot of features, cover all the bands, can work nicely at home, mobile or portable.

Hello Rich
I had the same question and I asked my dealer his recommendation, his exact words were If you gave all the salesman in his store the choice to take whichever one they wanted for free, he said there would be a stack of the yaesu,s left behind . they had some problems with the ft-100 I am not sure what. He also said the Icom has been pretty much flawless. Iam not bias either Iam a yeasu guy myself

Looking for a few 3CX800A7's pulls that I can use as backups.

Let me know what you have in the way of hours on them and condition.
Pics would be appreciated by e-mail.

Include what you are asking.

73's Owen KB5XE

Looking for information on the DC voltage of the optional battery that goes in the AOR 7030? Has anyone used a substitute battery? I believe the AOR unit is a Lead Acid type battery so the voltage is probably more like 13 to 14 volts rather than 12 volts?? AOR charges a hefty $200.00 for this option! Any information would be appreciated. Please email me at rlonn@home.com

5326. M175 Amp... What is it?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 04:44:59 UTC
From: Jack Sallade <jsallade@iquest.net>
Message-ID: <3A3C44CA.16CB359A@iquest.net>
Source record: 67401

Hi all,
I aquired an amplifier that is labeled with M175 and the words 10M amplifier on the front panel. On the back it says "for export only". Other than the obvious, that it's a 10M amplifier, I wondered if anyone knows what it is and what sort of in/out it is designed to handle. It also has a front panel rotary labeled L/M/H which I presume affects the power level output. I have connected it and seen that it does amplify to some extent but don't know what to expect and only recently got a power supply with enough capacity that I am willing to start experimenting with it again. Any hints? Thanks in advance and please email me directly with any info as I may or may not get back to the newsgroup before your reply expires off my ISPs server.

5327. Re: IC-706MKIIG vs FT-100D ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 04:57:48 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A3C47CC.62AD@bellsouth.net>
Source record: 67402

```
I *almost* bought the FT100 last fall. But, I was warned about the
difficulties of the rig while enroute to the dealer's booth at the
hamfest. I really wanted to try out the Yaesu, but I got cold feet
after hearing about the problems. Since I already had an IC706 which
has performed flawlessly, I went with the MKIIG. I haven't been disap-
pointed. I hope Yeasu gets the troubles ironed out.

From: Richard Friedman <rchrd@rchrd.com>
Message-ID: <3A3C559A.4591E2A7@rchrd.com>
Source record: 67404

Thanks to everyone who has responded to my question, both here
and privately. It seems the Icom is "winning" hands down. Or atleast
those happy with the Yaesu aren't reading this newsgroup %-) .

I'm leaning now quite strongly towards the 706MK2G, altho one
person commented that for in-house and mobile use (but not while
driving, so I guess that's "remote" even tho its inside the car,
but stationary...) I should consider paying the extra $$ and go
for the Icom 746. (hmmm. I need to talk to my bank account.)

Someone also told me that the Yaesu ATAS antenna has a problem if you don't give
it a good ground plane. He said it works best if you actually drill a hole
in the roof of the car to mount it. Since I'm considering a rig that's
totally portable (no holes in my new Eurovan Camper please!) I don't
think so.

Thanks again. This has been really very helpful so far!

```

Source record: 67403

My only bitch about the Icom is that the DSP is poor. They call it an "AF-DSP", meaning it's not in the IF stage like it should be. And, you can't see the LCD if you're wearing polarized sunglasses - the display goes completely black.

If you have the choice between a used 706 mark 2 and a used or new 706 mark 2G, go for the 2G. Primarily, the G has a vastly easier-to-use repeater split setup, it can do 440 (the mark 2 can't), it has higher output power on 2 m, and it has backlit keys (the mark 2 doesn't).

Check out my 706 site: http://www.tibpriors.org/ham/icom.htm (includes a fix for the LCD problem)

One of the things that's on Yaesu's side is the ATAS-100 automatic antenna. It plugs into the FT-100d and works seamlessly with it, or so I understand. At $300 or so it's not cheap, but then you don't need a tuner (Icom's AH-4 is $300 some) so it may be less expensive overall.

In an area of high intermod, both of these units proved quite useless on 2 meters and 440. They were intermod sponges. On HF, their performance is very so-so, not the calibre of a dedicated HF rig. I have tried out and would not own either one because of their sacrifice in performance to cover all the freq ranges.

Hi,

If you need all of the bands (HF-6 2- 440) what about getting a duelband radio that would do cross band ect and get a seperate hf radio like the alinco for hf and 6. You have much more flexibilty & features, You can monitor more than one freq., you can xband if you need to and you are spending about the same or even a bit less, depending on what you buy for a duelband & HF.
Just my thoughts......

MFJ 1278B multi-mode data controller S/N 30022295. Includes MFJ 1289M Multicom software/cable and MFJ 1282B Commodore 64/128 software/cable.

The TNC runs Packet, AMTOR, PACTOR, RTTY,ASCII,CW,FAX,SSTV,NAVTEX and memory keyer. Includes all manuals, original boxes and cables.

I bought the TNC several years ago and used it once, put it back in the boxes (3) and they have been sitting on a shelf ever since. The controller is in as new condition.

$149.00 shipped to CONUS.

Thanks,

I've had a mIIG for about 3 months and like it a lot - except the menu/function key arrangement means a LOT of flipping around to accomplish a task.

Sensitivity seems very good, too.

The price just came down to around $924 also.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

FS 55' CZ-454-FS crank up-lay down Tristao tower with Towtec 102A electric raising winch. All mounting hardware. 3-20' sections, nests @20'11".

From shipping docs:

"Safely supports most tri-band beams such as the Mosley TA-33 and TA-26 and the HyGain TH6 DXX and others in 75 mph winds without guying (over 16 sq ft in 50 mph wind.) Designed for the ham with no space for guy wires. Safely and easily lowered during very high wind conditions. Large top section sizes for installing CDR and other rotators inside the top section for maximum strength. Removable rotator mounting plate furnished with all models. These free standing CZ crank up towers have 12-3/8" OD top sections and "FS" type hinged bases. Three 1'X36" anchor bolts and hinged base flanges are included for complete installation without a wall bracket."

Prefer pick up in Charleston, SC area. A very well priced unit @ 900 firm. Interested parties E-MAIL ONLY n4zn@amsat.org . Please, no tire kickers, no critics. You may leave a name/phone number to call.

Hi Robert,

I had a 7030 a few years back and seem to recall the receiver needs 15VDC in order to meet its IP3 spec. I picked up a 12V-->15V converter and ran it portable that way.
It should probably be OK at reduced IP3 on 12V

5363. Icom IC-706Mk2G Tuner Socket?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 19:47:47 UTC
From: Wink <wink@rpa.net>
Message-ID: <91j1sk0315h@enews3.newsguy.com>
Source record: 67438

Hi,
I have a new IC-706Mk2G for which I bought a 706 Tune Control. The tune control works great but I found that the molex tuner socket that it plugs into seems to be loose. Is this typical of the 706's?

Thanks,
Gary N2UM

5364. Re: IC-706MKIIG vs FT-100D ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 20:19:11 UTC

Is it a good idea to publicly admit using a radio not type-accepted for FRS?

Afterall FRS allows for a maximum of 2.5kHz modulation and any ham rig you
use will put out 5kHz.

5371. Re: Kenwood TH79A in X-band repeat??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 22:22:39 UTC
From: Frontier News <ihi@frontiernet.net>
Message-ID: <91jecg$t4e$1@node17.cwnet.frontiernet.net>
Source record: 67447

John,

I believe it applies to all TH79A units, but I am not sure. It was documented in an Addendum to the manual, which you can look at (with Acrobat reader) on the Kenwood site. Briefly, to put it into dual band mode, get it set to the two frequencies, then press [F] + [moni] keys. ptt will flash indicating it is in dual band mode. to leave dual band mode press [moni]. Tone alert must be off and automatic band change will not be active when cross band mode is on.

One other word of caution, the radio is designed assuming a duty cycle of 1 min transmit and 3 min receive, so be careful not to get it too hot. Probably best not running on high power. Also, don't forget the regulations re. transmitter identification.

73,

Jack, WA2IID

5373. Looking for a memory keyer w/PTT.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-17 23:43:55 UTC
From: X@Y.Z.net
Message-ID: <slrn93qjtr.6he.X@animas.frontier.net>
Source record: 67349

I'm looking for a memory keyer that has a true PTT output
in addition to the KEY line. I want to run in 'beacon mode'
on either 6M or 2M, and both rigs require PTT prior to being
keyed, *AND* I want the receiver open between message cycles.

The MFJ has pretty much what I want *except* the PTT capability.

TIA es 73,
Jonesy W3DHJ

Problems with sensitivity when recieving around 15 metres and bottom of 11 metres.

Any clues?
seems to work very well around 10A 10B 10C and 10D.

Tried everything.

Suspecting PB1183 Low IF boards IF amp Q3

if any information where to look and how to bring this thing back to life, would be much appreciated.

Email ezypezy@ureach.com

Dan the FT 100 has a deviation setting of 2.5 as well and will TX into FRS. It is illegal to do so but it will. Check out www.mods.dk for the mod on the FT 100.

Richard,
I am one of many who is absoluty hapy with my FT 100. I use an ATAS as well
and it is used on a magnet mount. The FT 100 has twice the Receiver of the
only icom I worked on that was a 706. Menu functions are easier to access then
the Icom rigs. There is a rumor that the Noise Blanker actually works on the
FT 100 and mine does a fantastic job mobile. I have had many compliments on
the audio quality and the receiver sensitivity in portable operation such as
Scout Blast 2000, Field Day 2000, ect. Rig does an excellent job on PSK 31 as
well and has been used in this mode from 2 mtrs to 80 mtrs. I can't say enough
about how happy I am with mine and wish you the best of luck in your choice.

Message-ID: <KRp%5.1061$xU2.91462@news1.atl>
Source record: 67373

Hi,

I have had all 3 flavors of 706 and the FT-100. All very good radios for what they do. The first 706 only had 10 watts on two meters and required mods to hear well outside ham bands. The mkII came in two flavors with and without DSP, it had 20 watts on 2 meters, It is more selective and sensitive than the original. The G is the best of the series adds 440 and 50 watts on 2, its selectivity on HF is superior to the FT-100, FT-100 is better on VHF FM, has a better squelch and DSP, but the Icom is superior in ergonomics, access to controls when transmitting, moving the radio in and out of the car, AND the Icom is rated for continuous duty at 100 watts, the FT-100 less than 50%. The FT-100 uses pigtails for RF outs which wear out when taking a radio in and out of a car. Practically speaking the Icom is superior, though some features seem nicer on the FT-100 their use in a mobile environment is dubious and maybe dangerous. All features selected on the Icom are visible throughout the menus while setting on the FT-100 are only revealed when it the particular menu.

As for the Atas-100, its slow to QSY, doesn't work well with any kind of RF ground problems. And when its perfect it only works as well as any 5 foot HF antenna, you can get a full size screwdriver for $150+, that will get out 4 times better. In a 5 footer, save lots of money get Pro Valor hamsticks ($20 each) for the few bands you will probably like to work from the mobile. If you want to QSY get a Diamond MV-3 or HV-7 they can hit something and stay in tune! And you have instant QSY to 3 bands at a time. I hear the spider is good too but no personal experience.

Hope this helps I am selling my mkII now to upgrade to the G myself. Anyone want a perfect mkII for $650?

In the house I love my Icom 746, a bargain in the radio world IMO. I also have an Elecraft K2, superb radio, if you want to build and learn....

I'm having a problem with the lcd screen of my Kenwood TS-940. When I turn on the rig, sometimes the screen works, sometimes it's garbage, and sometimes it's just blank. opening the case and pushing the reset button for the display gets everything back, but many times the clock is running MUCH too fast. I can't find anything in the manual about this, has anyone else had this problem and found a fix?

Message-ID: <3A3E5073.2508@bellsouth.net>
Source record: 67379

Sandor,

I am very happy that you are getting excellent results with the FT100. It was actually the one I wanted last fall when I bought the MKIIG. I *believe* I have quite good receive and everyone tells me it sounds fine. It does have excellent audio in and out. The thing about 44 around here is, it seems to be a waste. Plenty of repeaters and no one talking! Since I got it, I used 440 once and that was on SSB, can ya believe it?

On the down side, and I find this to be true of ALL 706s, I don't like the squelch. It is either ON or OFF. You can't set it on the threshold for weak signals because it will pop in and out-VERY distracting. If you set it deep, you miss weak signals. Definitely don't like that! Otherwise, both my 706s perform quite well. BTW, anybody know a "cure" for the squelch thing?

5407. HELP! How to access memory ? Icom T22 HT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-18 18:56:03 UTC
From: TR <w7trx@my-deja.com>
Message-ID: <91lmk0$46c$1@nnrp1.deja.com>
Source record: 67382

I have a new Icom IC-T22A 2m HT. It has memory for 40 channels using alphanumeric labelling or 80 channels if you chose not to label.

I can only get mine to access 10 channels. I have tried a full CPU reset. I have tried the key strokes for setting 40 and 80 channels. I have tried accessing memory via tuning knob, up down keys, and keypad entry. All I get is 10 channels. I've read the manual cover to cover to no avail.

What is the trick here? How do I get access to all 40 channels?

Thanks, Tracy
W7TRX

Message-ID: <91lqh0$7o9$1@nnrp1.deja.com>
Source record: 67384

I just talked to Skip at AES Milwaukee. He said that Kenwood has told them they could begin shipping radios to AES in late December AT THE EARLIEST. Skip thinks that most likely, they'll start getting them a little after that. As for me, I think I'm going to wait it out until all the bugs are fixed and there's some competeing products on the market. Those Icom IC-706MKIIG's are looking VERY attractive at $904 at Texas Towers! Especially considering they were around $1700 when they firs came out...

5409. Re: IC-706MKIIG vs FT-100D ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-18 20:15:20 UTC
From: Jethro Jumbalaya Twain <qwasty@hotmail.com>
Message-ID: <91lr8g$8ck$1@nnrp1.deja.com>
Source record: 67385

I don't own either rig, but I've had so many problems with trendy, flashy Yaesu gizmos that I won't be buying anymore for a while. I was hoping that the Yaesu FT-817 would be a little more polished than their last line-up, but so far the problem/annoyance reports are starting to come in at a steady pace.

Of all the radio info I've pored through over the years, it seems like the Icom IC-706MKIIG is a real winner. Every company has it's duds, but the 706 is tried and proven. Icom has come out with so many updated and improved versions that it's obvious they're concerned with the quality of their products. I can't say that about all of Icom's stuff, however, since their handhelds suck. (Broken battery clips and such)

Kenwood seems to consistently make really good products too. I'm waiting for customer comments on the new TS-2000 when it finally ships.

All in all, I've been very disappointed with Yaesu crap. They all have really snazzy features but none of them work that well. In the case of my FT-50RD, some of the features documented in the manual weren't even functional in their production version! Those who own FT-50's might be familiar with the buggy DVRS, for example.

Anything official related to AEA would be on the www.timewave.com site, since they bought all the AEA amateur products.

FWIW, I sent them a rather long e-mail regarding upgrading my PK-232MBX three weeks ago and haven't heard a word. Considering all the money I've plunked down on that box for upgrades, it just isn't worth another $150 or so for more, and another $50 for a Win9x compatible program to use the thing.

5418. ICOM IC-2-sra

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-19 03:19:07 UTC
From: bshale@north.nsis.com
Message-ID: <3a3ecb26.7706713@news.ng.nsis.com>
Source record: 67394

Bought my IC2-sra new a few years back. Worked well up until
last year. It's been in the shop a lot lately. First trip was for a
blown voltage regulator and new backup lithium battery. When I got it
back, the display was defective and after a few weeks operation the
lithium battery maxed out... again. This time I sent my entire system
to the shop. Result... . New voltage regulator was toast. BC-72 rapid
charger was toast. Certified repair shop recommended that the charger
be junked. "They had no schematics from Icom." They replaced the "new"
worn out lithium cell at no charge. NI-Cad battery packs were worn
out. Where to from here?
Replaced both battery packs and bought a new fangled MAHA CH-777
universal charger. The rig's display now goes blank whenever I plug in
the RX antenna. Requested that the repair shop review their work on my
rig. They sent me, at my request, a replacement jack for the RX
antenna. I replaced the jack but the display problem did not go away.
New problem. After the replacement, the PTT and Function buttons on
the side of the rig will not work. I can TX using my external
microphone's PTT. The Function button is critical to entering memory
frequencies. What now?
Would anyone out there have a view of the IC2-sra's PC board layouts?
I would like to try and replace the defective Function circuit but
can't find the components on the board. I can live with the blank
stare of the LCD display but the rig is useless to me without
memories. Sent request to ICOM homepage hoping they could suggest a
repair. Any surprise.... Still waiting. Hope someone can help.
Thanks..Scott. VE1AFN. >>>

5419. AC Wall Charger For Portable Power Station?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-19 05:53:10 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <3A3EF7C6.92121628@datacomm.com>
Source record: 67395

Can anyone supply the specs for the Wall Wort style AC charger for use with the Portable Power Station by Hamcontact?

I have misplaced mine, and knowing the specs would assist me in deciding which of the many loose ones around my shack is the appropriate one. :-]

I know it's DC, and I suspect at least 16v.

Thank you.

Louis

5420. NEWBIE HELP: What do you recommend for...?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-19 08:25:06 UTC
From: Rubblehead <banktank@ix.netcom.com>
Message-ID: <eq6u3to5ii03ljrbn78ear0vaf4is9egtl@4ax.com>
Source record: 67396

I don't know anything about this stuff so I'm turning to this group for help.

Here's the issue. I fish a lot, sometimes in some fairly remote areas, and I do worry that if anything ever happened, I'd have no way to contact the outstide world for help. Also, when I fish closer to home (within 10 miles), I'd like to be able to keep in touch with the 'base camp', as it were.

So here's the question: what is the best method of keeping in touch with the outside world? Forget 'cell phones.' Half the time they don't work in the areas I'm in and the other half the time they don't work. Is there a portable radio system you can use to both receive and broadcast that is strong enough to (a) keep in touch with a base camp (and what unit might the base camp need?) (b) have enough 'broadcast power' to reach local civilization in the event I get in trouble? My preference is that I'd like both units (home and base) to be portable and battery powered.

Thanks to the group in advance.

Source record: 67299

Greetings all,

DEM is currently in the process of putting together a redesigned 903 transverter which will not be available for some unspecified time. I, however, have a need for a 144-903 transverter for the January contest. Does anyone have anything excess to needs? I'd prefer it to have around 10 watts out, but less would be acceptable. More would also be a plus.

Source record: 67300
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For sale:

Realistic SP-150 speaker, the matching speaker for the classic DX-150 shortwave receiver. The brushed aluminum front panel is in very good shape with only a couple of TINY scratches. The paint on the cabinet shows some wear and some chipping, but is quite presentable. The original feet are in good shape. I've installed a new 6' cord and RCA plug. There are not many of these around any more, and the few that I've seen lately have been really scruffy. This one is NOT what you would consider to be "collector grade", but it's in good shape and would look fine sitting next to your DX-150. Asking $20.00 plus shipping.

5427. Simultaneous RIT and IF Shift in FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-19 16:12:59 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <3a3f8aa8$2$vtanpl$mr2ice@news.uga.edu>
Source record: 67303

Did somebody manage to get IF Shift and RIT to function simultaneously? When in RIT mode, one can press RIT button for a second and be put into IF Shift while retaining the RIT setting. However, on return to RIT, the IF Shift setting is reset.

The 300 Hz filter is really a 150 Hz filter, and it is 150 Hz down the transmit and DSP/CW frequencies. When using this fillter, I am calling everyone off, and cannot engage the DSP/CWbecaus ethen not much gets passed. One can IF shift the filter up by 150 Hz, but then RIT does not work. With such a narrow filter, RIT is really useful.

73,
Ignacy, NO9E

If anybody needs one -- I have some copies of the ICOM band chart that I
received after the 1999 Dayton Hamvention... (I had them sent to my school
and have some extra copies)

73s,
Carl - KC8KQL

Source record: 67314

Or the two batteries that maintain all the operating info may be going south. I had similar symptoms a couple of years ago on my 940. Kenwood provided pix of where the batteries needed to go and how to get to them (it's not hard) and told me where to get replacements (they're not "cheap"). Once I'd replaced the batteries everything was back to normal. The old ones died at about the 10 year point for my radio.

Tracy,

I bought a MAHA MH-800 speaker mike for my W32A but I have not been happy with it's performance after about 6 months or so. The receive audio has gotten a bit 'muddy'. Naturally, your experience might be different.

Bill,

Thanks for the input.

With so many products being sold under multiple company names, I am curious
if MAHA and Pryme HT mics are the same product.

Tracy, W7TRX

WANTED

A reasonably priced CRANK UP and TILT OVER TOWER at least 40 feet tall. Needs to be in good serviceable condition. Will buy out right or do some trading. I do NOT need a standard stacked tower; it must be crank up and tilt over.

Will pick up in the area of the Carolinas, GA, or TN. I am not looking for a fancy expensive tower, just one good enough to support a small beam or quad. If you have a rotor to go with it, let me know.

Many thanks for reading.

Hi,
I am looking for information on a 50/144/430 transverter I could hook up to
my Kenwood TS-570D.
I see the radio has the option to have one hooked up and even has the
digital readout for the 50/144/430
bands.
Does Kenwood sell such a thing? if not, who sells them? Price?
Would this work all modes?
fm repeaters?
Any information would be greatly appreciated!!

Thanks and happy holidays

The extra digit on the display is not a mod, Chris ... it's a built-in
available feature! That is, if you're referring to the 10 khz feature.

To get 10 hz resolution on the main display, press CLEAR while turning on
the power. To set it back to 100 hz resolution, do it again.

If you have the owner's manual, section 4-2-8 will have a list of functions
that can be toggled by pressing a button when you turn on the set.

I don't quite understand what you mean by "power up on SSB", however.

My company offers the SPM-900 Series of commercial-quality speaker-mikes. I received our initial shipment the day before I left for this year's Dayton HamFest - so I took a few with me to pass around. EVERYONE likes its "feel" and audio quality - transmit and receive.

A little pricey for the amateur market (they retail for about fifty bucks). But that's a lot less than the one you mentioned.

Ezat:

"Bang-for-the-buck" the TS-430S is a great deal. It's 100 watts, all mode, all bands with a transverter port, digital synthesized, very good sensitivity, etc. I've had 3 over the years and am using a TS-450S now as my primary rig.

Construction is medium grade. Chassis and covers are metal, but the boards are cheap phoenolic sometimes with bad thru-hole vias, especially in the power amplifier section. All are easily repairable and not too common.

Technically, other rigs have more elaborate design architectures, the results of which would probably be subtle to the casual amateur (IMD, dynamic range, synthesizer noise, etc.). My experience has shown that the more complex rigs have more to break in them, especially as time passes plus you may be paying for specs that you may not notice.

I think the TS-430S had about the right mix of simplicity vs function. Most sell for $400 or less. The Icom IC-735 sells for about $450 +/- and provides an excellent alternative with icom support (something that Kenwood has been lacking for the past couple of years).

See you on the air...
73,
Woody AK2F

Greetings...

Anyone have the pin out for the dc power on a ts-430s? Just got the rig, and am ordering a manual, but would like to use it now!!!.

Thanks...
Paul w4got

Why would you even need win95 software when the dos
versions work just fine in 95? The PP2 ver 5.5
is even free on a couple of ham sites (I forget where).

I don't know that there is any advantage to upgrading
an MBX that already has pactor. I would like to know
how to add more memory to mine though.

Hello,

Happy Hannukah, Merry Christmas, Season's Greetings
and a safe and Happy New Year to everyone.

I'm very interested in buying a cosmetically clean FTdx-401
with Heatkit monitor scope, keyer, paddles, and RTTY box
from an old ham who's been inactive for several years now.

Can you give me any tips about the rig or point me to resources on them
that I need to know about before I buy it in February 2001 ?

Thanks for reading this e-mail,

73, John <><

This is my own personal K2. Built with love, and time. All is mint, and tuned up using Spectragram.
Perfect in all respects! Eliminate the building time and have one of the finest rigs on the market, and have the capability to fix it yourself!
Includes the following options.
SSB option
160 meter option
Noise Blanker
Extra accessory box (for future projects, and options)
If interested, call me at 630-924-1600.

Timewave customer response is kind of strange. I sent them an Email on
a Saturday and had a reply Sunday night. I thought that was great.
The Emain gave me a contact to Email or call, a guy in charge of
repair. I sent him two Emails and after a couple of weeks he has not
responded.

5471. Mobil Radio in a Rodeo (Isuzu)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-20 22:13:45 UTC
From: Bruce Harper <bharper@vt.edu>
Message-ID: <20122000171345 2646%bharper@vt.edu>
Source record: 67249

I have a '97 Isuzu Rodeo. I have a Radio Shack HTX-242 2-meter rig that I would like to put into a more permanent mount (wedged between the console and passenger seat is OK but not perfect). Is there a good location _somewhere_ convenient where I can put this radio and still be able to reach some of the buttons and see the display? I haven't measured the cubbyhole above the shift levers, but that also seems like a tight location to work in without dismantling most of the dash. I also need a good electrical connection other than the [temporary] cigarette lighter plug I'm using now. On high-power transmit, the rig pulls just under 8 amps (according to the specs), so the circuit needs to have minimal load. I have poked around, but haven't found a good path through the firewall to reach the battery. I also discovered in the center console the wire lead for the optional side mirror defrost switch. Would this be adequate for a connection? (I've got to order that service manual!) Thanks.

Source record: 67251

Well, mine doesn't work at all under Win98.

I can talk to the PK232 using HyperTerminal just fine (although remembering all those commands is difficult).

When I install the DOS version of PC PakRatt 2 and start it from within a DOS WINDOW, I consistently get a "Link Failure". My guess is that it's trying to steal the interrupt vector for COM1 and Win98 is giving it some difficulty. Repeated attempts, at all baud rates, and both COM1 and COM2, always fails in the same manner.

If there's a way to make it work from a DOS WINDOW, it's eluding me. I don't consider booting to DOS a solution. I'm pretty sure I have the last DOS version AEA put out; I never did get any of the Win3.1 versions. Perhaps one of these will work in Win9x.

If the DOS version won't work in Win9x but the Win3.1 version will, I'll just have to find a copy somewhere. I'm not terribly happy with the replacement program that's being provided by Timewave.

I'd appreciate any other info or suggestions regarding this matter.

Source record: 67252

Bob,

If Hyperterm will talk to your PK-232, so will PKTerm '99. That's the way we debug problems to see if there are conflicts. You can download the demo mode version of Pkterm at http://www.cssincorp.com/pkterm. We offer 30 minutes free support with demo mode, to get you running. The demo can be turned into the full version, just by purchasing the serial number and activation key. FYI, we (CSS) own both the PakRatt DOS and PakRatt Windows source code.

Do you have your PK-232 at 8,n,1 or 7,e,1? Most of the time, problems are due to baud rate and parity. The suggested baud and parity with today's computers is 9600, 8,n,1.

BTW, spoke to John Douglas at Timewave about your query. It seems you have a spammed reply address and perhaps that's why you never got a response.

Best

Jim,

The PP2 5.5 is NOT a free product. It's a copyright product by CSS and Timewave and anyone who has a copy is running pirated software.

The TNC software market is so small, and has zero profit, I just don't understand why hams want to pirate our software.

A couple of the sites that had it we have already informed of the copyright. And we need the ham communities support to help us keep providing products for the TNC community.

Please let me know the sites if you remember them. We do reward people with discounted and free products when they help us find sites like this and let us know.

5475. WANTED IC-720 MANUAL & TUNING KNOB

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 00:04:01 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3A415701.985C2066@erols.com>
Source record: 67254

A couple of our local radio club members purchased, and reconditioned an ICOM IC-720A for a local teenage ham for Christmas. However, they need the Operating Manual and if at all possible, a cleaner main tuning knob. Any assistance appreciated. Of course we will pay shipping and any reasonable price. Thanks. 73 Murray, K3BEQ

I reside in Maryland near WashDC, however out of town shipping ok.

5477. Re: ICOM IC-2-sra

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 00:18:05 UTC
From: Eddie Bryant N4UMJ <N4UMJ@carolina.rr.com>
Message-ID: <1%b06.87628$4K4.15148622@typhoon.southeast.rr.com>
Source record: 67256

-The ICOM W2A and the 2SRA are both fine radios when they
are working. They share many of the same circuitry and therefore
commonly fail with similar problems. When they die the most
common cause is the voltage regulator. I have seen many reports
of this and people generally get rid of them. I have heard ICOM
will go into the radio and modify it with upgraded components to
fix and prevent this in the future. Did you get ICOM to try this?

- The BC-72 charger is trouble from the start.
Not only does it put out RF hash all over the HF frequencies it is
known to fail and when it does it will most likely take your radio
out with it. Schematics are hard to come by on this unit and it
would be best not repairing this charger and going with a Maha
or better replacement.

- If there are users out there with BC-72 still working I
would advise them to charge the battery by itself and not leave
the transceiver attached to it. I am fairly certain this is what caused
the sudden failure of my W2A

- I am speaking from experience here because I had my W2A fail
and this was shortly after starting to use a new BC-72 charger I
acquired. I dove into the repair on the W2A and discovered that
radio is very difficult to work on. The regulator is a combination
surface mount and through the PC board mount for heat sink
purposes I suppose. Needless to say removal of the old regulator
was unsuccessful. I had another W2A that I had gotten cheap
along with another BC-72 charger. I was going to use them for
parts. Both the radio and the charger were beyond repair.
The parts charger had several fried components and smelled real
bad and the scrap W2A was completely dead. Two bad radios here
to make one good one did not work !

- My choice was to find a replacement W2A on e-bay that was
working. I could have taken the ICOM repair route with the other
two W2A's but decided that finding an ICOM W2A that was
already working would be a better choice. I still have the RFpower
module cards and can use them in the future if they fail. This is
the only thing I can say that is service friendly on these particular
ICOM radios.

- I just sold my older 2SRA on e-bay and it worked well for the
8 years that I owned it. The only problem I had with it was the
antenna jack worked loose from the PC board and I had to resolder
it.

-On repairing your broken function problem I would say that most
likely you have a bad flex cable. The W2A and the 2SRA are full of
them. I think the best way to deal with removal and replacement of
these would be a soldering iron with a long bar attachment so you
could desolder all the connections at once. I am sure ICOM has all
of these specialized tools and is why they can justify the high hourly
labor rate for repair. You also might be able to replace the bad ribbon
connection with a hard wire if this is indeed what is bad.

- I must say this was a learning experience and I still say the W2A and
the 2SRA are fine radios when they are working. They really had a lot
of features for radios of its time. Nice frequency coverage too. I had
many accessories for the W2A so it just made sense for me to find
another working unit.
I have the newer W32 without the function key and still find it
unnatural to use. I guess I got used to the function key being there
on the W2A.

- If you need a schematic and service manual for the 2SRA check the
following:

http://www.w7fg.com/

Good Luck,
Eddie Bryant

I got one mid 80's when they were early on the market, used it for several years, and since that time have owned a couple others acquired in trades. All were very good rigs and performed very well indeed. Be aware that they are slightly limited in areas such as memory channels having 10 instead of the usual 100 today, they have no direct frequency entry keypad, and if the memory backup lithium battery which also holds the rigs "brains" has not yet been replaced, you should have thats done soon. As I recall, if it isn't done before the battery expires the radio must be sent to a service center for reprogramming. Overall it is a very good piece of equipment for the cost.

Dick

The Kenwood 430 does not die if the battery does. You will loose the
memories and every time it is powered up it will come up at 14.000.0 mHz.
That's it. No catatrosphic happenings...

Hi All,

I am looking for an older dualband or 70cm monoband mobile for use in a
second car. Some like a FT5100, FT7400 or one of the Alinco or ADI mobiles.

Let me know what you have!

I'd have to look thru old qst's to be sure, but early 60's seems about
right. Late 50's at the oldest, but 61-65 seems closer to me offhand. MK

ERRRR....

Since when is TEXT **NOT** ASCII??? Text IS represented by 7 bits of the ASCII code. The graphics characters are formed with the addition of the 8th bit. But...BOTH ARE ASCII!!

I think you perhaps need to get a clue as well.

By the way, why do you keep change your address from "megabits" to "negabits"??? To confuse those who put you in their kill file?

Isn't it silly that hams are told by Kenwood that you need to use
their qualified service personnel just to replace a battery?? Not to
mention that Kenwood wants an inflated price for their exact
replacement part battery, should you (gasp) try to do it yourself...

Well, Radio Shack sells a 3V lithium battery with a matching battery
holder that wired very nicely into my Kenwood TS-50. Take that
Kenwood...

>As I recall, if it isn't done before the battery expires the radio
>must be sent to a service center for reprogramming.

What a ridiculous design. Probably good for Kenwood profits though...

5499. Icom 2400A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 05:16:37 UTC
From: dmccord@usol.com
Message-ID: <3a418fe9.9337959@news.usol.com>
Source record: 67278

I have am Icom 2400A Dualband VHF/UHF Radio I purchased on eBay. It works very well but I do not have a manual. This radio can transmit on one band and receive on the other at the same time.

I am wondering if this radio has a Crossband Repeate function build in? If So how do I use it? If Not does anyone have any plans on how something external to make it do crossband repeate?

Thanks for any help

Del KA8OCN

5500. Icom 735

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 05:24:38 UTC
From: dmccord@usol.com
Message-ID: <3a41924b.9948191@news.usol.com>
Source record: 67279

I have a Icom 735 HF radio and I like using PSK31 with this rig.
For 80 meters I use a inverted V and a tuner so the rig sees a good
swr. When I operate 80 meters using PSK31 I only run about 25 watts
and after about 2-3 min of transmitting the rig starts pulling a LOT
of current. Goes from the normal 7-10 amps at that power output to 20+
amps and the output power drops to almost nothing.

If anyone knows what could be the problem please pass it along!

Thanks
Del KA8OCN

I have a R8 that is less than 6 months old and I am having problems witht he antenna also. It was working Great and then all of a sudden its like having a dummy load on the end of the coax!

I checked the coax (Which is also new) and Its not shorted and gives me a perfect SWR when I connect a dummy load out there on the end of the coax. Cushcraft (After a bunch of phone tag) had me send them the matching box back to them, they tested it and returned it saying its fine. I used to get better than a 2 on every band with out my tuner now I get over a 8 swr and I can receive better if I connect the coax to my dogs collar!

I spend over 400$ on that antenna, its the LAST $$$$ Cushcraft will ever get from me!

Worked great, Looks Great, Does not last
I can not afford almost 100$ a month for an antenna!

THis is a pretty good example of what I call an unfair attack. By your own words, the antenna was working fine when you first used it, and had a sudden change to poor performance. Logic tells us that something changed in the hook-up at your location, and did so abruptly. The fault can be found, and probably with only simple equipment. Why blaim the R8 when it was delivered in working order?

You say you have checked the Coax, and CushCraft has checked the box. Why did you stop there, and blaim them? There is more to the system than that.It is apparent that something changed at your location- maybe a 'hit' or a loose connection?

just my slant on it. Bill-W4BSG

WANTED

A reasonably priced CRANK UP and TILT OVER TOWER at least 40 feet tall. Needs to be in good serviceable condition. Will buy out right or do some trading.

I do NOT need a standard stacked tower; it must be crank up AND pedestal tilt over.

Will pick up in the area of the Carolinas, GA, or TN. I am not looking for a fancy expensive tower, just one good enough to support a small beam or quad.

If you have a rotor to go with it, let me know.

Many thanks for reading.

Happy Holidays

Unfortunately, if the coax was developing problems, it would become more lossy and SWR readings would be entirely useless. You need to measure the power being delivered to the far end of the coax cable to make this determination. You can make a fairly decent microwave dummy load with several hundred feet of lossy cable.

Pete

5510. Re: YAESU FTdx-401 - any tips or resources I need before I buy one ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 15:22:07 UTC

Source record: 67288

John, I have and have had some of the FTDX series (401,401B,560) tranceivers. When there working there kinda neat to use. Lots of power, 1Kc read out, xtal calb is every 100 or 25Khz etc. If the radio your looking at is a good worker, that is if it has good output
on each band end to end recieves as well (good sensitivity on 15 and 10 meters) and if the VFO tracks at least 1 Khz for end to end, it's a good one and probably worth it. But
the ones I have had all had problems besides bad finals. The coils crack is there forms, replacing components in some cases is not easy, line up is a little confusing in some places. But the 401B is one good looking radio!

I hope your dog is not wearing the collar when you attach the coax.

Source record: 67199

Hi:

If everything was working fine, and then
al of a sudden, your performace dropped,
I would suspect your transmission line
(coax) first.

(providing your raido is OK)

One good way of making sure your
Coax is AOK, is to first measure the
input power to the cable. A bird or
suitable inline wattmetter is ideal for
this purpose. Then, mark down the readings, then measure the output at
the END of the cable into suitable Dummyload. (not your dogs coller).

If you see 80-100 % of the availible power
still there, your Coax should be AOK. I have found many times the COAX will
turn
into a good dummy load over time. And it
too will have no refective readings as the
Coax assorbs the RF before the meter can read it

Or if you are short on Test Equipment, Replace the Coax and insure the
connectors are installed properly. If you find after words your antenna is bad
/ poor, replacing the Cable is not a bad idea if its
3-4 years old.

Other than a Major Antenna problem, clean off
all the corosion, and spray it with a light
coat of Cramlion.

Hope that may help

5523. Wanted: Kenwood TS-850SAT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 19:33:46 UTC
From: k5dh@raytheon.com
Message-ID: <uWs06.4$j6.250@dfw-service2.ext.raytheon.com>
Source record: 67201
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I'm looking to buy a Kenwood TS-850SAT. Here are my conditions
for purchase:
- rig must be in good shape (doesn't have to be "pristine")
- rig must be fully working and with NO damage/repair history
- rig must have the internal antenna tuner
- rig must have been owned ONLY by non-smokers since new!!!
- the more filters it has, the better (especially CW filters)
- I don't care about having the DRU, DSP-100, VS-2, a fancy
desk mic (I have an MC-80), or SP-31 (no room for it)
- mods are okay, as long as they're DOCUMENTED and useful
- MUST come with the ORIGINAL manual, and I'd really prefer
that the original box and packing are included as well
- service manual would be nice, but not mandatory

I am a serious buyer, I'm not just "trolling". I've done my
homework, and I know what 850's are selling for. I am ready
to immediately send payment, either by Postal money order or
PayPal, when I find the right deal.

Whether you are celebrating Christmas, Hanukkah, Kwanzaa, or
any other sacred event, I offer my warmest wishes for a great
Holiday season and a prosperous year in 2001!

73,
Dean, K5DH

5526. FS Great Deal on Emergency Generators

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-21 20:58:27 UTC
From: Bill Fleming <n1hko@arrl.net>
Message-ID: <ljr44tcaibmcum67v7f9bsh1vimuf83s5l@4ax.com>
Source record: 67204

I know the timing isn't the best. But, I thought this was such a
great deal for emergency power etc. So, here goes...

Now available for a short time and only $500.00. Generator - 5000 W -
New with original manufacturer warranty. These units list new at
$899.00. Manufacturer lists "factory serviced" model for $699.00.
These are new, never used, never run, not demo, not refurb, nothing
like that - just units that need to be sold! At last count, there were
quite a few still available.

-- SPECS FOLLOW --

Rated Watts - 5000
Surge Watts - 6000
Volts - 120/240
Amps - 41.7/20.8
Engine - B&S Vanguard OHV
HP - 9.0
Fuel - Gas
Gal. - 7.0
Start - Pull
Run Time (full load) - 6.8 hours
Run Time (50% load) - 12.0 hours
Noise (full load) - 82.5db
Warranty Alternator/Engine - 3/2
Manufacturer - Campbell Hausfeld

See the following URL for picture and comparative pricing:
http://tsc.chpower.com/CHStore/Hot_Buys/hotquery.asp?hotbuytype=Factory-Serviced&hotbuycat
egory=Generators

If you have questions or are interested, contact me directly. This is
a private sale. No refunds or returns. All sales are final. Units
will have to be picked up in Manchester, NH or freight pre-paid. All
sales first come, first served. No guaranty on availability.

i need to construct a transmitter and receiver that can operate a small motor. the motor needs only a constant voltage so i thought some type of cw transmitter would be in order. could someone point me in the right direction as to how to do this? the transmitter doesnt need the greatest range (about 1/4 mile), but the ability to tune both the transmitter and receiver would be nice but not necessary. the receiver does need to be rather small and i would like to use an antenna like that in a garage door receiver, but havent been able to locate an information source on these coiled antennas. any help would be greatly appreciated.

thanks much

Jeff

> The Kenwood 430 does not die if the battery does. You will loose the
> memories and every time it is powered up it will come up at 14.000.0 mHz.
> That's it. No catatrosphic happenings...

Which models do die from the battery? My friend owns a TS680S, will that suffer and is it possible to replace the battery on that yourself?

Many thanks for the advice in advance.

Regards

Bartek

PS Thank god for these newsgroups, if I didn't read the posts here then we would have probably not known about the possible solution and Kenwood would have gotten even richer still!

>

Lets do a correction on part of that...The TS430 Does NOT lose its
"brains"
when the lithium battery quits, just its memory programming which then
will need to be reentered each time the rig is powered up. That's user
memories only. (it was an ICOM that I had that lost it all).

Dick

I must be a real ham then, since I don't use them. But some people do
and no description of a rig is complete without them.

The traps could be the problem here...I've had them blow up on Cushcraft antennas before when they get wet with even low power. Is the SWR the same on all bands? If it's not, take the traps apart and look for burned insulators, corroded connections, moisture or insect nests. I would also check for corrosion where the mast sections slide into each other. Clean those areas with a wire brush, and coat with "NoAlox" before reassembling. If it's the same on all bands, it's the coax connectors, or the tuning-box connections.

I am using version 1.0 dated 12/15/99.

Does anyone know where I can get a later version or any patches
for the sw itself. I am having problems with bad file saves and
I know the system is ok.

Please email direct: josttech@mediaone.net

Thanks in advance, John w1hzh

This thread is about the LACK of Support From Cushcraft, With a antenna that is less than 6 months old I received the same fine customer service that many other Hams have claimed here.

I want to thank the person with the idea of a watt meter at teh antenna end of the coax into a dummy load, I had not thought of that and it sounds like a good idea.

I was told by Tech Support at Cushcraft the the ONLY thing that can go wrong with the R8 Vertical is the Black box (Matching network). The antenna is Bran new so it has not coroded yet, I checked all coils with at least a Volt Ohm meter and they have a connection.

The antenna is in my pole barn awating the weather and time that will allow me to play with it some more. Here in Michigan we have had over 2 feet of snow in the last week. I spend more time with the snow blower than I do with my Wife!

Could I have another problem, I am sure I could, I do not pretend to be an expert on antennas and feedline. So I spend the money and purchased an antenna from experts. I will say there could be some information on there website about trouble shooting antennas. There is nothing that I have found. The simple trick of the watt meter at the antennas end of the coax into a dummy load. In fact I am already working on purchasing 100 feet of New coax to run out the door and just use to test and compart to eliminate the coax from the problem.

And about the antenna working when it was "Out Of The Box" Fine but if I buy a car and it has a warrantee I expect it to work throughout the Warrantee period and beyond.

Again just to clarify this thread was about the lack of customer support at Cushcraft, Them supplier me Customer, They are suppost to help me....

I have just purchased one of the great old Kenwood TS-820S rigs--but without an instruction manual. I've ordered one, but it will be some time before it arrives, and I would like to put the radio on the air during the holidays. If someone who has (or remembers) an 820 could drop me a quick line on how to tune the rig up, I would surely appreciate it. Please respond directly to jwstan@usa.net. Many thanks!

Hello Mike,
Mine did the same thing.
Seems to be that its a known thing with the aging 930.
Sent it to the local repairman who fixed it -easily-
and also fine-aligned the rig for less than $60.
It has worked -fine- since then.
Excellent receiver!

Merry Christmas.
73 John <><

p.s. Will check out the ALC thing.
Also, have you checked out the PIEXX site for 930 upgrades?

I rode my Uncle Sam's great grey yachts as a field engineer in a previous life. One had a surface search radar that had extremely poor range. Turned out that some swab had replaced a section of waveguide with a 2x4 halfway up the mast. As luck'd have it the SWR and all looked ok .....

Radio Shack is indeed selling them cheap at $599 plus $32 shipping (!). I just bought one. They have nine left, via their website. The model they're selling is the version that puts out 100 watts on hf and 10 watts on 6 mtrs. In my opinion, for the money it's the best mobile radio available new right now. There are probably better radios, but for double the price. Best 73, K7JY.

The Dx-70T "D" iscontinued model being liquidated through Radio shack mail order is the version with only 10W on 6 meters. It's a good radio, but at about $640 delivered you should think seriously about calling a regular Alinco Dealer & getting the current model DX-70TH, with a full 100 watts on 6M, for only about $90 bucks more delivered.....
Next month Radio Shack will be liquidating the DJ-195T handheld (replaced with the 196) for $99.99 + shppg.....the catch.....The "D" Radio shack versions Won't come with the 5W battery or the charger included with the regular Alinco units, just a drycell case. The new 196T with 5W batt & charger & upgraded keypad will only cost someone about $25-35 more, a fraction of the cost of that batt & charger if purchased seperate.....

This used to be a big problem for me too. There are
some com port issues I have noted. One is the link
failure crash at boot up.

Link reliability can be much improved by tying signal
ground to frame ground (db-25 7,1)in the pk-232
(or cable shell) so that bias on pk-232 boot up won't
go astray and lock it up.

Another is the inability of AUTOBAUD to find the proper
baud rate because the PK-232 defaults to 7e0, while
PP2 defaults to 8n1(Major faux pas). AUTOBAUD won't
even work with pp2 because the program crashes if the
link doesn't match from the start.

Rick mentions using another terminal program to configure
the pk232 link to the known PP2 configuration.

I am using a 486dx 75 laptop in the shack with win95
installed and 2400bd 8n1 link. In 95 it always comes
up in full screen mode first, but works fine in a
window when configured for background operation. I
always boot to dos for a faster load (bootgui=0) and
either run batch files or type win for full win95
operation.

Jim, ac6tk

I have a NIB Orbicomm Model # KX-7101 Data Communicator with all hardware,
manual and GPS antenna (magnetic)
Follow link for detailed info. Unit sells for $895.00 and is BRAND
NEW/UNUSED
Photo upon request

http://www.panasonic.com/industrial_oem/satcom/products/kxg7100.html

Quick specs:

GPS - 8 channel (1575.42MHz), RX sensitivity -130dBm, 2 min aquisition time
Unit itself:
12-24VDC powered
Sat transmit - RS232C up to 9600bps
I/O - 2 digital inputs / outputs, 2 analog inputs
Freqs: Uplink- 148-150MHz(2400bps)
downlink 137-138MHz(4800bps)

I will accept reasonable offers - I need a pentium laptop, will consider
trades..

Yep - That's rite!

I wanna buy you cruddy CONAR Receiver model 500.

Come on, get your butt off the couch and get your nose into the junkbox in the garage and dig it out.

It's been waiting there for 35 years since you last fired it up as a Novice. You're not going to do anything with it during the next 35 years.

So sell it to me, so I can put it in my junkbox in the garage.

email me if you found it.

A short Novel, by Kepler 'The sinking Ship'

ao-40 is like a ship that has capsized and is upside down in cold murky water.
Its supporters & contributors cling to the sides in vain hopes of rescue, but
as time go by more and more of them with failing strength slide silently into
the depths of the cold murky water until nothing is left. Only a few stale
keplerian element sets remain as a reminder of the tragedy.

the end

I almost got a sense of his being pleased that AO-40 is in trouble. I am as concerned and disappointed as the next guy, but I wouldn't find any satisfaction in posting a message such as he did. At this point, all I can do is hope for the best; I generally save prayer for bigger issues.

Don't worry, be happy.

Eventually, somebody will collect this satellite and return it to earth or
repair it.
NASA went and repaired the Hubble Space Telescope didn't they?
It will either get in somebodies way or space flight will become so
commonplace that this satellite will be retrieved.
It's just a mattter of time.

Umm well, I doubt it.. because the failure took place as the motors
were being manipulated for orbital configuration. However, on the bright
side the thing is in one piece and I'd say the on board computer may
have crashed or worse is dead brained. Can they recover.. I sure as hell
hope so as I contributed money to the project and imagine
the pain the developmental team is going to feel if this thing is a dead
doggie..

Thanks for all the help and ideas. I figured out the problem. It was
RF getting into the rig via the DC Power connection.
I tried the battery trick a few people had told me about and that did
not work so I had one large Ferrite Beed and I wrapped three loops of
the DC power cord in them as tight as I could and it worked!
I talked to a guy for over a hour in Traverse City two nights ago and
no problem at all. I can't beleive it was that simple!

Thanks again for all the help!

Don't get your hopes too high. If ET hasn't called yet something quite dire has happened which may not be fixable even with a rebooting. They do-not know if the bird is even hearing ground command sigs. Now, that's really operating in the dark and hoping for Santa Clause to fix whatever is wrong. Don't get me wrong I'm depressed if this sat is dead, because we shall not see another in many many many years!

Source record: 67164

This unit can be seen here
http://breazile.com/icom/
I have for sale a first class UHF repeater system. all equipment is
rack mountable. It would probably cost too much to ship the rack.
the system is as follows

Icom RP4020 repeater. no need for crystals. just use the dip switches
and set it to your frquency. runs on 110 volt or 12 volt

Cat 1000 controller with digital voice recorder and rach mount
enclosure can be programmed via phone line. with onboard modem

Motorola T1500 duplexers

pl encode decode it will do it all. this is a very nice system

I have over 4 thousand invested in this unit. let me know your best
offer. we can split the shipping cost

this unit is on the air right now and working great. the only thing
you will need is an antenna and coax.

5594. PR: Pacterm '98 and PkTerm '99 1.5 Preview Released

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-23 05:19:35 UTC
From: Rick Ruhl <ricker@cssincorp.com>
Message-ID: <wGW06.11803$Y53.154700@e420r-atl2.usenetserver.com>
Source record: 67167

Press Release

PacTerm '98 and PKTerm '99 version 1.5 Preview released
Muscle Shoals, Alabama. December 22, 2000: Creative Services Software has announced that they have released PacTerm '98 and PKTerm '99 version 1.5 in Preview. This latest update supports the hot new digital mode PSK-31 as well as the AGW Packet Engine. This is the first product to integrate DSP sound card technology in conjunction with TNC technology. This release is a FREE upgrade for owners of the current product and users who purchase the product today.

The popular TNC program, written in C++, has been available since November 1997.

Company President Rick Ruhl, W4PC said, " We decided to release version 1.5 in Preview to allow the ham community start using PSK-31 with their TNCs, and to get input from them on challenges they find with the program. A Preview version of a product is a product that has gone through internal testing and some beta testing, but may still have some outstanding issues. Hams are pros when it comes to finding issues in a software product, and we welcome their findings".

New enhancements for version 1.5 include:

- PSK-31 sound card support, using the TNC's keying circuit or the TNC's serial port for keying the radio with RTS or DTR, saving a serial port for other functions!!!
- AGW Packet Engine for sound card packet support
- Voice DX spot announcements
- Support for 2 simultaneous TNCs (1 multimode and 1 packet)
- Point and click settings for TNC commands for startup
- Startup/Shutdown commands for each call sign
- 10 mode-specific macros in addition to 10 global macros for each call sign
- CQ, ID and QRT macros
- Pactor connected station call sign display in title bar
- 4K chat and macro buffer
- Support for Satellite Telemetry with the DSP-1232 and DSP-2232
- YAPP and PC-PakRatt binary file transfer support in Pactor or GTOR

And includes supports that the previous versions had:
• Macro Variables {CALL}, {UTCTIME} etc
• ASCII transfer for UNPROTO mode in Packet
• Multiple file select for ASCII transfers in HF
• Abort ASCII file transfer now available from HF
• Interoperability with Log Windows, DX4Win 4.06 and Logic 5 logging programs

• Basic radio control interface
• Added FIG/NUMS menu option in PKTerm
• Additional commands specific for the PK-900 and DSP-2232 in PKTerm
• Multi-stream multi-port support. Up to 26 streams per packet port, each in a different window
• Supports G-TOR• and G-TOR Monitoring (Kantronics)
• Switch between streams with a click of the mouse
• Text and binary file transfers with YAPP
• Supports COM1 to COM35 (including USB serial converters)
• User defined colors and fonts!
• User defined macros!
• Separate window for non packet HF modes, from CW through NavTex at the click of a mouse
• Save QSOs to a file that is compatible with Microsoft Word
• Multiple monitor windows allow you to watch traffic on each radio port

The program runs under Windows 95/98/Me and Windows NT/2000. It is a true 32-bit Windows application, designed using the Windows Style Guidelines available from Microsoft.

PacTerm '98 and PKTerm '99 are $79.95. They are available directly from Creative Services Software or your favorite dealer. You can also download the program in demo mode from the CSS web site.

Creative Services Software is at http://www.cssincorp.com.

Windows, Windows 95, Windows 98, Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

Has anyone experienced receive audio receive problems with a Yaesu 8100? I get intermittently terrible feedback both on simplex and on local repeaters. Also having some transmit problems. The first second or 2 of transmit is barely readable and then it kicks in full strength. Almost makes me think there's something loose in the circuitry.

Pete/AL7RH

Good radio. Get the VFO-230 if you want a rock solid vfo with a few
memories. When you tune up, do the final tune in the cw mode with full
power. If you tune only in the tune mode, you will only be at about 1/2
power and you will be underloaded for full power use. When fully loaded
you should show about 210-230 ma IP current. Varies a bit with voltage
etc. Not critical. I use a TS-830s here quite a bit. It's a 530 on
steroids. MK

What kind of antenna? With any normal complete antenna, you don't need an rf ground in the shack. I wouldn't bother with it. It will likely cause more problems than it cures. Just run a good antenna with proper decoupling from the antenna to the feedline. IE: dipole? use a balun. MK

Please allow me to be the Devil's advocate for one posting here. And
let me qualify what I am about to say as someone who is still hopeful
that AO-40 has not run out of options.

I think the 'Sinking Ship' story was more of an observation about what
the author has been reading on this news group rather than his
pessimistic attitude to the bird. His observation is that others on
this news group might be a little quick to abandon ship.

There now, no need to arm bears after all 8-)

5615. Need plans for Crystal Radio that will drive a speaker

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-23 20:23:49 UTC
From: "Pez D. Spencer" <no@spam.com>
Message-ID: <3A4509D4.9D82F719@spam.com>
Source record: 67191

Hi,

I'm looking for plans or any related info (even a kit) for
a crystal radio that will drive a loud speaker. I've seen
this done in the past, so I know it's possible. Any
info on this subject will be of great help.

Thanks for answering here.

Regards,

Pez

Drake TR-7 Amateur Radio Transceiver

This Drake TR-7 transceiver (serial no. 2918) covers the amateur radio bands from 160 to 10 meters including the WARC bands. The radio has continuous receiver coverage from 1.5 to 30 MHz, at least (I haven't checked to see if it will receive below 1.5 MHz). I don't think it has the AUX-7 board installed, however it has been modified to transmit on the WARC bands using the up and down buttons. The DR-7 digital display board ,NB-7 noise blanker and SSB filter are installed. The radio has been modified (resistor) for wide band AM reception.

The radio is an early model with the dull black finish. On an appearance scale of scale of 1 to 10, I would rate it a 9, since there are some tiny scratches on the front of the main tuning knob and the top of the cabinet, under close inspection, has some faint marks from the feet of a piece of equipment that was apparently placed on the cabinet. Electrically, as far as I can tell, it works perfectly. In November 1998, the unit was returned to the R. L. Drake Co. and the final transistors were replaced (a copy of the invoice will be included with the TR-7). The radio puts out full rated power of 150 watts. Since 1998 I have used the radio primarily as a receiver. I would estimate that the new final transistors have less than 3 hours of use.

The radio comes with a partial operating manual and a copy of the detailed service manual.

$490.00 plus shipping and insurance

Thanks,

Rex,K2AM

This unit is very sensitive to loose connections. Even a PL-259 not tightly snugged down will cause a variety of probs. Make sure everything is very tight. Also very sens to fluctuations in input volts. Mine starts acting funny just below 12 volts. Output, especially on 440 drops drastically as you go below 13.4 or .5 volts. And while Yaesu doesn't want to admit it, there are a variety of probs due to inadequate APC grounding. They even gave me a mod for it. It helps, tinny sounding TX , alternator whine and others. If you need this mod. e mail me. Go to the egroups section for the FT-8100 and read the messages there. I put a big one on there that may be helpful to you.

you don't need a rf ground????? come on.... sure why don't you blow out phones /TV sets computers in the whole complex..

If its the last option and you cant think or make anything work.. Get a MFJ.. artificial ground. I hear they work ok for your type of problem.

5626. HELP: PacComm Spirit 2 PAD's & GRAPES 56KB RF modem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-23 23:43:33 UTC
From: whrudey@mdsi.bc.ca
Message-ID: <923db5smd1@nnrp1.deja.com>
Source record: 67102

Hi,

Does anybody know of the specific cable wiring interface between the PacComm Spirit 2 PAD's radio port (DIN-8) and the GRAPES (WA4DSY) 56KB RF modem's RS-422 port?

I just purchased a couple of these units but PacComm did not include any information (even though they manufacture both units and market them together as a compatible configuration).

Any info would be greatly appreciated!

...Will

I saw the IC-706 MK G for $ 899 and the Icom 746 for $ 1245 Both Include Shipping at www.kjielectronics.com

I don't work in teh ham business but was doing some price hunting. I found that some dealers have better prices on some stuff but not on everything. I suggest shopping around.

Pez .... I build a crystal set with a carborumdum crystal in series with
a battery (1 1/2 volts) years ago. It was in one of the Modern Radio
Lab publications. It did drive a speaker. Merry Christmas Tom KI3R

That would depend on the length of the tail and how the dog holds it, down,
straight back or up. A husky with a curly tail ought to give you circular
polarization, great for sat. work. ;<)

I have had a Cushcraft ground mount HF in place for six years now. It still works flawlessley on all bands, including six meters and, surprisingly, two meters!
When I put this antenna together I did stray from their instruction a bit. I liberally coated all the contact points with a compound called De-Ox. This eleminates oxidation due to things such as acid rain and other elements.
I do check the antenna every two years with an MFJ antenna analyzer and I have had to readjust a couple of the coils...usuallly the 17 meter one. This antenna does flex in the wind and despite making all the connections tight, they do tend to "migrate" a little.
Suggestion: once you get the antenna set, mark the location of the coil clamps with a number two lead pencil. You can then loosen the clamps and slide them back into position and the markings seem to stay in place despite rain, snow, etc.
The only gripe I have with Cushcraft is that they charged me sixteen dollars for the six meter add-on. This consisted of nothing but two little aluminum clamps and a length of coated wire. That was kind of a rip-off and I let them know. They did not respond.
One last suggestion. Install radials under the antenna! This is important. I buried a couple dozen lengths of #12 coated household wire about two or three inches under the soil. These reflectors need not be of any specific length, though some purists may argue that point. It is important that you do this for the antenna to work well.

Name and call not given.

Yeah, like NASA.. but you know the big snafu , the Mars Surveyer, that
blew up before reaching Mars and cost the tax payers a billion.. used
all "taylor made circuits". The most successful little mutt, the little
rover used standard IC's..
Just goes to show yeah, it doesn't need to cost to be well designed.
But, if the AMSAT crew did not put a back-up CPU and beacon Transmitters
on board.. that was a Forest Gummper.
Yeah.. I know about the weight restrictions.. but what the hell does all
the bells and horns do if the booby bird.. craps the bed before its
first QSO?

I had a 430 new that exhibited a common problem, I was told. Well, when the rig got warm, the synthesizer would unlock, rendering the radio unusable until it cooled down. I sent it off for warranty service and the problem was corrected.

To date, no manned orbital flight has been in the region of geosynchronous orbital altitudes, so there's a long way to go for a retrieval/repair (ala Hubble) to take place. I believe that there is a radiation risk to humans in certain orbital domains in that region as well.

Yes, I am quite aware that the satellite is "way out there" as you put it.HST's repair proved that things can be retrieved in space. There is a lot of "Space Junk" floating around in orbit. Eventually it will get in somebody's way, or someone will collect it as a "Space Antique". I don't know how soon, but unless AO-40's orbit significantly decays, someday it will be retrieved if only as an historical object by our great-grandchildren.. But IMO I don't think it will be that long.

I would like to swap even up for a 6m module for a yaesu FT726R
I have a satellite board and the 430-440mhz module for FT726R

The 6m must be in excellent shape no need for alignment as these
I have are aligned and ready to install!

Please contact me with what you have I may have other things you may
want to swap for as well for the 6m module instaed.

Years I did a cost analysis of what it takes to ship an empty box. It
was less the actual postage charges, but included taking the order
and all the paper work.

It was about $18.

I suppose if you throw in the time to answer complaints or questions
from cheap whining hams, the cost would be even higher.

5648. NEED HELP! on K1FO vhf/uhf amp info

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-24 16:08:42 UTC
From: Bob Dodson <wb5apd@alltel.net>
Message-ID: <3A461F8A.1D6B5486@alltel.net>
Source record: 67124

Need your help bad. I need to know what material is used in a K1FO
vhf/uhf
amp for the plate line. Type of material and thickness etc. The K1FO amp
plans are in one of the ARRL UHF Experimenters handbooks.
Need to know real bad type of material, thickness etc etc. Also
if you
can find this information on the K1FO 432 version vs the 2m or 220mhz
version would be even better. Mainly need to know what the plate line is
made from,
don't need the diminsions.
Want to replace this aluminum plate line with a material that has
better thermal
stability. Also any ideas on what material is best for a strip line amp
(plate line)
would be interested in your thoughts on this. Mainly trying to fix
thermal problems.
I have tried a differential capacitor but think my main problem is the
aluminum
material used in this plate line.
Thought maybe if I went with the exact material used in a K1FO amp
would solve my problem.
Merry Christmas and thanks for any help in advance.

Hubble's orbit, which is very nearly circular to begin with, was lowered
to about 250 miles each time it was worked on. This would then presume
that we have power and control over AO40, which we do not (at the
present time). The chances of retrieval of a $4M amateur spacecraft by
a $100M shuttle flight are somewhere between slim and none. Physics and
economics just don't see that one in the cards.

The only posibility would seem to be if it could be done as a minor
side project piggybacked onto another mission. That makes the odds even
slimmer that circumstances would fortuituously team up to make that
possible at all.

I guess the easiest thing in the world to do, is to set back and do nothing. This makes sure you can never screw up anything, while ridiculing any attempt by others that may go less than perfect. This is the same group that finds fault in the way we live our lives, worship our God, abhor sexual deviance, etc. and etc.

Had these folks had their way at Kitty Hawk, we would all be taking the train. I for one am sick of the nay sayers until they get off their lazy butts and accomplish anything, however slight. Until then shut up. The rule needs to be "No contribution, No comments"

Merry Christmas to Men of good will.

Yes, but Fred...if you want to get a close-up view of how "Momentum" and desire to keep the project on schedule get in the way of doing it right, read the late physicist Richard P Feynman's report on the investigation of the Space Shuttle Challenger disaster.

Feynman was a member of the special commission which did the investigation and if not for him and his firm insistence on *doing it right and fully reporting and disclosing ALL the facts* we'd still not know what caused the disaster. It woulod have been swept under a carpet of doubletalk and obfuscation.

I found his report in the book "The Pleasure of Finding Things Out",The Best Short Works of Richard P. Feynman, by the author, as "Richard P. Feynman's Minority Report to the Space Shuttle Challenger Disaster Inquiry", chapter 7 page 151. Helix Books, Perseus Books Group. ISBN 0-7382-0349-1 http://www.perseuspublishing.com.

Note that his was the "Minority Report" which contained exactly what he found to be the facts. He wouldn't have done it any other way.
Makes you wonder about some of the many spin doctors operating here on rrap and so many other areas today.

Dick

Hi,

I used to own a Kenwood TS940SAT and own the Heil boom mic/headphones
and will shortly be getting the Yaesu FT1000MP.

Could someone please let me know what the pinouts are (ie what
changes I will have to do when I replace the plugs and get the
soldering iron out !!!)

Best wishes for Christmas/New Year to everyone on the list.

> phones /TV sets computers in the whole complex..

What in the world makes you think that will happen? If you have a properly decoupled antenna there will be no rf in the "complex", unless it is due to fundamental overload. RF grounding does not cure common mode problems. I don't use an RF ground, and haven't in a long time. Don't need it. Tell you what I'll do. You can come over here and I'll crank my henry up to legal limit power, and start calling cq, and I'll let you watch my tv, use my phone, and even get on the internet from my puter. Then you can tell me about the rf problems I don't have. Also a resonant ground wire, or tunable counterpoise is still a bandaid, just like an RF ground. Sure it can help in certain cases, but if you use a proper antenna setup you will not need it or an RF ground at all. The need for RF grounding in the shack with normal antennas is the biggest old wives tale in ham radio. 1950's technology. It's the year 2000, not 1955. MK

Date: 2000-12-25 00:42:35 UTC
From: Richard Friedman <rchrd@rchrd.com>
Message-ID: <3A4697FA.AA0C44F3@rchrd.com>
Source record: 67143

```
I'm installing my IC-706MK2G in my camper for portable use. What I need
are fused polarized locking DC connectors (M/F) to attach to a cable from the cabin
battery. I need to be able to plug/unplug the Icom into/from the camper
to run portable.

You'd think this was a simple thing to find, but I've been to auto supply
stores, Radio Shack ("duh.. you want to what... ?), hardware stores, local
electrical supply stores... No one seems to carry such an item that is
rated for 10-gauge wire (20-30Amps).

This is the first time I've installed such a thing. Is there something I'm
missing here? Does someone know of a supplier? How DO you install a transceiver
that can draw up to 20 watts in a camper/RV?

Any advice greatly appreciated. (Meanwhile my Xmas gift to myself is sitting
cold.)

Richard,

I've been down the same road. Much of the heavy gauge wiring components are geared for the high power mobile stereo types. Gold plated goodies with prices to match. I finally tried an RV store. These folks have to wire up some heavy loads and quick disconnect hardware for trailer connections are the norm. I found a two conductor, heavy duty, quick disconnect with 10awg red/black wire pigtails attached. the plug halves each have one conductor exposed and one conductor recessed (polarized). Mirror images of each other. I don't recall the exact price, but it is far and away the most economical solution I have found. I use these on all of my radio gear now. radio Shack sells a very light weight version of this (not recommended).

Fuse holder with 10awg pigtails can also be a tough find. Many of the automotive blade type fuse holders with pigtails use12 awg or smaller wire. I located some in one, screw together, glass fuse holders, with 10 awg wire. These looked to be old stock and are probably not even made any more.

Bottom line, a well stocked RV parts store may have all the goodies you need.

Hope this helps. Happy Holidays!!!

Tracy, W7TRX

Hi Richard,
Go to www.grainger.com
Search on part # 6A069. There is a clicker so you can view the catalog page.
You have probably saw these connectors before. They are used on forklifts,
etc. I use ther on my service van to power a capstan winch used to hoist
commercial antennas, mounts and Heliax up towers. The Anderson brand shown in
the cross reference section of the catalog has a web site of their products, I
don't have their web address.
Good luck and enjoy that new rig.
73,
Dwayne KG4ADM

No way they are overkill! There is no such thing as overkill on a mobile 12 v supply. The better connection you have the better. Less voltage drop, FMing problems etc, etc. Myself, I would have nothing but anderson connectors. I've been using them for over ten years and I can say they are the greatest thing since sliced bread. I have them on all my radios, car power connections, etc, etc. Any plug will plug into another plug. So they are super handy. I can jump start my car without even getting out if I have a battery behind the back seat. They have different types of those connectors. They have the one piece grey ones, and also the split apart red@ black versions. Either ones good, but I prefer the grey one piece versions. They are rated at 50 amps/600v. They are great. If they ever quit making those I'm in deep doo-doo, as I refuse to use anything less. I keep a few new ones laying around for good measure. Like Tony the tiger says, theeeeeeiieeeeeeeerrr great! MK

Which I might add could include a properly installed Ladder line feed, or a properly installed coax feed with the proper decoupling of the antenna from the feedline. IE: a good balun or choke on a dipole, or radials, chokes, decoupling sections on a coax fed vertical. Bad antenna/feedline decoupling is the root of 90% of all shack rf problems. The rest can be fundimental overload, etc, in which case, again, the RF ground will have no effect at all.None, zip, nada. Can make things worse if the ground wire is radiating. If I were to run a station from a upper story room, the LAST thing I would want is an rf ground wire snaking though the house down to ground. Also, there are plenty of other examples, cars, airplanes, etc. You will have problems running an rf ground from a 737 at 35,000 ft. Look at most of your 2m mobile rigs, etc. Look for a ground connection. Huh? you mean you can't find it? Uh, oh, I guess there is no way that radio can work in the house without destroying the rest of the consumer goods in the house. Not...RF grounding is a bandaid unless you run a random wire directly from the shack with a tuner. That is the ONLY case you need an rf ground in the shack. In all other cases, it's not needed. You have to fix the real problem if you have rf in the shack. And those will almost always be common mode currents flowing on the shield due to lousy antenna/feedline decoupling. But, don't take my word for it! Test it out for yourselves. I learned the hard way a few years ago dealing with pesky rf problems with an icom I ran. After all that testing etc, I dumped the ground, made sure my decoupling is good, and no problems since. Sure, in a few cases, a ground can "cure" problems, but it's like fixing a bad fuel pump on a car by changing the filter. I still wouldn't plan any long trips...You have to fix the real problem. MK

Yep, that would have to be the R4C if it's a C line filter. All the earlier models up to the B line used built in lattice filters. There were no extra's to add. Now, there were a few commercial grade drake receivers, so it's possible it could go to one of those. IE: R4245 or whatever it was, and a couple others. MK

5694. Re: Hot water pipe ground?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-25 19:24:06 UTC
From: Bob Lewis <rlewis@staffnet.com>
Message-ID: <79N16.9685$wE3.11291@newsfeed.slurp.net>
Source record: 67070

I might also add that many who "think" they have an RF ground do not because the ground wire exibits inductance unless it is very short or cut to a multiple of a half wavelength. Even that water pipe is going to exibit varying degrees of inductance at different frequencies. If you need a truly effective RF ground, for the base of a 1/4 vertical for example, you need to have a system of radials. This is one reason that verticals often get a "bum rap". Some connect a vertical to one 8 foot ground rod and then complain that "verticals radiate equally poorly in all directions". That's sort of like putting up half of a dipole and then wondering why it doesn't work so well.

5695. Radio Shack HTX-242 HELP

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-25 19:43:23 UTC
From: ERGO Radio Software <ergo@swldx.com>
Message-ID: <vrN16.250974$76.5742278@news1.rdc1.ab.home.com>
Source record: 67071

I got the 242 2m rig for Christmas. Unfortunately, it arrived without a DC power cable. By this, I mean a cable with a matching female DC plug, fuse and wires to hook to either a power supply or auto 12V.

The person who bought this radio went to several Radio Shack stores looking for a complete boxed set. The manual does not specifically identify a DC power cable as part of the "unpack" items, but the manual does make reference to the cable and fuse.

In any event, I do not expect to get very far with the Radio Shack people. Any of you who got this 242, did you get a DC power cable with it? If not, were you able to find a matching connector and cable without difficulty, and where? Any help appreciated. Thanks.

5696. FS: Kenwood TS-940SAT HF Transceiver:

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-25 20:13:24 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <ETN16.191275$U46.5880829@news1.sttls1.wa.home.com>
Source record: 67072

FS: Kenwood TS-940SAT HF Transceiver:

- Serial number: 9090002 (late model with all the mods)
- Built in automatic antenna tuner
- YK-88C-1 CW filter ($88.00 from International Radio)
- YG-455C-1 CW filter ($155.00 from International Radio)
- Full service manual
- Operation manual

* Continuous receive from 100KHz-30MHz
* 160 through 10 meters transmit LSB, USB, CW, AM, FSK
* Dual VFO with A/B split band operation
* 10 meter FM with offset capability for repeaters
* 100 watt output all bands
* Auto tune any band in less than 20 seconds
* 40 memory channels
* Digital clock and auto timer
* I/O for PSK31 (uses the phone patch ports)
* Friction adjust for main tuning dial
* Built in power supply
* Many more features...

This is arguably the finest radio ever built by Kenwood.
I don't know of anything better for CW operation. Signals are
crystal clear using the above 400 Hz filters. SSB bandwidth can
be easily shaped and notched to bring you only the signal you
are looking for. 10 meter FM works as easily as your FM mobile rig.

All for $850.00 + shipping from 97006 (approx 50 lbs.).

Thanks,
Rick

I contacted Bob Heil about this.

I would really like to have a superb hand mic to go with my Icom 706IIG. The new HMM-IC has the round 8 pin connector. The heavy gauge cable used is not compatible with the modular plugs. I expressed my interest in a modular adapter for this mic. He will consider it if he sees enough interest.

Drop Bob an e-mail and ask for a modular adapter for this mic. Maybe Santa will come again soon.

In the mean time I will likely pick up one of the new Heil headset/mics for the 706 radios. Just waiting for them to be available in radio stores.

Happy Holidays, Tracy
W7TRX

Wow. So many good suggestions! If it weren't Xmas I'd be out searching among
the RV shops and other places mentioned.

The problem with just buying another power cable for the IC-706 is that its
too short. I've got a VW Eurovan Camper and the cabin batter is in the far far
back. I plan to use the IC either in the front or in the middle on one of the
foldout tables (depending on whether or not I'm driving, naturally.)

I guess I could make an extender for the cable, and add more fuses closer
to the battery, as has been suggested.

The Anderson connectors are a real solution. Turns out my local electronics
shop (Al Lasher's in Berkeley) sold me a set but they're too small.. I should
have gotten the 50A size.. I'm using 10gauge multistrand wire.

Come tomorrow I'll be back to get the larger connectors.

Thanks for all the great suggestions!

Steve,

The hand mic was not designed, nor intended, for use with the 706. It was
designed for Icom radios that have the round 8-pin connector. For the 706
radios (modular connector) Heil has the new headset/mic. This has a modular
connector and is made exclusively for the 706 radios. He considered making
the hand mic compatible with the 706 radios, but as I said before, the heavy
mic cable that is used with this mic does not work well with the modular
type connectors. Most businesses would just leave it at that. He said he
will consider providing an adapter (if there is enough interest) so the hand
mic can be used with the 706 radios. I can't think of another company that

would even bother to respond to my suggestion. Today's corporate customer service attitude is mostly "Take it or leave it!!" Bob listens and he responds to e-mails quicker than ANY business I have ever dealt with.

Hats off to Bob for offering what looks like some really nice products to help us Icom guys sound better.

Happy Holidays.

The "DC Power Cable" should be in the same area of the box as the microphone.. I just opened one I bought in October (Nope, I haven't installed it yet, can ya believe it??) and the cable has two fuses on it and it's right inside the top of the box in a box separate from the radio itself.. This separate box has the microphone in it also.. Does that make sense?? There's a small box in the big box.. It's as wide as the big box but only a couple of inches deep.. Under this box is the radio itself.. Anywho, I'm sure you've searched all the parts of the box for the cable.. Just wanted to let you know what was in my box cable wise..

Clear as mud??

HA you think that is bad i had to replace a hairpin match on a mosley 6 meter vertical and it cost me $23 for the part and shipping and handling and all it wound up being was a piece of 1/8th inch aluminum rod bent into a U shape and a small loop bent into one end to go over a bolt
you guys dont know what poor customer service is till you deal with mosley it took me 6 weeks to get that little piece of aluminum rod and every time i called to check on it they gave me some story or another
a year or so a go i ordered a new 2 meter yagi from them it took 8 weeks to get it from them then too
atleast when i order parts from cushcraft and it takes longer than suggested it was shipped with no charge at all
i think we all forget that these customer service people may not be hams and may be new and dont know the antenna and we have been out fighting with it and we are short on paitents and tack so we come in here and blow off steam
so calm down and relax before dealing with people on the phone
also try email i have very good luck with customer service via email

Thanks, Paul. That's exactly what I thought should happen, but the people
at Radio Shack don't seem to know their)(&@#% from a hole in the ground. I
guess in spite of the store's name, they don't really deal much with
"radios" any more, and not many of their staff know much about them.

Hi John,

With a little patients, and a lot of luck, you should be able to get a sales clerk to bring up the replacement parts on the screen and have them order the cable for you. I recently replaced the microphone on my HTX 242 and it was only about 30.00, so the cable shouldn't be much. You also may want to check radioshack.com for the part number and then bring that to the store.

Good Luck,
Joe - KR2V

I find myself wondering why you didn't buy a piece of aluminum at Home Depot or somewhere -- or use a piece of aluminum ground wire! -- and make your own? Worth not having the hassle, from what I read here about the company. Faster, too.

Source record: 67082

I e-mailed Bob Heil today (12/25) AND GOT A RESPONSE the very same day!

Here is part of it (referring to the HS-706 boomset for the Icom 706):

I operate lots of mobile and love this baby. I just can't see how ANYONE
can NOT use this set up vs. handmic. Guess it is just me, Bob...I HATE desk
stands, hand mics, VOX and accordions - ain't no damn excuse of any of those
! hi.... too many years of being in the big chair at KMOX, CBS radio for
the past 24 years with my 'High Tech Heil' consumer electronic talk show.
Love booms, footswitches, clean desks, etc. Just makes too much sense and I
am thrilled to be able to bring this hardware and these professional ideas
to the amateur radio market.

The problem with the hand mic and the modular is the cable is a very THICK
industrial grade SHIELDED (most are not!) cable - much too large to crimp
into those silly little modular connectors. One thing that 'could' be done
is to make an AD-1 adapter with a male 8 pin that the HMM-ic would connect
to...still rather see you use the HS-706.

Think about it. Please call me - let's chat...618-257-3000 be there
tomorrow.

Bob Heil, K9EID

You really should forget about finding the original power cord since they are all basically the same for RS, Alinco, Icom, Kenwood and Yaesu. I believe they are 14 ga and quite long. They drop too much voltage especially on high power. Best to make your own. Go to:
http://www.powerwerx.com/
and get some 10 ga. red/black zip cord in the length you will need. 12 ga. will be ok for short runs. Then get their OEM connector "T" type male for $1.99 a fuseholder and fuse and make your own. It will be much better than the one that was suppossed to come with the thing. I made mine with two male "T"'s on the end to plug in and run a 12 volt scanner at the same time as using my two meter rig. These are the same connectors that come with the rig and it doesn't hurt to have a couple of spares on hand.

Source record: 67091

Greetings...

I STILL have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer? I had this up on eBay, but the high bidder is not responding, and as I said, I'd rather trade anyway!!!

Tnx, es 73 de N9LXX~~~

Hi All,
If anyone is interested in purchasing a wide RX, dual-band, amateur radio, I have put my FT-90 up for auction. The radio is in great shape and comes with the YSK-90 ($69.00 if purchased new from HRO) original box, mounting hardware, and owner's manual. Check it out; it's very small and quite a cool radio.

Hi Clark:

I didn't think it would be possible to not have a browser and be at a .edu! :-)

There is a lot of action on this radio. Most of what I've read and seen is positive. But there is one looming negative and that is the user interface.

I know one local who got one and sold his 817 within a week because he didn't like the user interface. As an instrumentation sales engineer, I can appreciate that the smaller the front panel, the fewer the knobs, the greater the number of menus. And if devices have a lot of functions and a relatively small display, the menus get stacked or layered on top of one another. One of the consequences of these kinds of designs are that they can be very difficult to learn and remember how to use.

A friend of mine uses knitting needles as an example of something that is easy to use but can be very difficult to learn how to use.

Ham radio HTs are something like that also. Lots of functions, lots of buttons, lots of layered functions, small displays, and as a consequence, the manual and after market "cheat sheets" become the rule of the day. So the 817 might suffer from being too small, too cute, too difficult to get at.

One possible solution is to get a palm pilot programmed with essential settings and load the radio into known states of desired function.

Another is a full computer interface where pull down menus show grouped functions that are easier to setup and recall. But then the smallness is severely damped and the QRP battery operation is cramped. But there are small PC handhelds out there

that might be an assist.

5734. ICOM R7000 problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-26 19:16:43 UTC
From: "M. van Arnhem" <mvarnhem@wxs.nl>
Message-ID: <92aqm9$8r9$1@reader3.wxs.nl>
Source record: 66960

Hallo all,
Since some months I have a lot of problems with my ICOM R7000 receiver.
The receiver was sent for repair several times, and now after two months I
have the same problem again:
After switching on the receiver, nothing is heard, complete silence !
When the Meter Switch is selected for signal strengh, the S meter is
displayed to the right (maximum strength).
Can anybody suggest what is wrong so I can inform the distributor what to
look
for?
Thanks in advance,
Max

5735. Aircraft RX with ADI AR-147

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-26 19:52:39 UTC

Message-ID: <3a48f4e3.13937579@news.ng.nsis.com>
Source record: 66961

Bought an ADI ar-147. It has extended Rx for aircraft AM transmissons. Works well in VFO mode but can't seem to enter any of these frequencies into memory channels. I'm currently scanning the entire aircraft band between the upper and lower VFO limits in 250k steps. Effective but slow. Was wondering if anyone with a similar rig has figured out a way (if it IS possible) to enter these frequencies into memory channels. Everything else works like a charm in our 2-m band. Thanks....Scott VE1AFN ..>>

Just by way of information here. The R-2 sells for $175 brand new. The software for $36 and the ant. for $20. Thats $231 for all brand new with a yr warranty. Buying yours, I get NO warranty since Icom won't transfer warrantys to new owners. Thats why top price for used gear is about 70 to 75% of new or in this case about $270 tops. Just for your info as to why it may not be selling.

Glenn Marumoto wrote in message ...

5747. Cloning software to Icom T7H

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-26 22:18:33 UTC
From: Peter <sm5tri@_NOSPAM.passagen.se>
Message-ID: <ZO826.2075$Qb7.189104@newsb.telia.net>
Source record: 66973

Hi

Anyone have the cloning software for Icom T7H?

Icom's CS-T7 or
RT System's IC-T7H Programmer software (Windows version).

Anyone have a copy or point me to a download site.

// Peter
sm5tri@hem.passagen.se

Bob has always been at the forefront technologically and customer service wise. My comment was directed at a possible option that may have been overlooked. I am sure that if there is enough of a demand and it can be done functionally, Bob as usual will attend to it. The missing comment is that after all of these years, Bob still has the energy and patience to deal with the amateur market. As he says, it is a labor of love.

Thanks all for your comments. I went to several RS today and finally found the stock DC power cable. It seemed to be 12 gage, definitely more than 14. Several provided the tip on the powerwex connectors, and that's good to know.

Did it lose the transmitter completely or just lose output power? Yaesu had a problem with the coax on the internal duplexer that caused loss of output power.

Source record: 66978

Hi and thanks for reading this posting. Get a great Christmas present for yourself! I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

I've had good luck with a cheapy marine direction finder.

The rotating antennas are excellent for nulling interfering stations (unless they are in line with the desired station).

Buy one for a song on ebay.

. . . . hell will freeze tight before I ever again buy any HF antenna. Home-brewing antennas has never easier than it is today what with great resources like EZNEC, CAD, Reg Edward's gems and others on the deisgn side and the likes of Home Depot and who-knows-how-many web-based hardware sources which simply didn't exist "in the good old days". No ham can design and build a TS-2000 but fer cripes sake at least a lousy beam or vertical which doesn't have to be "supported" by a Cushcraft or Mosely? How lame are we, anyway??

Well, I could, but would have to know what type antennas and feedlines
you are using. You got lucky. You succesfully "bandaided" your system.
But you didn't fix the real problem. No problem here, if it works, it
works. But someday, you may change something, or run more power, or the
ground may get real dry, and it might come back again. In years past,
I've bandaided systems to work with 100w, only to find out when I turned
on an amp with 500-1000w, I didn't really fix anything. Actually, I
don't really need to know your antenna, I already know your problem was
poor decoupling from your antenna to the feedline. If it were not,
grounding wouldn't have helped at all. You got it to work ok by
bypassing the rf to ground, but you didn't fix the real problem which is
weak decoupling. But if it works, what the hey.... MK

5772. Telephone Recording

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-27 15:14:25 UTC
From: swoodwar@fix.net
Message-ID: <3a4b073e.3550243@news.fix.net>
Source record: 67000

Is anyone aware of a multi-line telephone that can be connected to a recorder that will allow recording of all conversations regardless of the line that is being used? Would need to take the recording audio from a point in the phone common to all lines, possibly the handset. Any info or other suggestions appreciated.

Steve

there is a device that is like a suction cup out there on the market that you can attatch to the hadset on the speaker side and record conversations regardless what line is used and you can hook it up to a regular tape recorder or a min tape recorder... try looking at www.galls.com in there audio and video section
hope that this helps

Radio Shack sells a $25 phone recording gizmo that works extremely
well; you'll also have to buy a cassette recorder with a remote
control input, which RS also sells. When the gizmo is clicked to the
"on" position, when you pick up the phone to answer it, the recorder
automatically starts recording.

I can't recall whether the gizmo connects between the wall outlet and
phone, or between the phone and headset. You might check your nearby
RS and see what they say.

5775. TS-570 vs FT-920?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-27 16:40:29 UTC
From: Bob Smiton <replytousenet@usenet.com>
Message-ID: <tj6k4tornggjj865m0a4k52uadr1ujna5l@4ax.com>
Source record: 67003

Looking at getting a used FT-920 or a new TS-570. Any comments
on these models and opinions on this choice.

ARRL stats show the FT-920 specs are better.

thanks

While the shuttle might reach the same altitude as the AO-40 perigee,
the problem is that due to the large eccentricity, at perigee the
AO-40 will have a speed several km/s larger than the shuttle, so there
is absolutely no way the shuttle could catch it.

From: Steve Woodruff <sjwoodr.nospam@nospam.email.com>
Message-ID: <92eejo$4l5$1@flood.xnet.com>
Source record: 67019

New to the HF world, the antenna tuner puzzles me. Aside from knowing exactly how it works, when a tuner claims to "match nearly any antenna" over 1.8-30Mhz, what restrictions are there? I mean, if i tried to tune a 2-meter J-pole for 40meters, how could it possibly work? Doesn't the antenna have to match fractions of wavelengths, etc... ?

Maybe you didn't look properly.

I just checked some obvious sites, and the news is here (and
probably on all kinds of other websites):

http://www.rac.ca

http://www.arrl.org

http://www.amsat.org

While this thread started with a post from someone who seemed to
be glad that there was a problem, I don't quite see why
a couple of people would say there has been a response without
there being some basis. The logical step then is to do some
looking around to see what the official websites are saying.

While I can think of plenty of times when groups have failed
because they didn't do things properly, the only way I can see
a satellite being perfectly non-risky is by not launching it.
Kind of defeats it's purpose. It would be a horrible thing if
this satellite doesn't work, after all the time and money put
into it, but even if it never worked it would hardly be a failure.

Was it Oscar 3 or 4 that ended up in a bad orbit, so it didn't
work out as intended? And then there was another Amsat sometime
in the past fifteen years, where a really large antenna had to
be used to make intital contact, because of some desensing problem.

But the first amateur radio satellite, and I thought the first amateur
satellite by any group, went up in late 1961. That was only four
years after Sputnik, the first satellite, went up. Don Stoner makes
a passing comment in CQ, wondering if anyone has any space in a rocket,
and soon someone had arranged space, and there was a satellite to launch.
Oscar One was a "completely useless" thing, with a life of a few weeks
at the most, and all it could do was send out "hi" in morse code;

I think some telemtry was sent by the method of controlling the speed of the code. What use was that? Nothing in the immediate, but terribly useful in proving that amateurs could build a satellite and empty space could be used to launch it, and then all the learning done to make it happen and track it.

While I would think some other group would have come up with the idea eventually, amateur radio was the first to hitch-hike into space. The whole concept has helped countries get into space who otherwise would not be able to afford the expense of big satellites.

The following Oscars weren't all that useful either. I don't iknow which one was the first one with a translator, but those early ones did not have a very long life, and there was that one that landed in a screwy orbit that made it's use problematic.

All that was before my time.

But I can remember when Oscar 6 went up in the fall of 1972. This was going to be the big one, more extensive than the previous ones and having a longer life. I forget exactly how long it actually lasted, but it kept going longer than they had said it would when launched.

Next year it will mark the fortieth year of amateur radio in space. Just like amateur radio is synonymous with radio, since the hobby dates back to the beginning of radio, amateur radio has practically been in space since the first satellite.

Each time an amateur satellite has been launched, it has served some purpose to extend the art. Our satellites may lag behind commercial satellites, but considering the budget considerations, we do pretty well. Those "crummy little satellites" from thirty to forty years ago may not seem all that spectacular now, but at the time they sure were, and there existence has helped lay the groundwork for the satellites that followed. People wouldn't have amateur satellites today that have lifespan in years, if those limited life satellites hadn't gone up, and any failures that have occurred over the years have helped make the next satellite better.

This latest one is number forty. There have been so many amateur satellites in these forty years that I can't keep track of them all. There must have been failures, and I thought the USSR launched some amateur satellites that used a different numbering scheme, so the count may be higher than forty.

That is an amazing accomplishment.

If this latest one doesn't work, it will be sad. But it is nothing to gloat about. And in truth, there will be future amateur satellites, and they will benefit from the launch of this latest one, whether or not it works.

Instead of trashing amateur satellites, we should be considering how few, if any, satellites are up there other than government, military and commercial. Yet there are such things as amateur radio satellites.

The real puzzle here is why we don't read about the launches in the papers, because even forty years after the first amateur satellite, another one is still a major accomplishment.

Look on amsat.org

They issued a hard reset and telemetry is running on S-band so far.
They have to upload all the operational software now.

Source record: 67032

Steve - What the tuner does is match the rf "impedance". It gives the radio or amp a "false" impression that it is seeing what it wants or needs. The reference to wavelength in antenna construction is to create the proper impedance "match" with the rf transmission device. The tuner removes the need for this match by creating a match between it and the rf transmission device, (radio or amp), and then transforming the impedance over to the antenna.

Once you use the tuner the wavelength requirements are basically thrown out. There are indeed limits, but the limits are on the tuners ability to transform the mismatch.

You'll be amazed what you CAN tune up on HF with one.

Now this doesn't say anything about the efficiency of the antenna. This can be sorely pathetic depending on what you are trying to use on a specific frequency. So while the transmission device may be happy and content, the signal going out on the air may be worth no more than that from a wet noodle.

The real intent of tuners (matchers), is to allow say a 80 meter dipole to work well at 75 meters. When you use a 20 meter dipole for 80 meters the efficiency goes down significantly.

> New to the HF world, the antenna tuner puzzles me.

There are basically two classes of "tuners". One is probably more correctly termed a "matchbox" which is designed for coax input and output. The purpose is to convert the impedance of the load (antenna and coax feedline) to a nice 50 ohms for the transmitter. The range on these is fairly limited. It only reduces the SWR on the piece of coax between the matchbox and the transmitter. The loss due to high SWR in the coax between the antenna and the matchbox remains the same. For this reason the antenna needs to be fairly close to resonance in order to maintain a reasonable SWR on that coax. This is the type of tuner built in to many HF transceivers.

The other type is a real "tuner" which is designed to be mounted outside and connected directly to the antenna (an inverted "L" or a random length wire perhaps). For example, these can often tune an 80-foot wire to any band in the HF range. Since all the coax is between the tuner and the transmitter, it's all working at 50 ohms and there is no added loss due to the SWR.

Hi all,

If anyones after accessory plugs, bits and pieces for PRM80 series radios, pop me an email.
ezyt@optushome.com.au
Worked for a Large Simoco Distributor (ex distributors) as a senior radio tech. (cant stand another look @ a prm80 series apart from the 8041's. Excellent radios)

Have a stack of simoco mics, microphones, accessory plugs, few other things like remote brackets etc etc etc. Basically all brand new in plastic/boxes. Sorry no radios. Sold them all. Just stuff thats sitting in the garage doing nothing,, so if anyones interested in purchasing anything , just email and shouldnt be a problem posting stuff or just come pick up.

Regards,

Ezat

Noise can come from the power supply/computer and the monitor. Some monitors can be extremely noisy and one resolution and quite at another.

First, make sure everything, radios, computer, monitor, etc. are well grounded.

Turn off the monitor only and see if there is a change. If so, try changing resolutions.

Take a hunk of coax with a couple of inches of center conductor exposed and use it with your radio as a "sniffer" to see if you can find an especially noisy cable/power cord.

Put several ferrite chokes on any cable/power cord that appears to be noisy.

That sounds more like what i'm thinking of. Something "in" the shack, not outside mounted on the antenna. If I were to make a dipole in the shape of a U (laying on its face and fed at center) would that alone change the impedance of the antenna? I can manage about 55 feet in a U, given my space limitations in my attic. (18 leg, 9.5/feed/9.5, 18 leg). Anyone want
to make a prediction on its worthiness? Not quite long enough for 40m...

I've also seen some text which said an antenna can be shortened by as much as 50% by placing inductors in the antenna. Is that something an antenna tuner can do or do you really need the mods on the antenna? Does anyone have any practical suggestions here? Thanks...

Steve - This is the type of tuner I was referring to.

Yes, you can do what you are trying to do. Because the antenna is so electrically short, the feedline (coax) from the tuner to the antenna feedpoint will radiate RF. The SWR on the feedline will still be high.

The only thing the tuner is doing is making the radio or amp happy. You will have reduced antenna efficiency for both receive and transmit.

You may want to consider something like a "Z" in stead of a "U" shape. If you are using a larger diameter magnet wire, you can run it back and forth in the attic several times to increase the length.

You may also wrap heavy gauge magnet wire around a piece of PVC pipe and solder it in line in each leg. Thereby creating your own loads on each leg. These should be placed the same distance from the feedpoint, and have the same diameter and same number of turns.

Once you have enough length to keep the RF down on the feedline, then use the tuner to use it on any band you wish - keeping in mind that the further you are from resonance, the more RF on the coax from the tuner to the feedpoint.

Hmm... ok. I'm planning on using 12 or 14ga solid wire (insulated).
If i were to use a "Z", where would the feed point be? Center of Z? If I
were
to run the wire back and forth several times to get my desired length,
wouldn't
there be some problems of "cancelation" because the wire is back-and-forth
so much? As for your idea of creating loads on each leg of the U (or Z), is
there any rule as to the diameter of the pvc tube, or the length/spacing of
the
turns?

Thanks for all the info.

I am also waiting to hear from users. However, this radio was pulled from release to the US market at the last minute due to a problem with audio "hiss" and is not scheduled to be released until January 2001. I have seen a few responses from oversees users and so far appears to be positive but not enough detailed info.

First - Larger gauge is better - Reason - Skin effect. Skin effect comes into play as you go higher in frequency. Less important on 160 an 80 mtrs, but more pronounced at 10 mtrs.

Second - Yes, the feedpoint would be the center of the "Z".

Cancellation may occur to some extent, but not a major extent unless you happen to cause the waves to overlay closely. Remember - you are trying to get the best you can from a less than ideal situation. The best you can do is to get the most radiator you can up there.

I will ask if you have an ARRL handbook or antenna book? If not I'll dig in and try to give you some info on "loads". The more load you add, the less the length of the legs. BUT - you begin to give up efficiency again. The other problem is if you plane to make use of multiple bands. A load can prove to be, and certainly WILL become a choke at some frequency. So for another band you may really throw everything off kilter.

As to the turns of a load, my experience and observation has been that they are "close" wound, or insulation lying directly against the next turn.

Ok- let's concentrate on your statement "get the most radiator you can up there".
Would multiple back-to-back Z's be in order: |\|\|\| feed |/|/|/| ?

If so, would it be best to put up multiple instances? (ie: 1/2 wavelength exact-length
for different bands) or just one huge nest of wire and then attempt to tune it to all bands?

I don't have the ARRL Antenna book... i've looked for it at Borders, Crown Books,
and Barnes and Nobles in my area, but they don't seem to stock any good ham books. They all can order it (as could I online) but i generally like to look at what i'm
buying before i buy it. Thanks for the info. Hopefully some other lurkers will also
benefit from this discussion.

Source record: 66907

First question - > Would multiple back-to-back Z's be in order: |\|\|\|
feed |/|/|/| ?
Answer - yes. That allows you to get the 1/2 wavelength up in a restricted
space.

Second Question - > If so, would it be best to put up multiple instances?
(ie: 1/2 wavelength exact-length for different bands)
Answer - If possible it would probably be the best solution

Okay - I have an "olllllld" antenna book, a couple of ARRL Handbooks, and
two editions of the radio handbook by William Orr, W6SAI. If you want me to
look at loaded dipoles, I'll dig in and get you what there is.

I'll tell you a little secret - a dipole or inverted "V" at the specified
height above ground and the specified length stretched out as per the "book"
is only in the ideal situation where you can do it. Folding wire antennas
into spirals, "Ws", "Zs", or what not will work very well. The biggest
trick is to get the "electrical" length.

I've spent about 2 weeks' worth of evenings browsing a hundred
web pages looking for a feasible antenna solution. Your advice
is appreciated! Here's my current idea: I'm probally most
interested in 15/20/40 operation for now, but while i'm at it, i
might as well string up an 80m wire as well. Since my side-to-side
distance is about 20', i figure i need this:

15m (22.21 feet), / feed \ (11.1' per leg)
20m (33.19 feet), / feed \ (16.6' per leg)
40m (65.92 feet), \/ feed \/ (32.9' per "V")
80m (130.00 feet), /\/ feed \/\ (65.0' per "Z")

Seems like i read some time back that if you use insulated
wire it should be a bit shorter...

Steve,

You are certainly welcome. Hams stick together and help each other. That was what I was taught, and that is what I do.

I feel honored to be appreciated. Anyway.....

Without cranking through calculations, your numbers look pretty much right on the money. All four of them - Yes - ALL four of them can be attached to the same feedline - at the same feedpoint.

There is "some" truth in insulation effect on length. I recommend cutting long, then trim to tune your desired center frequency for each band. If you find an old electric motor or dry transformer, you can take it apart and use the varnished wire that is used for the turns. This is what is called enameled or magnet wire.

Another word of wisdom - DO tune the highest frequency (shortest dipole) first. Trust me on this one! Even Alpha Delta and GR5V (or is it G5RV?) say the same thing.

What is wrong with a "cheap" solution? I've been a ham now for about 20 years. I have been building wire antennas, aluminum antennas, and whatever. You DON'T have to be rich to have this hobby. Insane - perhaps.

I see "9" land - Where might I ask? I have a "0" call that I got while in Missouri as a Drill Sergeant. Like a dummy I checked the wrong block on the FCC 610. I am currently living in Manassas, VA. Original call was KA4PBD.

Ahh! That's something i wouldn't have thought of.... but it does
make sense. Power would flow to the wire which is closest
to being resonant? Is there any concern here with the non-resonant
wires being in close proximity (the longest wire would have two 175
degree turns) ?

> Another word of wisdom - DO tune the highest frequency
> (shortest dipole) first. Trust me on this one!
I'll take your word for it... but what is the reasoning? Or is
it only appropriate because when all four are using the same feedpoint?

> What is wrong with a "cheap" solution?
Not a thing! I'm all for cheap...

The G5RV and Alpha Delta, and some of the ones in the books have the elements run parallel, and in close proximity. I have an Alpha Delta up now, had a G5RV up some time back, and made a homemade wire job years ago. The Alpha Delta and the G5RV have them within a half to three-quarters of an inch apart. True - they aren't folded back. The end points are the high voltage nodes, the feedpoint is the low voltage high current node. If you won't tell the antenna it has two 175 Deg turns - I won't.

I want to learn all about radio and electronics, and would like advice on what books and testing equipment to buy. I bought the GROL exam book by Gordon West (I will have an Extra License soon), but I am looking for a more instructional book or course on how to use electronic testing equipment and on understanding electronics. I know the basics only.

It's O.K. to reply directly to me if you prefer it to the group.

Message-ID: <t4nlc8gab3g217@corp.supernews.com>
Source record: 66922

Tradition has the thumb paddle being for dits and the finger paddle being for being dahs, but many advanced keyers (i.e., Logikey K-3 and AEA MM-3) can reverse the paddles very easily using their software.

For instance, the AEA MM-3 ("the Morse Machine") reverses the dah/dit paddles by just entering the code *C712 on the code pad. So if someone wants to use your station who is of the "other" persuasion, just hit the 5 digits, and away they go!

The important thing is to get on CW and have FUN!

I have for sale in excellent condition a DSI frequency counter model 5500 which covers 50HZ to over 500MHZ.....

Specifications.....

Frequency Range: Non-Prescaled 50 HZ to 50 MHZ TYP.
Prescaled 30 MHZ to 512 MHZ TYP.

Sensitivity: Non-Prescaled 10-15MV. 100HZ - 25 MHZ
Prescaled 10-15 MV. 50MHZ - 250 MHZ
15-50MV. 250MHZ - 450MHZ

Resolution: Non-Prescaled 1 HZ / 10 HZ
Prescaled 10 HZ / 100HZ

TimeBase: 3.579545 MHZ Temperature Compensated

Accuracy: + or - 1PPM 20 35 Degrees Celsius

Aging of TimeBase .2 PPM Per Month Typical

Input Impedance: Non-Prescaled 1 Megohm / 30PF
Prescaled 50 Ohms / 25PF

Display: 8 Digit Red Led, 1/3 Inch seven segment, automatic
decimal
point placement, leading zero suppression

Input Connectors: Two BNC, Prescaled and Non-Prescaled

Power Required: 8.0 to 12.0 volts 115 VAC with optional AC adapter, also comes with rechargeable NI-CAD Baterries 6AAA Cells, 180 MAH Capacity

I will take $50 plus shipping 48 states only and can be reached at (508) 821-2993 or E-mail.....WZ1U Steve / Lakeville, Ma.

The obstacles that would need to be overcome would include the power demands from that far a distance. I have always thought a 2 meter repeater on the moom would be a nice accomplishment.

Folks,

Can anyone suggest the most economical source for a YK-88CN CW (270hz)
filter for an older Kenwood TS-440s? Not the YK-88CN-1, but the original
that needed to be soldered in. Could be a Kenwood clone, of course.

Even a good used one would be welcome.

Actually, there was a plan for doing this back in the sixties.

It was called Project Moonray, and the idea was to include an
amateur translator on one of the last trips to the moon.

I remember reading at least one article about the project in CQ, it
must have been in 1968 or 69 though I first read the article a
few years after the fact. I just did a quick search through my
old magazines, and can't find the article.

I was never sure how much of it was dreaming, and how much of it
was real. From memory of the article, they had worked out the details,
and it was do-able.

I just did a websearch, and there is a bit about the project here:
http://www.nitehawk.com/rasmit/nick.html

Among other things, it says the project was intended to go up with
Apollo 18, but the Apollo Project was cancelled before we got to
that number.

The websearch also turned up some hits a few years old indicating
there were plans to revive the project.

Someone with QST on CDROM might check the annual index from '68 and '69
to see if there's mention of Project Moonray. I did check my QSTs,
but not only are they not all in the same place or neatly ordered, but
I didn't bother checking the VHF column.

Hello all,,
Ive sold a fair bit already, but heres whats left..
The following gear has all been tested and working. Well the stuff that i could test. =)

1. 5 x Brand New Simoco Microphones (Black Colour) in boxes
2. 1 x Ok Condition Phillips microphone
3. 5 x Brand New microphone magnetic holders(still in plastic and with fuse and fuse holders)
4. 6 x Facilities Plugs with rubbers BRAND NEW (no screws, sorry). if you dont know what their for, external ptt, audio , data from back via db15.
5. 1 x Sigtone Ctcss Subtone Board (Working) . Good condition
6. Tait T500 CTCSS board (working)
7. 1 x Speaker bracket to suit new simoco speaker.
8. 2 x PRM8010 windows and labels (New)
9. 6 x Simoco Mic Covers(Some black covers, some grey.. Suit 8025 and Remote 8030)
10. 6 x Phillips lock screws(hard to find and they do the right job)
11. 6 x Kenwood TK370 battery holders. Used when battery is damaged, and has intermittent on off operation.
12. 10 x Kenwood Tk370 volume and channel knobs (Brand New)
13. 3 x Simoco/Phillips Power Cable sets. (Brand NEW never been used)
14. PRM8020 Display heads and shell. (4 digit only). Working or not. As is
15. Motorola Syntrx ORIGINAL SPEAKER. Very Hard to find. In excellent condition
16. Have 5 x Tait T196 30 watt VHF radios, all working. Come with all brackets microphone and power leads etc. Need to get rid of them cause theyve been sitting here for ages and never being used. Very cheap.. Just make me an offer on it. =)
17, 1 x Johnson 800mhz 25 watt mobile, with microphone. WORking in near new condition .. Comes with power lead.

If your after radio programming, i do them very cheap. can basically program all kenwood uhf and vhf, Phillips uhf vhf, Motorola, Tait and a lot of portables ..
or if you want a programming cable, I can cook one up for you. =)

Well thats about it.
If your interested, please email me back on what you are interested in and an offer. Will send only gear around australia. Im looking for an Antenna tuner if anyones interested in a swap. They can take the lot if its an ok

Tuner. Needed for a TS430s Kenwood.

Regards,

Ezat

5863. SB200 Filter Caps

Newsgroup: rec.radio.amateur.equipment

From: Charlie B <rexrep@email.msn.com>
Message-ID: <uc45B3VcAHA.280@cpmsnbbsa07>
Source record: 66941

Does any one know where to get SB200 filter caps? I suspect some supplier has something available that I don't have to retrofit, since the original caps have "push-on" lugs which are soldered to the board. I would rather not do too much board rework to make new caps fit.

Thanks in advance.

Charlie KJ3R

It probably won't matter that they cross.

I really don't know what formula to use in determining the voltage and current nodes. I've never even considered trying. Perhaps someone else can add to this?

Source record: 66854

I'm just getting back into amateur radio after a lengthy layoff. Before I left the hobby, I picked up a Yaesu FT-890 HF rig, but didn't get the opportunity to use it much. No manual came with the rig.

The last several days I have been trying to get the combination of the Ft-890 and the AL-80A to work together. The problem is that while the radio keys the amplifier fine, via the PTT line, the rig itself drops back to receive with the mic key held in the keyed position. The PTT relay in the amp stays keyed as long as the mic key is depressed. I've tried this on AM, FM and CW. Same results.

I've checked the hookups and all appears to be correct. Any thoughts?

If that's the case, you'll never buy any ham books :-)

Go the the ARRL site, http://www.arrl.org and you can order any number
of ham-oriented books from there. "The ARRL Handbook for Radio
Amateurs" and the "ARRL Antenna Book" are two that are essential, and
should be in your library. They run about $30 apiece, and you more
than get your money's worth. There's also a bit of sales info at the
site, so you're not buying "blind."

These two books will answer an awful of of questions -- far more than
can be answered in a news group.

Good luck!

Bob

You will likely see a bit of coupling if they are close. Most likely if you do have a problem, it will be one of the higher bands. Usually when you parallel dipoles on one feed and do show coupling effects , it will almost always be a higher band that has problems. But I guess exceptions could happen if the 80 legs were coupling into house wiring or something like that. One note, I noticed the other poster mentioned tuning the high bands first. I have to disagree there. I think you are better off tuning the low bands first. "For the previously mentioned reason". If you do show coupling between the legs, you can still get a good match if you diddle with the lengths and the position of the feedpoint. Say you had 80m working ok, but you go to 40m, and have a coupling problem between 80/40. If this were the case, it's a 85% chance that the 40m legs will show the problem, not the 80m. So what you can do is vary the feedpoint of the 40m legs to get a better match. IE: add to one side, and take off from the other a bit. What you do is shift the center point a bit and it will act as a form of gamma match, and you can get it tuned usually. Also if you have 40m legs, the 15m legs are not needed. So thats some wire you could do away with. I use parallel dipoles here, but are outside, and fairly normally spread apart. Remember if you show a coupling problem, don't forget that you have house wiring , pipes, etc, so those can cause problems too. I wouldn't worry about the current and voltages. Won't help you with what you are doing. On a center fed dipole of 1/2 wl, the max current point is at the apex. Max voltage at the ends. With a 100w radio, you could see voltages in the 700-800 v range at the ends. With a KW, can be 10 times that much. So you can see you need insulators at the ends. A project like this is just something you'll have to cut and try. You may make quite a few trips back and forth before you get it tuned up. With parallel dipoles that are spread apart at right angles there is almost no interaction at all. So the farther apart the better. MK

I replaced my SB-200 filters with the Harbachs and also did his other
modifications. He has an optical interface chip to isolate the
transceiver/driver from the amp. Relays in modern transceivers are
built to switch to sort of current the original SB-200 had. There is
also a start up module to prevent thermal shock on the filaments of
the 572's in the SB-200. He has similar mods for the SB-220.
All three mods took my only a couple of hours to put in. Highly
recommended.

5882. Re: Gap Titan DX Ant any Good!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-29 16:31:45 UTC
From: WA8DBW <richardr@sssnet.com>
Message-ID: <t4pf7a874etv4b@corp.supernews.com>
Source record: 66860

I have one in use and it works great. I have run 1500 watts with no problem. The Titan is very good 40 through 10 meters and OK on 75.

I generally use my 160 meter Windom antenna through the tuner on 160 to 40 meters. It is 265 feet long though. On 40 to 10 the Titan is generally as good and sometimes better, sometimes worse, depending on propagation and locations of the stations. The Windom is in a North South orientation.

For those that have limited space and desire a single antenna for 75/80 through 10 meters it is hard to beat. It requires no tuner and the only adjustment is for 40 meters or if you wish 80 meter CW coverage - Gap will supply a capacitor. I use a tuner for when I wish to work 80 CW.

Selling one of my trusty Heathkit HW-9 with WARC bands.
I have two of these rigs and they've been sitting on a shelf since I've mostly been using my monoband qrp rigs lately.

The rig is in excellent condition; Original paint. Front and rear panels are virtually mint, top and bottom are excellent with few mostly superficial marks. Key jack was changed from RCA to common 1/4" jack. Otherwise all original...no other mods. I rate the condition conservatively at 9.5 out of 10. Definitely in 'collectable' condition.

Includes manual and loose illustration booklet (pictorials).

US $325

e-mail me if interested.

What about the ALC line interface on the back. I have a FT-890, there
is also a dip switch accessed through the hole on the bottom to do with
activating the internal realy for keying an amp. I am at work and
don't have the manual. You may call me at home this weekend.

5886. FS: Kenwood TS-790A tri-band transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-29 18:38:21 UTC
From: Louis Albert <lalbert@uakron.edu>
Message-ID: <3A4CD9EC.8F37DCFE@uakron.edu>
Source record: 66864

A combination of three high-performance all-mode transceivers rolled into one is the best way to describe the all new Kenwood TS-790A tri-band transceiver. 2 meters and 70 cm are built-in and with the addition of the optional UT-10 (1200 MHz) you have the ultimate in VHF/UHF communications. Power on 2 meters is 45 watts on FM or 35 watts on SSB. Power on 440 is 40 watts FM / 30 watts SSB. The TS-790A is the ideal radio for the serious satellite, moonbounce or grid square DX operator. Requires 12 VDC at 15 Amps.

It has a small problem with the fan. It does not work and will lower the power. It includes the UT-10 and accesores. $1150.00 shipped!

>amplification involved within the microphone. If anyone knows any info on
>this mic, would be appreciated.

I've had one since 1972 or so. First used it on an ol' NCX-500 --
then on my TS-520. It's now on my IC-551. I have *always* gotten
Very Nice compliments on the audio quality.

I have a second one (that came from my father's estate) on my IC-251.
That rig requires a pre-amp in the mic., so I built a wee one in
the base of the Shure and it works FB.

I don't know what you mean by "...it just has an insert...".
There were 'power mic' versions made -- maybe a different model
number was used. I think those first showed up back when a
Power Mic was *the thing* to have with CB'ers -- so you could
hear the wife in the kitchen at the other end of the trailer.

I have the following Icom handheld transceivers for sale. Both are as new and complete with boxes, manuals and chargers etc:-

IC-T8E Tri-bander, 6m, 2m and 70 cms.
£200

IC-T81E Quad bander, 6m, 2m, 70 cms & 23 cms.
£250

Both are virtually unused for tx-ing and have only been used for listening in and around the house.

I said "There is nothing attractive about having equipment on the moon.".
That does not state anything about orbiting satellites, those are a
completely different animal.

People suggesting it would be neat to have something on the moon usuallY
(always?) have not realized the problems associated with getting something
there, keeping it working, and then doing something useful with it.

You can have a repeater on the bottom of the atlantic. But that does not
mean it is an attractive thing to have.

In the last couple of visits I've made to the Ham section on E-Bay,
I've seen a Radio Shack HTX-242 being bid on for $145.00.. And the bad
thing about that one is that the Reserve hadn't even been met yet?!?!
I just bought a HTX-242 directly from a local Radio Shack for $119.00..
And they paid to have it shipped from another store..

The second item I just saw a few minutes ago was for one of those
little Radio Shack Simplex Repeaters.. They didn't last long on the
shelves before RS started clearancing them out.. Well, the local Shack
has it clearanced at $29.99... The price I saw on E-Bay where someone
bought it outright was $53.00!! AND they'll be paying for shipping!!

I say all this in the hopes that the radio operators in this community
will try and help out other hams and point them to readily available
good deals and not towards E-Bay and other auction houses where they
pay more than retail..

I don't know how some people can sleep when they sell things on E-Bay..

Just my 2 cents worth.. or would that be $12.45 on E-Bay??

>There is nothing attractive about having equipment on the moon.

One attraction is that the moon is visible for a minimum of 20 days
per month; amateur gear up there could provide consistant communications
for 2/3 of each month (or until the batteries ran down during the
periods when the moon is in the Earth's shadow).

>(this has been beaten to death before, try checking some archive services)

Maybe so, but now we have at least seven private corporations that
are showing an interest in sending packages to the moon; we've never
had that before -- that solves a huge logistics problem.

Paul,

I offer everything here first. As always I get low-balled and cited by
the Price Police.
I have sold a few items on E-Bay as of late and NEVER had they been
auctioned for more than a new model. I tried to sell a MINT condition
Kenwood TH-D7 here on the NG and I received some very insulting offers. $200
for that radio? I think not. Sold it on Ebay for an additional $100.
Am I greedy? No, just tired of being dragged through the mud here on RRS.

I just sold an MFJ 6M SSB on E-Bay for $199.50 that nobody here
wanted...They're still $269.99 new and mine had the mic and optional CW
board.

I sold a Motorola P1225 VHF and very good condition for $250. They're a
lot more than that new.

I guess my point is this, not all of us are sucking the blood of innocent victims as you portray.
And yes, I sleep just fine...

Probably a microphonic VCO circuit. Could be loose hardware around the VCO or it could be the PLL loop voltage is set incorrectly. Usually a capacitor or inductor in the VCO is adjusted to get a specific test point voltage on a given frequency. You need the service manual to do this adjustment properly.

Pete Kanikula wrote:

E-Bay attracts buyers, probably some with more money than sense. But
RecRadioSwap seems to have a lot of tire kickers.

Its got a very base driven hump sound which i like. Is that how yours
sounds?

Its been a very good microphone and never missed a beat. Does Shure still
make microphones in this range? I know they make studio microphones.

Regards,

Ezat

Well I don't agree with you at all Rob. BTW, sorry to sound so harsh in the
first post there and thanks for not escalating the flames. In my opinion having
a repeater on the moon is no more inaccessible than having a repeater in orbit,

both are pretty well 'on their own' so to speak.

Hell, guys even bounce signals off the moon so why not use a repeater?...think of the prestige!...think of the fun of seeing how little power you can use to 'chunk' it!...gee...when it IDs in Morse you tell your neighbour that he's listening to "a ham radio transmitter on the moon"...instant big impression!...where's your 'experiment quotient'?.

When 'man first set foot on the moon' I took my two boys and two girls outside that night and pointed out the bright moon and told them that there was two men walking around on the surface there 'Right Now'...they remember it to this day! (at least the boys do!) and they were around 4 or 5 then!.

A Few Weeks ago I had put out a message saying that Cushcraft had given me poor customer service. I had a R8 Vertical (6-40 Meters) and it had been working well and all of a sudden it just stopped working. I talked to them and they had me send the matching network back (The Black Box). A week after I returned it I got it back with a form letter saying it had been tested and it was fine. To say the lest I was unhappy with them.

Well I have to say that 3 days after I got the matching network back they called and left a message on our machine saying that they had sent me the wrong matching network and was sending a NEW one out that day. New Years Day I put it all back together and my Son and Neighbor helped me put it back up and its now WORKING GREAT AGAIN!

It took some time but CUSHCRAFT TOOK CARE OF ME!

I thought it only fair that I let everyone know after I had told everyone about the trouble I had.....

I still have the old matching box and if Cushcraft does not ask for the one one back I am going to take it apart and see what I can see. I think its a bad soder connection. It also had a much larger Cap, its the same value but its larger in size.... Hmmmmmm I realy want to tear it apart and figure it out.

73's Everyone and thanks for all the help from the group

Your astronomy is incorrect. The moon keeps the same side toward earth at all times, plus or minus a few degrees, so your proposed rig would be workable at some time of day every day of the month, assuming that your proposed frequency isn't swamped by the sun on those few days each month that the moon is near the sun in the sky. However, it would be in total darkness for approximately two weeks each month.

A free market with accurate information is the best economic system
going.

I've been outbid many times on Ebay, I bid no more than 2/3 of retail
for used equipment. But if someone else believes it is worth 90% of
retail, they are welcome to it. When I clean up the shack, a couple of
radios will be on Ebay. I'm hoping for fierce bidding.

Long live capitalism.

Yes, we all learned that in elementary school science. That doesn't
change the fact that the moon is *visible* for a minumum of 20 days
per month. The remaining time the equipment would be in the shadow
of the earth and the batteries wouldn't be charging.

Jim Shaffer, Jr. <jshaffer@mail.csrlink.net> wrote:

>Your astronomy is incorrect.

No it's not. Because there is no difference in the periods of rotation and revolution, the same side of the moon is always turned toward the earth. However, about 59% of the moon's surface has been seen from earth, due to libration: Libration in latitude occurs because the axis of rotation is tilted about 6.5 degrees WRT the axis of revolution. Libration in longitude occurs because the speed of revolution varies in accordance with Kepler's second law, while the rotational speed is essentially constant. Diurnal libration occurs because the changing position of the observer relative to the moon, due to rotation of the earth. Physical libration is a small pendulum-like rotational oscillation of the moon with respect to its radius vector.

That is actually pretty bad. An earth-orbiting satellite would be visible
every day and could even be visible all the time.

>amateur gear up there could provide consistant communications
>for 2/3 of each month (or until the batteries ran down during the
>periods when the moon is in the Earth's shadow).

It does not work like that. Study it again.

This certainly shows you have not informed yourself before.
Read up on the situation, the problems, and the usefulness of the result in
one of the many posts that have been made before, or the G3RUH article.

Many amateurs may be prepared to donate money to get a useful satellite
to do every-day experiments. Few will be prepared to donate money to
compete with the government or private corporations about "prestige".

I think e-bay is the best maketplace yet devised for used ham gear. More stuff. More selection. Full color pictures. Lotta descriptive words. Far better than the bitty classifieds in QST that I used to peruse.

No one is forcing anyone to pay more than retail. And for every piece that does go way over retail, there are just as many that go at very decent or ultra-low prices.

Of course, it pays to be a smart shopper, and to know what an item cost new, and what similar items are currently selling for -- but you can't really blame the sellers for a buyer's ignorance of what something's worth.

Hi and thanks for reading this posting. Get a great Christmas present for yourself! I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Source record: 66818

All I can tell you is "Welcome to the REAL world." This is not unlike any merchandising. When I was in advertising, a company had trouble selling their tools. Our suggestion was "Raise your price... people don't expect to buy GOOD tools for low prices." He doubled the prices and sales boomed.

Ever buy new furniture? It is commonly on sale for 40 percent off. The retailer actually takes the wholesale price, multiplies it by 260 percent, then "reduces" the price by 40 percent.

I went to the LP sales last week to have a gas bottle filled for my BarB Q and paid $12 for 4 gallons of LP. I asked the man if LP had gone up to $3 a gallon, and he said, "Well you can't expect us to fill one of these little bottles at the same rate as a 500 gallon tank!"

If these merchandising stories scare you, I won't even mention the used car sales business. Ebay sales are a bargain, compared to what you and I do as consumers every day. Welcome to LIFE in the REAL world.
Johnny

5944. Sony STR-AV570 receiver problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-30 16:26:09 UTC
From: Farmblo <farmers@ridgenet.net>
Message-ID: <92l28flud1@delphi.ridgenet.net>
Source record: 66824

I've got a Sony Audio/Video Control Center STR-AV570 that's causing me problems. When it's plugged in, there seems to be some power going through the system and it's causing a "clicking" sound, at about a 1Hz cycle, and the light above the mute button (-20 dB) comes on and off with the "clicking" - this is with the power button pushed off.

When I push the power button on, one of two things happen; first, it doesn't come on - it comes up with a red flashing "P" and doesn't work, or it works. More than not, I have to keep pushing the power button on / off numerous times for it to work. Or I get frustrated with it all and finally disconnect it and don't use the darn thing.

The other thing that happens, is when the tuner does work and I turn it off, the clicking sound is gone, but after a long time (ie hours), a loud popping sound comes from the speakers.

Help!! Any suggestions would be greatly appreciated. Please respond to me via my e-mail address.

E-Bay is a bidding place and some people want things more than others. Look at the coin and stamp collectors. They pay lots more than face value for the old stuff just because thay want it. Some of the stamps are even unusable. One of the highest prices I know of was some canceled stamp that probably sold for under $ .05 new and was bid for in the millions. Suspose to be the only one of its kind.

The shure 444-D, black mic is a good one and can be used when an impedence such as that for a yaesu 920,990,1000, 726 etc. can be called for. It is a very good mic. and I have used one in the past with good results.

The shure 444 which is a silver\gray mic., is not as good and picks up a lot of 60 cycle noise etc.

I've had 3 or 4 occasions just this month to jump on some
fantastic deal mentioned on the newsgroups. Immediately hitting
the reply button isn't fast enough - its always already gone. One
guy was waiting for my answer which I gave him within 30 minutes.
Item was already sold.
I myself put an item on a newsgroup once and got no bites. So it
went to ebay and sold for nearly 4 times what I had offered it
for. Then two weeks later some guy inquires about it from the
group. I told him it was gone on ebay and had to endure a verbal
lashing for being a profiteer.
Go figger.

CQ magazine also reviewed the Pegasus in a lengthy 2-part interview,
in the July & August issues, year 2000.

The receiver was described as adequate for ordinary use, but it is not
a competition-grade receiver.

Guess it depends on what you are looking for...

Yup - if you want "competition-grade" performance it'll probably cost you more than $1189. The IMD products on the transmitter appear a little "marginal" as well. A really neat thing is that you can download firmware upgrades via the Internet and load them into the transceiver yourself. I wish they would design a model with better RF specs.

Greetings all, I have a nice Motorola standard rib box Motorola HT1000 and
MT2000
series jedi programing/test cable,X9000 Syntor series programming cable and
Saber series factory Motorola programing/test cable also home
brew Saber line programing cable and maxtrac/radius cable and HT600/MT1000,
STX series programing cable and lastly a Pro series ie:Ht750,1250,1550
series also spectra dash type programing cable comes with rib to computer cable
as well all work 100% will only sell as a entire package

$625.00 shipped prepaid US postal MO.
I do not wish to separate package so please do not ask!
Also do not bother asking for RSS for obvious license reasons.

You will certainly be able to program most current radios and HT's a excellent
low cost start to get you going.

Or will swap for a TS140S w/kenwood auto tuner HF rig and it
must be in excellent w/manual and power cord and mic shape even swap!
or a Alico DX70TH complete (preferred) and Shipped! Let me know what you have?

1. Remove top cover of rig.

2. Put bandswitch into 10 meter position.

3. Connect rig to 110 volts.

4. Connect dummy load to output connector.

5. Turn on final tube heaters and wait until they glow.

6. Lick your finger tips and while simultainously bringing 5 pound engineer's hammer down onto VFO (silver box in center of top of rig) with right hand, touch index and second finger of left hand to the tops of the final tubes.

7. Replace top cover on rig.

8. Enjoy your new 27 mhz rig, Good Buddy!

JB

Maybe you could go to their web site, and see if there is an email address for their service department, and they could fax you something. Otherwise, I'm not sure where you'd get a circuit diagram.

If your monitor is built for Compaq by another company, that may be another source -- I don't think Compaq builds their own monitors.

I'd agree with the hamfest analogy. You see a lot of weird stuff bought and sold at each. These days you need a "computer filter" for each. I don't find it all that hard to do at either one.

There is something about being able to pick up the item and look the guy in the eye. It's missing with eBay, and very much part of the deal at a Hamfest. Obviously if you are a seller this isn't as much an issue as if you are a buyer.

I make it a habit now of offering what I have for sale on the NG's and the Ham Classified Sites. If a week goes by and I don't get a decent offer, it goes to eBay!

Believe me, there ARE some decent deals to be found on eBay! About 6 months ago I ran across an Icom IC-706 and the bidding wasn't going so well. At that time the 706 was still bringing about $700. Bidding was at $300 with 3 days left. I have a habit of shooting off an e-mail to persons that have items up for sale with the bidding not going well, either due to poor auction ad layout, or otherwise. To make a long story short, I saw in this guys picture several other pieces of equipment. I shot him off an e-mail offering him $500, and asked what was included. He stated 'everything in the picture is included, I'm not sure what all of it is...' So, for $500 I got the Icom IC-706 (original version), seperation kit and remote mounting bracket, Icom PS-15 20 amp power supply, and an Icom SP-20 filtered speaker (which in and of itself is bringing $150-$175 on eBay these days, just for the speaker...)

Just one of those lucky days, I guess. :)

Might be the supply, might not be. There's many components in there which
can emit RF on amateur bands, many newer versions of components have failed
to correct the problem even though it's been there for some time. I have a
PC in the shack which is only a couple of years old and it still causes
noticeable problems on 146 MHz.

And yes, moving the receiving equipment away from the source of the noise is
one of the primary recommendations of the FCC for handling RFI, and a good
place to start.

Try http://www.galls.com/index.jsp

These guys sell police/fire dept/ambulance racks for radios. I used to
buy from them when I was supply officer for a rescue squad.

Wayne Faris, KEï¿½BZ

u have a box full of wonderful connectors for a great
amateur, i will ship the whole lot for 35.00US "international
postal check"

(19) twist on BNC male connectors rg-6 type
(4) BNC male to 2females 'T' connectors
(4) BNC male to UHF female connectors
(3) BNC female to BNC female barrel connectors
(2) UHF male to 2UHF female 'T' connectors
(4) BNC male to RCA female connectors
(2) RCA male to BNC female connectors
(1) UHF male to BNC female connector
(1) UHF female to UHF female barrel connector
(1) UHF female to UHF female barrel connector (2"long)
(1) UHF pl-259 connector

all are in perfect shape, the twist on BNCs where never used
I will pay the shipping, this is less than $1.00 each.

thanks

i have for sale 2 antenna rotors:

both radioshack and heavyduty

one model "archer" 15-1225 has rotating dial takes 3 conductor low voltage cable, mast fits into the rotator.

one model "superior " 15-1220 has 2 red lights for direction takes 5 conductor low voltage cable, mast goes right through the rotator.

both are used but work very well.
i would like $30.00US each and i will cover shipping via-US Postal service.

"international postal checks in advance please"

joe
Toronto, Canada

5998. power supply question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-12-31 23:57:53 UTC
From: Steve Woodruff <sjwoodr.nospam@nospam.email.com>
Message-ID: <92oh4k$4n4$1@flood.xnet.com>
Source record: 66725

Hopefully a simple question -- what are the major differences
(and pro's and con's) of switching power supplies versus the
traditional ones? Seems the switching ones are much lighter,
but that's all i've been able to discern.

--steve
